No, actually. By a bunch of people who work at a station of different ages
and both men and women. Each listend to an a ssortment of typical analog
receivers as the IBOC and analog was A/B switched. We are talking about
average consumer radios. And there were as many who liked the narrower
bandwidth as those who like the NRSC bandwidth; most did nt hear any
difference.

Proving it pays to have a good engineer. Nothing else.

> If AM stations really think that nobody is listening to them with

It just takes different adjustments. And on most receivers, by test,
indistinguishable.

C'mon, Sven, you know more boxes means better sound. A syndicator in the 70s created a magic box whose innards were so secret they were hermetically sealed. Everyone agreed it made a dramatic improvement in the sound if you installed the box and removed all other processing, except a limiter.

Someone committed a crime nearly as serious as ripping the do not remove label off a mattress and opened the box, broke apart the sealant and discovered two wires that connected the input to the output. I think the AC supply simply lit a pilot light.

Its only purpose was to inspire the removal of all the smashers and mashers in the line.

I used to hear mostly music on 640 out of Havana (CMQ?)

However, the last time I was anywhere near Cuba (Puerto Rico in late
2001), I couldn't hear anything from Cuba, on any frequency. Not even
a Radio Reloj clock tick....(Venezuela, on the other hand....)

I have a 4VEH QSL, back from 1979 (of course this was when they were
on shortwave). Mostly block religious programming from the States, if
I recall correctly (and no, I didn't hear Haiti on MW from P.R. either)

That's when you'll see all hell break loose - when major market 50kw
stations find the 1kw stations stealing their salable near fringe
signals.

>But CDs still cost more than cassettes, even though they are far
>cheaper to manufacture. And don't expect an HD Radio Walkman any time

It's difficult enough to listen to a highly processed signal in
headsets. I can only imagine the torture we'd endure with IBOC.

>And most listeners never call a radio station for any reason. Many
>times when a station is off the air, is transmitting dead air, or has
>other obvious problems, nobody calls.

Actually, the calls generally come from the owner who insists that the
station make an announcement that they're off the air.

Certainly not in my experience! The stations I've heard running IBOC
sound noticeably inferior to those not running it, even on a
narrowband receiver. It also seems to me that the interference
issues are not trivial, and interference from IBOC does affect the
primary service areas of adjacent channel stations, at least in some
cases. And the whole nighttime issue is a major problem.

Let's face it -- AM IBOC is a kludge. It's a very technically
impressive kludge, but a kludge nonetheless. It creates bigger
problems than it solves. If AM can't survive without this, then AM
probably can't survive. And maybe in the 21st century, it shouldn't.
Maybe we're trying to make a horse-and-buggy compete with the
automobile by putting the horse on steroids. It won't make the horse
fast enough, and it will be harmful to his health.

Next time I'm in L.A. I'll have to check out KTNQ. However, the Delco
AM stereo tuner in my car is not narrowband.

Don't you have a sense of smell? I don't think there's a way to be
absolutely accurate in traffic reporting. I can't count the number of
times I've been returning to New York from a camping trip listening to
one of the all news stations and being told it's backed up for miles
as I breeze along at 65 (being passed by everyone else).

The converse has often been true. Everything is reported as clear as
we sit in bumper to bumper traffic long enough to wish we hadn't had
those last 3 cups of coffee or took the advice of that lady whose
husband is constipated.

Another traffic problem indicator is thick black smoke ahead. You can
assume you be communing with your car for an extended period. Yet
another nighttime clue is miles and miles of red lights ahead of you
that don't seem to be moving forward.

I now live in Western Massachusetts and have no hope during the day of
being told there's a flaming tanker truck heading my way. There's no
all news station and no one dares break away from Rush Limbaugh except
to run a few drug commercials.

I've found the absolute best traffic info comes from Ham Radio
operators chatting on repeaters as they watch their cars boil over.
Get a simple scanner and program the local 2 meter repeaters into it.
Most of the usual conversation is about gout and medical problems
until traffic takes over. It hasn't failed me, yet. As a Ham myself it
has the added advantage of providing me with local directions. Hams
are great people always willing to help even with something as simple
as finding the local carbohydrate palace.

>Listen to channel 19 on the old CB radio ??? <lol>

Won't work. You'd be disrupting the search for hookers at truck stops.

CB Chan 19 is probably the best solution. Broadcast traffic reports hardly
ever helped me.

I knew this would eventually happen. You and I usually agree on most
things. With IBOC we part company. I'm not ready to accept improved
degradation.

I've heard the New York IBOC stations both on analog and IBOC
receivers. It was annoying as hell. Now that I'm at a distance where
their signals don't overload my receiver I can hear the adjacent hash
on every AM receiver I own.

15. Blue, Red, Yellow, or Green? (AM pre-emphasis survey)

Newsgroup: rec.radio.broadcasting
Date: 2004-01-02 17:41:55 UTC
From: wbrw@radiomailbox.com
Message-ID: <bt4ah3$b4e$1@xuxa.iecc.com>
Source record: 6354
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

Okay, time for a little unofficial survey -- for those of you who engineer AM stations, how much pre-emphasis do you use?

In the late '80s, the NRSC established a standard "modified 75 uS" AM pre-emphasis curve, but the FCC never officially made its use a requirement, except for AM Stereo stations. And today, it seems that most AM stations are using a higher amount of pre-emphasis -- even many AM Stereo stations.

In fact, the Optimod 9100B offers four different pre-emphasis curves: "Blue", "Red", "Yellow", and "Green". "Blue" is the NRSC curve, while the others provide increased amounts of high-frequency boost. The "Green" curve can be maxed out to provide over _twice_ as much pre-emphasis as the NRSC curve!

The mono Optimod 9200 offers a similarly wide choice of pre-emphasis curves, and in fact, it comes shipped from the factory with a default setting which exceeds the NRSC curve by up to 3 dB at mid-range frequencies (~4 kHz).

The result of this variation, combined with the overwhelming predominance of Optimod processors on the AM band, is that we're basically back to square one, before the NRSC standards were created. Some AM stations sound dull and muddy, while others sound tinny and shrill -- and you don't even need a "wideband" receiver to hear the difference.

Over the decades, adjacent-channel interference is the number-one complaint which has led to almost universally narrow-bandwidth, low-fidelity AM receivers. But Optimod-ized AM broadcasters are only aggravating this problem by using extreme amounts of pre-emphasis.

And now, IBOC proponents want to "solve" this problem by chopping off everything above 5 kHz. They even claim analog AM radio will sound _better_ as a result, because receivers can be opened up to 5 kHz bandwidth, as compared to the 2 - 3 kHz they typically offer today. But says who? The hundreds of pages of iBiquity, NRSC, and FCC documentation I have read make absolutely _no_ mention of what kind of pre-emphasis, if any, IBOC stations should use, or how much bandwidth the analog portion of IBOC receivers should provide.

Meanwhile, the Omnia 4.5 AM audio processor curiously appears to offer no user choice of pre-emphasis. It does offer a choice of 4, 6, or 10 kHz audio bandwidth, but the user's manual makes no mention of pre-emphasis at all. I guess Omnia chose a curve that "sounds good"

to them, and that's that?

16. Radio review webpages.

When it comes to seeking reviews of worldband receivers there are several excellent sites.

But what is the situation when one is looking for reveiws of non-worldband radios? Radios that only cover LW, MW and FM? It seems that this catagory of radio does not attract the same attention when it comes to reviews.

Can anybody direct me to any review pages where I can find articles on these non-worldband radios?

TIA.

(Replies/Followups will go to rec.radio.broadcasting).

Rich - I've got the scoop on traffic reporting and other "breaking news" items on broadcasting....in many cases, they're bogus.

Traffic reporting, as I've seen, experienced and even participated in, is often so old that if you take the advice to avoid a backup, you'll often end up just adding time and distance to your trip, since the cause of the backup and most of the backup itself is already gone by the time you hear the report on the radio. The whole reason why traffic reports exist on radio is to make it seem that you're getting up-to-the-minute reports, and since the majority of the roads covered aren't used by a specific commuter (how could it be otherwise) there's no way that individual listeners can check on how accurate the reports really are, and when the alleged backup on the road travlled seems to have evaporated, said listener simply thinks they got lucky that time.

"Breaking news" is often as much as 6 hours old, with the major actor(s) already apprehended or otherwise dealt with. And, as often as not, the newspaper story the next day will have the actual story, whereas the field reporter, being so far from reliable sources of information, will have gotten it wrong in the live shot, breathlessly intro'ed by the blowdried anchor whose closest encounter with a real news event was the time he was at the Orlando airport when a plane went down....in Europe.

Yeah, I'm being snide. But these days, with localism all but gone in American radio, it really is mostly smoke and mirrors. I'll admit that with the trafficams going up in various major cities it may be easier for the information to be accurate and timely, but without these tools, you might just as well have a field reporter (or DJ aspirant...it seems the job of traffic reporter is often filled by failed jocks) call in to the station while the sound effect of a helicopter plays in the background. (And I hope I haven't revealed any trade secrets!)

Hello,
I have a fanclub website that might be of interest to fans of old movies. Many of you are, I sure, familiar with Joe franklin. His TV show ran for 40 years and his radio show "Memory Lane" can still be heard on Saturday at midnight until 5AM on WOR radio (NYC) 710AM. I have become very good friends with Joe and also appear on the show. The fanclub is free and contains many photos, music, and tons of links to websites relating to old film, entertainers and nostalgia in general. It is part of Yahoo groups and can be reached at this link:
http://groups.yahoo.com/group/JoeFranklinFanClub/
Sincerely,
Paul K Eversman

19. For sale: Partial ownership in radio stations. AM and FM.

For sale:

Partial ownership in radio stations. Both AM and FM.
All over the place!

Joint venture.

Active or inactive investors with at least $10,000
each are welcome. All investors would be on the board
with full voting rights if desired. As a matter of
protection to all concerned, no individual may own
over 49 percent. That rule applies to me too!

The "Radio Crazy" is baaaaaaaak!!!! Hi!

My tel. in Macon, GA is (478)741-1710.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Reception of Cuba in Puerto Rico is quite hard. One is about 800 to 900 miles from the major transmitters, and N/S propagation in the tropics eems to cover greater distances on MW than E/W. At least, that is my impression from living in the tropics for over 30 years.

> I have a 4VEH QSL, back from 1979 (of course this was when they were

In my time living in PR and DXing, I rarely heard a Haitian, and those that did come in were the long gone split frequency ones at 1035, 1285 and 1325 (if I remember right)/ There was also a low-power at 1145, but very hard to get even in PR.

It's traditional in the radio biz to NOT tip off anyone to major changes.
As a layman, I can only surmise some reasons for doing this -- one, they
don't want the staff to know, lest they bail out before their firing day,
or end up with a competitor before the format change, or worst of all,
organize campaigns to keep their jobs. There is also the concern that they
might do something on air before their termination; then again, if someone
did, it would lead to publicity for the station, which they might welcome.
It's a strange game, that radio biz.....

> When
> people tuned in for the morning show the next day, there were two guys
> who didn't know what the heck was going on fielding calls from
> confused and irate listeners

There was an instance where a local AM station fired the afternoon DJ / talk
show host in the MIDDLE OF HER SHIFT!!!!! She did a drive time DJ stint
from 3-6, then there was a break for news, and she normally did a talk
show from 6:15-7:30. She was promo'ing her talk segment, including
blurbs about an author who was going to be interviewed. When the news
ended, there was a satellator show on from Baltimore. How to handle the
calls? The station took the phone off the hook! (Very courageous move).

I suspect it may be a problem in the STL. Or possibly a processor that they
are monitoring "in front of"... I can't imagine the sales droids not
mentioning it to the technical staff, however. When it is bad, it is dreadful
sounding. Almost like overmod, but without the loudness. Something is
clipping when it shouldn't be.

25. Optimod 8200 distortion problem

Newsgroup: rec.radio.broadcasting
Date: 2004-01-02 17:42:18 UTC
From: cabbott@kbga.org
Message-ID: <bt4ahq$bb0$1@xuxa.iecc.com>
Source record: 6364

I apologize to anyone if the questions I am about to ask sound stupid.

I work for a small college radio station in Missoula, MT USA. I ended up being the assistant engineer - our contract engineer is very busy, because he works for Fisher Communications.

Recently we lost our Optimod 8200 to some major power spike, so we had it sent in and repaired. During the repair we had it upgraded from the 1.2 software to 3.0 and 5 bands rather than 2. Public radio bailed us out with one of their backups while our processor was being repaired.

We got it back and installed it using the quick setup. I started to notice really bad distortion on program peaks in the low range - below 200 hz kicks.
The first kick on say some hiphop track would "suprise" the optimod and distort. When it adjusts for this kick, anything after the kick is not distorted.
I check the output on the board and found it was running at 1.23v - I brought it down to .775v and I still have the same problems.

I use the default presets built into it - first rock open, then urban/rap-dense.
I turned up the bass coupling a bit, and turn the bass boost completely off, and the distortion became very minimal.
Would this be because the source is being distorted, and the optimod is emphasizing the distortion?

Also I checked the input vs the output with the i/o meters - showing the input float around -7 on most material, and the output of course at 0, and composite at 100%.

We use analog inputs
going from the board, it passes through a delay (I verified this is not causing the distortion at all), then through a Sage EAS Endac, then on to the optimod.

I've gone through quick setup tons of times with no luck (I am obviously doing something wrong).

The board is calibrated so at exactly 0db on the VU meters with a +4db tone input it outputs .775 volts or 0db. In the I/O Calib screen given this information what should I set the A-I Clip LNL dBu, and the A-I Ref LVL dBu?

Should the urban/rap-dense cause distortion by default?

Also an off-subject question:
Does the default classical setting utilize the 5 bands, or will it switch to 2 bands?

I appreciate any help anybody can offer - I'm sure I probably sound like a complete fool above this, but I'm trying as hard as I can to get this station sounding good.
I've read the manual to the optimod like 3 times hehe

If you want to contact me on aim, or icq or email...

cabbott@kbga.org

Why the confusion? The flagship station of the WOR Radio Network
doesn't carry one of the programs it distributes to its other
affiliates. There's nothing unusual, or sinister, about that.

Hi Kevin,

I don't know anything about the Optimod 9100B, do you know what the various curves look like? It would surprise me if they simply added more and more "preemphasis". IIRC, and of course I may not, the original Optimod 9000 had separate equalization controls for peaking the area around 3,500 Hz where the typical AM radio is rolling off, and a separate control for the higher frequencies up to 10 kHz or so. If I remember it correctly, the idea was to be able to boost the frequencies that would help the typical radio the most, without overdoing it at the higher frequencies, and causing problems by boosting frequencies that weren't going to be heard anyway, except on a minuscule number of radios. I wonder if the four different colors don't mainly provide different amounts of peaking in that mid frequency area where most radios need some help?

> The mono Optimod 9200 offers a similarly wide choice of pre-emphasis
> curves, and in fact, it comes shipped from the factory with a default
> setting which exceeds the NRSC curve by up to 3 dB at mid-range
> frequencies (~4 kHz).

If I follow you, this midrange boost is consistent with the equalization in the Optimod 9000, and what I would guess the colors might do in the Optimod 9100B, i.e. provide midrange boost beyond the NRSC curve.

> The result of this variation, combined with the overwhelming

I assume that's the intention, the optional mid range boost is there to
help the typical radio.

> Over the decades, adjacent-channel interference is the number-one
> complaint which has led to almost universally narrow-bandwidth,
> low-fidelity AM receivers. But Optimod-ized AM broadcasters are only
> aggravating this problem by using extreme amounts of pre-emphasis.

I wonder if it is "extreme amounts of pre-emphasis", or just the extra
midrange range hump in the 3.5 to 4 kHz area that you are hearing?

Why not just equip your radio with a complimentary four color equalizer switch?

Well, here in the US there are only a small handful of them that are any
good at all. There's the GE Superradio, and the Henry Kloss gadget and
that is about it these days. Unless you are talking about devices intended
for special purposes, like the Magnum Dynalab tuners or modulation monitors.

>Can anybody direct me to any review pages where I can find articles on

Can you still get the Roberts radios in the UK? They used to have at least
acceptable RF stages.

My limited experience (3-day business trip to San Juan) seems to bear
this out....I picked up the Bahamas and the Virgin Islands relatively
clearly during the day, but after dark, Venezuelan stations stomped
all over everything. I don't recall even hearing PJB 800 on Bonaire....

You're right about the sound, but their studios are at the transmitter.
Other local engineers have mentioned it to their engineer, but no
change. Perhaps management just doesn't care, or won't spend the money.

While I think you're being too harsh with blown-dry anchors (there's
an entire hairdressing and makeup industry at stake) I would
occasionally listen to my NYC precinct's frequency. I was amazed often
at how quickly the police apprehended the person they were after. It
was old news before it got to be news.

In my new market we have an anchor who must be the wife of the owner.
She looks as though she just rolled out of bed. I can only imagine
what the show looks like in HDTV where Bondo as makeup no longer
works.

> I don't know anything about the Optimod 9100B, do you know what the
> various curves look like?

The graph is a bit messy, but here are the 9100B's pre-emphasis
curves:

http://ourworld.compuserve.com/homepages/kevtronics/opt-emph.gif

The "Red", "Yellow", and "Green" curves are all continuously variable
from 0 dB (flat) to a maximum of 22 dB boost (at 10 kHz). This graph
shows what each of these three curves look like at boost values of 5,
10, 15, and 20 dB. Meanwhile, the "Blue" NRSC curve maxes out at a
boost of 10 dB, as shown, which meets the NRSC pre-emphasis standard
exactly.

The Optimod 9200's factory-configured pre-emphasis is equivalent to
the "Red" curve at 10 dB boost -- in other words, the first curve on
the graph above the NRSC curve.

> I wonder if it is "extreme amounts of pre-emphasis", or just the extra
> midrange range hump in the 3.5 to 4 kHz area that you are hearing?

The amount of increased boost extends all the way to 10 kHz,
regardless of which non-NRSC curve is selected, so even the higher
frequencies (which only "wideband" receivers can fully discern) are
increased as well.

> Why not just equip your radio with a complimentary four color equalizer
> switch?

Because I shouldn't have to. FM radio, TV audio, phono records, audio
tapes, and even CDs all use standardized pre-emphasis curves, with no
user interaction required. Why should AM radio be the same? Canada
made the complete NRSC standards, including pre-emphasis, mandatory
for all of its AM stations in 1988. But the FCC chose to keep the
NRSC standards "voluntary" in the USA, except for a rather lenient RF
spectrum occupancy mask which effectively limits transmitted bandwidth
to +/- 10 kHz (but yet has allowed the disastrous +/- 15 kHz IBOC
system to be used, since its sidebands conform to this RF mask which
was never intended to accomodate digital signals).

The primary goal of the NRSC was to encourage the manufacture of
high-quality AM receivers, by reducing adjacent-channel interference
and providing a "level playing field" of how AM stations broadcast
their signal. Today, unfortunately, these high-quality receivers may
be few and far between, but that does _not_ mean that this kind of

"every man for himself (or station for itself)" attitude should prevail!

p.s. One correction: The Omnia 4.5AM processor does indeed provide pre-emphasis that conforms to the NRSC curve. However, if desired, the user may provide extra mid-range or treble boost by using the EQ controls.

> Listen to channel 19 on the old CB radio ??? <lol>

Of course I'm no more 'locked into' a Sirius music stream than if I were listening to any other station that doesn't report on the particular road I'm riding.

I'm in dairy country, so the sniff test is not a reliable indicator of oncoming sewage sludge. There'd be too many false positives. Likewise with a couple of little kids in the car.

In a rural area, the local dial is good for a whiff of nostalgia, rather than for actionable information on the road. Visiting NYC, traffic reports can be used skillfully. Presets for traffic on the ones, fives and eights, and I bounce from report to report to choose among competing routes.

Telematics is one of satellite radio's killer apps. I expect that in a couple of years satellite receivers will be receiving traffic and weather information text encoded from all over the country. Subscribers, having previously punched in the routes and zones they're interested in, will obtain that information on the road via synthesized voice over the music bed.

I'm not confused. I talk with The Dolans regularly. They're no longer
with WOR. They're concentrating on CNN.

If the flagship doesn't carry its own network shows it's very
difficult to affiliate those shows. Many PDs feel if it's not good
enough to be on your flagship, why should I take it?

When I was running the WOR Radio Network every show but one weekend
food show was also on WOR, New York.

I would really doubt the Bahamas during the day.

the two Bahamian AMs are on 810 and 1540. Puerto Rico has a 50 kw on 810 and
a smaller local on 1540 (which is impossible in San Juan due to strong 1520
and 1560 locals. The Bahamas are a very hard log in PR... nearly 800 miles
away.

Could what you heard be 780 out of Tortola, British Virgins? 10 kw, non-D.
Another that used to come in well outside San Juan was 800 in Bonaire when
they still ran 500 kw. No signal on north side of PR, though.

USVI stations on 1000 and 970 do make it OK daytime to San Juan,
particularly near the airport area.

Thanks for posting the curves. It is not completely clear to me which
ones go together in a family, but from what you are saying, it sounds like
the "color controls the high frequency boost at 10 kHz, and then there is
a separate "mid frequency" equalizer control that controls the bump in the
4 to 5 kHz area?

> The Optimod 9200's factory-configured pre-emphasis is equivalent to
> the "Red" curve at 10 dB boost -- in other words, the first curve on

That makes sense, if I have the right curve that is the one I would
probably choose, either that or one of the others in the group that ends
with 10 dB boost at 10 kHz.

Since when was this the case? The equalization for all these media is
adjusted on the source side to suit what the originator thinks is best.
Why should AM radio be any different?

> Why should AM radio be the same? Canada
> made the complete NRSC standards, including pre-emphasis, mandatory

> NRSC standards "voluntary" in the USA

The FCC doesn't even specify pre emphasis for FM except for a maximum that is allowed, but I don't even see why they bother with that, how can they enforce it, to really control it they would have to regulate the entire audio chain back to the original pickup microphone, and even the acoustics of the original performance venue.

AMs that cover small towns and rural areas, but which provide no local
programming and repeat only satellite programming are not providing
actual service.

Yes, there are some small AM stations that actually have local programming
and which provide a real service to the local community, but these are sadly
in the minority and that minority continues shrinking fast.

There are many stations in metro areas that have signals that are so
directional they cover only one side of some streets! Often, these don't
cover any cohesive area, and are simply inadequate for any purpose.

Other stations are so limited in power, or so directional at night they
serve no useful purpose.

Stations with low power can serve small communities. But defective signals
in metro areas are generally not doing anyone any good.

Cleaning out the band selectively might enable some rural stations to g
fulltime usefully, or some metro signals to cover the entire market by
losening the protection requirementos .

> 4 to 5 kHz area?

The color (Blue, Red, Yellow, or Green) determines the shape of the
pre-emphasis curve, and the user can also select the total maximum
boost (at 10 kHz) to be applied. The Optimod 9100B does not provide
any other audio tone/equalizer controls, except for an optional bass
boost feature.

The 9100B's total audio bandwidth can also be adjusted, of course.
With no "brick wall" filter enabled, it provides a maximum audio
bandwidth of about 12 kHz. Western Hemisphere models can select
either a 5 or 10 kHz filter. European and Asian models have a choice
of a 4.5, 5, 5.5, or 6 kHz filter.

Meanwhile, the mono Optimod 9200's bandwidth is continuously variable
(in 0.5 kHz steps) from 4.5 to 9.5 kHz, and it offers a range of
pre-emphasis curves and boosts very similar to the 9100B's.

> Since when was this the case? The equalization for all these media is
> adjusted on the source side to suit what the originator thinks is best.
> Why should AM radio be any different?

Because there has to be a level playing field. Why do you think the
RIAA curve for phonograph records was established? Because there was
too much variance and too much confusion, and it was inhibiting the
goal of providing the consumer with increased fidelity and
convenience.

This also applies to AM radio. Whether it be today's 10 kHz or the 5
kHz that IBOC proponents want, consumers will never get to experience
analog AM radio at its full fidelity unless there is a level playing
field and a universal standard which manufacturers can design their
receivers to meet.

Amateur Radio Newsline Report 1377 January 2, 2004

Amateur Radio Newsline report number 1377 with a release date of Friday, January 2, 2004 to follow in 5-4-3-2-1.

The following is a QST. V-K hams welcome 2004 with new spectrum. P-29 hams enter the new year with no-code and the FCC ends 2003 embracing smart radios. All this and more on Amateur Radio Newsline report number 1377 for the first week of 2004 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: EXCLUSIVE SPECTRUM DOWN UNDER

Hams in Australia start 2004 with an unexpected gift. Some exclusive spectrum in the 75 meter band. From Brisbane here's Q-News Graham Kemp, VK4BB, with the rest of the story:

--

As of January 1st amateur radio operators in Australia have gained exclusive access to 24 kHz of HF spectrum at 3776-3800 kHz for high frequency amateur radio communications between continents.

The new Australian spectrum allocation for the amateur service is made under footnote AUS8 of the Australian Radiofrequency Spectrum Plan 2002 published by the ACA. It aligns well with international arrangements, which means intercontinental communications for Australian amateur radio operators will be improved at these frequencies.

This domestic change has affected other spectrum users. More than 40 government bodies, community groups and commercial organizations were previously licensed for HF communications within this 24 kHz of spectrum, with amateur operators having lower priority access to 6 kHz.

For Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

A very nice way to start the year 2004. (Q-News)

**

RESTRUCTURING: P29Z CALLS GIVEN HF GIFT

Australia is not the only nation in the Southern hemisphere to have some ham radio rules changes with the new year. A report out of Papua New Guinea says that the tiny nations has welcomed 2004 by going no-code.

According to Rick Warnett, P29KFS, in Port Morsby, the nations telecommunications regulator PANGTEL has issued an opinion confirming that P-N-G hams holding a Limited Amateur Operator's Certificate of Proficiency now have access to all High Frequency bands granted by PANGTEL. As a result, from 0000 P-N-G time on December 31st hams assigned P29Z series calls have full High Frequency access in the ham bands from 165 KHz thru 28MHz in addition to their 430 MHz to the multi Ghz allocation. (Q-News)

**

RESCUE RADIO: IRELAND PREPARES FOR POWER OUTAGES

Meantime on the other side of the world, what amounts to a mini Field Day exercise took place in Ireland December 6th and 7th. This when that nations ham radio rescue service known as AREN took part in a twenty-four hour simulated test to help prepare members for a possible power failure such as those experienced recently in the US and in the United Kingdom.

The test had several goals. Among them was to establish that AREN members could operate without mains power and to have members ready for activation during a sustained standby period. Also important was maintaining discipline by politely and firmly holding control of a working frequency for the duration of the exercise.

According to assessment reports, the AREN members demonstrated a keen and effective will to efficiently operate such a service. They also held the primary exercise frequency of 3.660 MHz without incident for the duration of the watch period. (IRTS)

**

RADIO LAW: S.C. INDICTMENT IN BPL RELATED SCHEME

Back here at home, it looks as if the first scam associated with Broadband over Powerline technology has surfaced. Amateur Radio Newsline's Jim Davis, W2JKD, tells us the who, the what, the why and the where:

--

News reports say that two Texas businessmen have been indicted on wire fraud and money laundering charges. This in a scheme that defrauded a South Carolina electric utility out of $1 million.

Prosecutors in Columbia, South Carolina say that the two convinced the utility to invest the money in research they said would allow voice,

video and data to be sent to homes and businesses through power lines. According to the documents filed on Thursday, December 18th, the could not deliver on the promises they had made.

Jim Davis, W2JKD, reporting.

--

No trial date has been announced in this case. (Published news reports)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southern California Amateur Transmitting Society serving West Covina California.

(5 sec pause here)

**

THE CHANGING OF THE GUARD: Joe Knight, W5PDY, - S.K.

Some truly sad news to report. One of the nicest people ever to hold a ham radio license, Joe Knight, W5PDY, the recently retired New Mexico ARRL Section Manager, died on December 28th. Knight was in declining health when he passed away in Albuquerque at age 76.

For those not aware, Joe Knight held the honor of the longest tenure of any Section Manager in history. He was elected to the post in the mid 1970's and only stepped down last July after his health began to fail. In all he served as New Mexico Section Manager close to 27 years. A record never before matched.

Knight was the subject and chief narrator of an article, "The Luckiest Man Alive," which appeared in the January 2003 issue of QST Magazine. In it, Knight said that Amateur Radio will exist as long as there are people who love the art and science of communicating by radio. The article also outlined the vast emergency communication resources that Knight and hundreds of other dedicated volunteers built up over the years in New Mexico.

John Stuart, AC5ZO, the president of the Albuquerque DX Association, visited Knight on December 22nd. At that time Stuart presented Knight with an honorary membership certificate in that group.

Survivors include his wife, Lois, KC5CXO, who often accompanied Knight on his hamfest and convention visits and was a tireless recruiter for new ARRL members. (ARRL, W7AS, N7US, others)

**

CHANGING OF THE GUARD: Emmanuel G. Papandreas, W4SS, - S.K.

And former ARRL Southern Florida Section Emergency Coordinator, Emmanuel G. Papandreas, W4SS, of Lake Worth, passed away, Friday, December 26th at age 80. Manny as he was better was Southern Florida was SEC for 20 years. A record longer than any of his predecessors. And during his tenure, Papandreas oversaw the amateur emergency communications effort following Hurricane Andrew in 1992 including the staging area at the South Florida Fairgrounds in Palm Beach County.

W4SS was a life member of the West Palm Beach Amateur Radio Club and served numerous terms as President. He also taught amateur radio classes and was an ARRL Volunteer Examiner in Palm Beach county. And, over the years, W4SS was the recipient of many awards and honors from the South Florida agencies served by Amateur Radio. (WA4AW)

**

RADIO RULES: FCC OPENS SMART RADIO PROCEEDING

Turning to the regulatory scene, the FCC has adopted a Notice of Proposed Rulemaking and Order that sets out proposals and seeks comments on the uses and applications for "smart" radio systems. This, In light of the ever increasing demand for wireless transmitters.

Smart radios have the ability to adapt their use of spectrum to their environments. For example, a smart radio system could use geolocation and table lookups to determine whether certain frequencies are candidates for use in a particular area. Then, those frequencies could be scanned, idle spectrum identified, and the best frequencies and power levels selected for a particular link.

More is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242312A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-322A1.doc on the World-Wide-Web. (CGC, FCC)

**

ENFORCEMENT: YOU CAN FLY BUT YOU CAN'T USE THAT RADIO

The FCC has asked more groups representing hang glider enthusiasts to tell their members to stay off the ham bands unless they hold Amateur Radio licenses. The agency's Daryl Duckworth, N-N-Zero-W, has more details:

--

Audio report only. Hear it at www.arnewsline.org

--

Hang gliding zealots who fail to heed the FCC warning could face some pretty severe penalties. (FCC, RAIN)

**

ENFORCEMENT: COMPANY FINED $8,000 FOR FAILING TO PAINT TOWER CABLES

The FCC has issued an $8,000 fine against Tower Properties of Florida, Inc. for having unpainted cables attached to their tower structure. Cables that the regulatory agency says precluded good visibility of the orange and white aviation-painted structure.

Section 17.50 of the FCC's Rules provides that antenna structures such as this one that require painting will be cleaned or repainted as often as necessary to maintain good visibility. Further, as incorporated by reference, alternate bands of aviation orange and white are normally displayed on coaxial cable, conduits, and other cables attached to the face of a tower. (CGC, FCC)

**

COMMUNICATIONS LAW: JUDGE RULES ISP'S DO NOT HAVE TO PROVIDE INFO TO MUSIC INDUSTRY

Meantime, back here in the United States, a major setback for the music industry's anti-piracy campaign. This, a federal appeals rejects efforts by the music producers to compel the nation's Internet providers to identify subscribers accused of illegally distributing music on-line. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

It happened on Friday December 19th and it's being called a substantial setback for the entertainment industry. This, as a three-judge panel from the U.S. Court of Appeals for the District of Columbia overturned a ruling by the trial judge to enforce a copyright subpoena.

Earlier a trial judge had authorized the use of the subpoenas forcing Verizon Communications Inc. to turn over names and addresses for at least four Internet subscribers. Verizon complied but instructed its lawyers to challenges the ruling.

In its decision, the appeals court not only sided with Verizon. It went a step further. This, by declaring one of the crucial arguments used by the Recording Industry Association of America to obtain the original order as -- quote -- bordering upon the silly. The judges words-- not ours.

What does this mean to those artists and companies wanting to protect their intellectual copyright? It won't stop the entertainment industry from suing those who continue to swap music and video files peer to peer, but it will make them a lot harder for the industry lawyers to locate.

>From the entertainment capitol of the world, I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline

--

Its not known if the recording industry plans to appeal this latest decision against it to the U-S Supreme court. (Published news reports)

**

ON THE AIR: IOTA 40TH ANNIVERSARY AWARD

Turning to operating events, Don Field, G3XTT, wants to remind Islands on the Air Award enthusiasts and would-be enthusiasts that 2004 marks the 49th anniversary of this unique program. Don says that a set of files for downloading with lots more information are now available on the Chiltern DX Club website at www.cdxc.org.uk Just follow the IOTA 2004 links and remember this years award began on January 1st. (RSGB)

**

HAMFESTS AND CONVENTIONS: HAMFAIR NY IN FEBRUARY

And a reminder that Sunday, February 29th is the annual Long Island Hamfair and Electronics Show Winterfest sponsored by the Long Island Mobile Amateur Radio Club. The doors open 9:00 AM for buyers. Admission is $6 with children 11 and under welcome through the gate for free.

The location is Levittown Hall in Hicksville, New York. Complete directions are available on the Long Island Mobile Amateur Radio Club website at www.limarc.org/fest.htm (LIMARC)

**

HAMVENTION 2004: AWARD NOMINATING PERIOD CLOSES JANUARY 31ST

And the planners of Hamvention 2004 want to remind everyone that the nominating period for the Radio Amateur of the Year, Technical Excellence and Special Achievement awards program closes on January 31st.

There are three awards that will be given this year. The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. He or she is a well rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

Documentation is required. Magazine articles, newsletters, newspaper clippings, videos, and the like will better inform the Awards Committee of your candidate's accomplishments.

The nomination deadline is January 31st, All materials become the property of the Hamvention and cannot be returned.

You can fill out the on-line form and attach documentation files at www.hamvention.org. Then click your mouse on the words award nominations. Printed nominations and documentation go to the Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

Again, the deadline for all nominations is Saturday, January 31st. (Hamvention)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM RADIO IN SPACE: ARISS UPDATE

According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on board the International Space Station does not have time to read messages from the ham public and he advises against sending any. We have more in this report:

--

In letters posted to the SAREX remailer, Frank Bauer, KA3HDO, indicates that ham radio is lucky that the crew has been able to fire up the new Kenwood packet radio system that was recently delivered to the space outpost. He also says that its not a good idea for hams to send personal e-mails to the astro-hams indicating that they are really to busy to read and answer them.

As to the new radio itself, Bauer says that the unit is a Kenwood D700 that has been modified to support up to 25 watts maximum output. Normally, if the crew has the system configured with the default settings. This means about 10 watts out which is medium power on the 700.

Regarding the packet frequencies and why split channels rather than simplex is used, Bauer says this. 145.80 MHz is designated a human spaceflight downlink frequency. Right now it shares use on voice and packet for general operations and school group contacts. In the future it will be used at times for voice, packet, repeater capabilities, school group contacts and S-S-T-V. Because of this, the

ARISS team would like to keep the downlink frequency clear for all to hear and receive. Therefore, packet simplex is use not a good idea on this frequency.

I'm Bill Pasternak, WA6ITF

--

Meantime, Miles Man, WF1F, has posted some photos of the new station on his MAREX website. The URL is: http://www.marex.org/hardware.kenwood.html (SAREX BBS, WF1F)

**

EMERGING TECHNOLOGY: RADIO BRINGS FASTER FAST FOOD

On the emerging technology front, fast food has gotten even faster in southern California thanks to the magic of radio. This as five McDonald's restaurants sign a deal with a communications company to allow motorists to zip through the drive-through line without having to stop and pay cash for their food.

The trick is utilizing the same technology that permits motorists to skip stops on toll roads. A transponder will emit a signal to a receiver at the food giant that will automatically calculate the food the fee. The motorist is then billed. The process is said to cut 15 seconds off the normal 131 second-wait for delivery at the payment window. (Technology Corner)

**

INTERNATIONAL-ARGENTINA: ANDES MOUNTAIN LAND CROSSING

>From the international page, Carlos Beviglia, LU1BCE, says that between January 4 and 15th, the Radio Club Argentino will participate in the 6th Andes Mountains Land Crossing. LU1BCE is the Secretary of the Radio Club Argentino. He tells the Ohio Penn D-X newsletter that this trek is made every year to honor General San Martin and his army's crossing to Chile. This, during the American Independence War in 1817.

The Radio Club Argentino will provide the communication for the event. The club will set up two High Frequency stations at every camp point throughout the journey. Operation will be mainly on SSB and C-W using the special event call LS4M. QSL via LU4AA, either direct or via the bureau. (OPDX)

**

INTERNATIONAL-CANADA: MEET THE NEW RAC EXEC COMMITTEE

Meantime, to the North, word that Daniel Lamoureux VE2KA, has been elected as president of the Executive Committee of Radio Amateurs of Canada. This, for a 2004 through 2005 term. Also elected to the committee are First Vice President Robert Nash, VE3KZ; Vice President

of Regulatory Affairs James Deann, VE3IQ; Vice President Field Services and International Affairs Pierre Mainville, VA3PM, and Noel Marcil, VE2BR, as Secretary. (RAC)

**

INTRUDER WATCH: THOSE INDONESIANS AGAIN

On the Intruder Watch scene, we have some bad news and some good news. First the bad. VK6XW reports hearing 53 non ham stations on the 14 MHz band operating SSB. He says that most appear to be from Indonesia.

The good news? Word that another group of Indonesians who had been using 14.335 MHz have vanished and have not been found again. The same is true for the bunch on 14.252 which have also disappeared from the Amateur spectrum leaving only the 14.144 gang which have gone LSB and moved up to 14.145 Mhz. (Q-News)

**

SPECIAL EVENT: 50 YEARS A HAM

And you might call this one celebrating a personal best. This as Fort Wayne Indiana's Jack Forbing, K9LSB, takes to the air from March 1st to the 14th as K9L in celebration of his 50 years as a licensed operator.

Jack and his friends in the Hoosierland Amateur Mobile Systems group will operate all bands and all modes from K9LSB's home QTH. Equipment for the event will be a Yaesu FT-1000MP Mark V and a Yaesu FTV-1000 6 meter transverter into an yaggi at 65 feet. All other bands will use dipoles antennas. All QSL's go to K9LSB at his Callbook address. And we wish Jack a hearty well done on reaching this milestone in his ham radio career. (Via e-mail)

**

DX

In DX, 9V1DX, is now active as 9V0A from Ellsworth Mountain in Antarctica. He was spotted in 40 and 30 meters CW. Watch 7.001 or 10.108 MHz between 01:30 and 03:00 UTC. (OPDX)

And W4WX, will be active as KG4DX from Guantanamo Bay, Cuba, from January 13th to the 19th. He will operate the HF bands and 6 meters. QSL to his home call, direct with SASE. (OPDX)

Lastly, AP2JZB, was active recently from Pakistan on 17 and 12 meters SSB . Watch around 18.119 and 24.946 MHz between 13:30 and 15:00 U-T-C. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HAM RADIO HISTORY -- THE FIRST BIG REPEATER MEETING - PART I

And finally this week, many hams are not aware that back in the early 1970's repeater growth and continued experimentation in ham radio relay communication came to a screeching halt. This, as the result of overly restrictive regulations on the part of the FCC.

As most radio amateurs of that era knew, this was not a good time to be the owner of a repeater unless you also held an Electronics Engineering degree. Things had to change if F-M and repeaters were to grow again. In the end, one man risked it all to make it happen.

On January 24, 1974 then 73 Magazine publisher Wayne Green, W2NSD, brought a group of prominent "repeater people" before the FCC. He had arranged the meeting in an attempt to convince the Commissioners to roll back the restrictions put in place as a result of Docket 18803. Here's a sample of what that meeting sounded like:

--
Meeting audio sample
--

Want to hear more? Well, over the next several months you can take a trip back in time to join Wayne Green, W2NSD, former Colorado's Marshal Quiat, AG0X, New York's Howard Lester W2ODC and Dick McKay, K6VGP, from California. This, as they and others go to Washington D-C -- to -- quite literaly -- set repeaters free.

Part 1 of the audio of that meeting is on our website as a Newsline Extra. In it you will meet the hams who traveled to Washington to speak on behalf of the nations FM and repeater community. You will also hear some of the presentations made by them. Its on line now at our f-t-p site at www.arnewsline.org slash quincy.

This is literally a page out of ham radio's history. Its here -- right now for you -- exclusively -- on the Amateur Radio Newsline. (ARNewesline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying welcome to 2004, 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card,
letter, or e-mail to the station personnel, thanking them for going to
the trouble to run a test!

Sunday, January 11, 2004 - WKDK-1240, Newberry, SC will conduct a DX
test from 5:57-6:00am EST. The test will have the following format:

5:56 am EST carrier on
5:57 am EST 30 seconds of morse
5:57:30 sign on cart
5:59:30 earlier :30 of morse

Reception reports may be sent to:

Powell E. Way III
DX TEST coordinator
WKDK Radio
PO 753
Newberry, SC 29108

(Arranged by Powell E. Way III)

Also, if you hear a test, PLEASE, PLEASE let me know, via either
e-mail or in rec.radio.shortwave! And if you send a reception report
to
a station, please remember to include return postage with your
report...

Lynn.

Wanted:

Hey, for a change the "Radio Crazy" has a post that
has nothing to do with broadcasting! HI!

Seeking to buy a very rare version of the famous WW II
ARC-5 "command" transmitter.

I need the 1.3 to 2.1 Mhz version and will pay $200.00
plus shipping, no questions asked!

Only the following mods. are acceptable: (Any or all,
silly!)

a-Heaters rewired for 12.6 volts.
b-RF output connector changed to BNC or UHF.
c-Rear power socket changed to octal female or male.
d-Cathodes of 1625 finals brought out (To a jack or
whatever)

No dents or obvious signs of physical abuse. Normal
wear and tear of paint is okay.

Must have all tubes and the calibration crystal.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

63. Administrivia: Crafting a Group Charter...

Newsgroup: rec.radio.broadcasting
Date: 2004-01-06 23:56:04 UTC
From: Steven J Sobol <sjsobol@JustThe.net>
Message-ID: <btfhukaot1@xuxa.iecc.com>
Source record: 6302

I'm finally getting around to drafting a charter for the newsgroup and Digest. I occasionally get questions about what's appropriate to post here, and I believe a charter would be quite useful.

So I'm trying to decide what should be on-topic; and I want to include everything we talk about. I'm also looking for a one-line definition of what the group is about (heh, that oughtta be fun.)

So far, my on-topic list is:

*Discussion of broadcast technology
*Discussion of the radio industry
*For-sale or for-auction posts selling broadcast equipment
*For-sale or for-auction posts selling radio memorabilia
*For-sale or for-auction posts selling radio stations

*Periodic announcements of Internet broadcasts. Could be one-liners or more detailed posts like the ones we see from WCBN.

What should I add? And do y'all think we should include other stuff like shortwave and ham discussions in the on-topic list, or should we stick to the traditional AM and FM bands? (I do already post periodic newsletters from Amateur Radio Newsline.)

Discussion welcome in e-mail, but preferred here in the newsgroup/mailing list.

Love this newsgroup but don't see a need for the playlists we sometimes see
posted.
Otherwise, the on-topic list looks great.

I'd suggest looking over the (actual or de facto) charter
for the rec.antiques.radio+phono group, and making our charter
exclude antique consumer radio equipment.

Doesn't rrb already have a charter?

[Moderator's Note: Bill Pfeiffer may have had one at some time, but I've never seen it. To get the newsgroup accepted into rec.* which is part of Usenet's Big 8 hierarchy, it would have had to have a charter - if anyone can point me to one, I'd be happy to grab it.]

69. Bill's Charter frpm 1992

Newsgroup: rec.radio.broadcasting
Date: 2004-01-07 16:04:12 UTC
From: Tony Calguire <calguire@tcfreenet.org>
Message-ID: <bthals$45v$1@xuxa.iecc.com>
Source record: 6309

I found the following post in Google's Usenet archive. It wasn't very
hard to find. It was posted on may 1, 1992 to the group news.groups,
and it announces the successful vote for the creation of r.r.b.

Newsgroups:
news.announce.newgroups,news.groups,rec.radio.noncomm,rec.radio.shortwave,rec.radio.amateu
r.misc
From: wdp@gagme.chi.il.us (Bill Pfeiffer)
Subject: RESULT: rec.radio.broadcasting passes 234: 34
Message-ID: <1992May1.194903.16241@uunet.uu.net>
Followup-To: news.groups
Sender: tale@uunet.uu.net (David C Lawrence)
Organization: Gagme Public Access UNIX, Chicago, Illinois.
Date: Fri, 1 May 1992 19:49:03 GMT
Approved: tale@uunet.uu.net
Lines: 350

Voting on the proposed creation of rec.radio.broadcasting has
ended as of 4/30/92. The proposal received 234 yes votes
to 34 no votes, thus satisfying the Usenet criteria of both a 2/3
majority and 100 more yes votes than no votes, required for the
creation of this forum.

There were a few duplicate yes votes, which have been removed, no
switched votes, and a couple of no votes which did not strictly comply
with the voting guidelines, but were included anyway since intent
seemed clear.

CHARTER: Rec.radio broadcasting is intended as a worldwide forum
dedicated to discussion of subjects pertaining to 'domestic' radio
broadcasting. By the term 'domestic', we mean radio which is intended
basically for reception within the country from which it originates.
In other words any and all broadcasting which is not primarily intended
for
reception in other countries/continents.

Valid subjects might include (but not be limited to) ...

* Technical and engineering matters
* Programming and formats (such as.. but not limited to..)
* Music and entertainment
* News & talk shows
* Political coverage
* Specialized formats
* Legislation and regulations affecting the medium
* Technologies affecting the medium

* Ideas for improving radio broadcasting
* Differences and similatrities between nation's broadcast services
* Low-power radio broadcasting
* Community broadcast radio
* Pirate broadcasting
* Broadcast DX
* Radio's historical & cultural significance
* Information exchanges for those seeking employment in radio.
* Shop talk, gabfesting and general communications between broadcast professionals, hopefuls and listeners across the globe!

About the only traffic which is NOT welcome on this group is..

Flames and endless arguments over personal tastes in music/programming.
Unwarranted and excessive profanity and/or personal attacks.
Articles not pertaining to radio broadcasting. (*)
Articles about two-way, cellular, or other non-broadcast radio services,
unless they directly relate TO broadcasting. (*)

(*) - except matters of urgency to computer users, the public at-large, or other matters of great impact or importance.

While this WILL be a moderated forum, I will restate that I believe in minimal moderation and _NO_ censorhip! This means I will not kill any incoming articles because they clash with some personal opinion or belief. In other words, the ONLY reasons that an article might be killed
is if it falls into one of the above categories, or if it is one of many identical responses to a posters question. In the latter case, I would post a few of the identical responses and e-mail the remainder
to the poster requesting the information, giving a credit line to those who
posted, but were not printed. This is done to conserve net bandwidth.

So, without further adieu, here are the votes which came in over the past
month starting with the YES votes:

[LIST OF VOTERS SNIPPED]

After the 5 day waiting period, baring and 'serious' objection, rec.radio.broadcasting should be newgrouped and appear at your site.

If your site does not carry rec.* groups, contact me for information on direct posting, and possible e-mail distribution.

My e-mail address is wdp@airwaves.chi.il.us (William Pfeiffer)

Thanks to all who participated.

William

If Mel Karmizan finds out that ANYONE is streaming ANY of that show, they
will either stop streaming the show or stop carrying it at all.

It's against Viacom policy.

Who wants to listen to those crappy stations?

XM and Sirius are both launching traffic reports next month.

I am in the media. No one has ever questioned the appropriateness of me having a mobile receiver. In fact, I can easily justify it with any peace officer by telling the story of a deputy who bled to death when his gun went off by accident and he severed a leg artery. His partner did not know the groin pressure point and the man bled to death.

Had a scanner user with first aid training been nearby that deputy would still be alive.

I've been biting my lip for years about the posting of the WCBN playlists and ARRL scripts.

Now seems like a good time to suggest that these posts stop appearing on Airwaves. If the posters want to share the info, a URL to an independent site would be the courteous and appropriate method to do it.

WRT the rec.x issue, isn't Airwaves still parallel to rec.radio.broadcast? I knew it at least used to be, when Bill was still with us, but then I get the digest and haven't actually looked at usenet in years.

Thanks to all who have kept Bill's efforts alive. Can't believe it's been over four years since he's been gone.

I think such laws are stupid. However, they were lobbied for by law enforcement who believed criminals were tracking their movements and knew when they were about to arrive. They were also concerend that the media would monitor and interfere with their operation or expose something that shouldn't happen.

A "peace officer" doesn't make the rules. If he sees a receiver capable of receiving police and fire frequencies, he's supposed to take action in those states that forbid scanners in cars. The same is true for states that ban radar detectors.

With the no-code ham license an exemption is easy to get. Just show the cop your license and you're free to go. The next time a cop shoots himself, you'll be there to help.

There was a case in Cranford, NJ where a ham offered to help the police track down someone who was causing malicious interference to public safety services. They ended up charging him with doing it in spite of the fact that it continued while he was in custody. Charges were dropped after the ARRL assigned a lawyer (John Norton) to represent him.

In my experience in the NY/NJ area it's been the "peace officer" who is most against scanners. I wouldn't appeal to his "save my comrade" sensibilities.

Rich

I don't understand what the problem is. Can't you just choose
not to select those (clearly marked) articles for reading?

I just never read the WCBN playlist message.

I never even noticed the ARRL thing you're complaining about.
(I'll have to be on the lookout for it to see what it is, now.)

I don't object to solicitations for buying AM stations, either.
Although regular readers already know him, probably Meyer should
be putting ADV in his articles' subjects

Spam is really only a problem if it's overwhelming, or unmarked.

Nowadays cops use digital cellphones if they want to be secure from
the press.

I've never heard of anybody around here getting busted for having a
scanner. That sounds like crazy talk.

XM satellite radio has just announced that the MSNBC feed will be joining
its lineup on Feb. 1. Viacom has shut out satellite radio as well as the
Internet so far. Will XM have to find filler programming (or MSNBC feed
filler to XM) for the hours Imus airs on MSNBC?

The Radio Crazy ......it is baaaaaaak!!!! HI!

For sale: Partial ownership of nice AM radio station
in Roseburg, Oregon. KRNR. (Do not dare contact
directly!)

1 KW, fulltime, 1490 KHz. On the air since 1935.
Oldest station in the country. Roseburg is a city of
about 20,000 population and at least 80,000 people
reside in the daytime (.5 mv/meter) coverage area.

They are asking only $100,000 for the station WITHOUT
the real estate. We'd be expected to vacate in one
year and find new studio and tower site. I already
have a new tower site approved.

The station grossed an incredible $263,000 or so in
1999 and did almost 1/4 million in 2002.

Joint venture: Active or inactive investors with at
least $10,000 each are welcome. The first investor
ONLY may invest as little as $5,000. All investors
would be on the board with full voting rights if
desired. No investor (including me!) may own over 49
percent.

Please! No "AM bashers" or other negative nabobs.
Flamers will be sprayed with a fire extinguisher to
"put out the flames"!!! Hi!

Tel: (478)741-1710 in Macon, GA

I am NOT a broker, agent, shill, owner or part owner.
I also am NOT a crook.

References:
a-My parole officer. Mr. Larson E. Rapp. Sam Quitin,
CA
b-Brazilian Bandit Airways....Purchased a one-way
ticket to Rio from Atlanta, paying cash with small and
unmarked currency.

For sale:

Partial ownership of AM station in upstate NY. Small
and nice college town. Near Albany.

Daytimer, 1 KW, non-directional. PSA and 20 watts
nights.

Tower land included with 192 ft. tower and shelter
plus two transmitters.

Studios rented at $350.00/month with three years
remaining on lease.

At $120,000 asking price this is a "fire sale"!!!

(The "Radio Crazy" is baaaaaaaaaaaaak!)

Joint venture. Active or inactive investors with at
least $10,000 each are welcome. All investors would be
on the board with full voting rights if desired. No
individual can own more than 49 percent. This means
me!

Please! No "AM bashers" or other negative nabobs.

I am NOT a broker, agent, shill, owner or part owner.
It goes without saying that I am not a crook.

The MSNBC feed has been an exception right along, because technically, it's
not the Westwood One feed.

In fact, you can get it now in Windows Media, if you know where to look.
MSNBC doesn't publicize the stream.

Check with the ARRL. They'll quote you all the cities and states where the police wanted scanners and VHF and UHF ham radios banned in vehicles. Just because no one has been busted doesn't mean the laws aren't on the books.

I agree it's crazy talk, but from the police.

The New Jersey scanner law:

397. EQUIPPING MOTOR VEHICLES WITH RADIO RECEIVING SETS CAPABLE OF RECEIVING SIGNALS ON THE FREQUENCIES ALLOCATED FOR POLICE USE.

A person, not a police officer or peace officer, acting pursuant to his special duties, who equips a motor vehicle with a radio receiving set capable of receiving signals on the frequencies allocated for police use or knowingly uses a motor vehicle so equipped or who in any way knowingly interferes with the transmission of radio messages by the police without having first secured a permit to do so from the person authorized to issue such a permit by the local governing body or board of the city, town or village in which such person resides, or where such person resides outside of a city, or village in a county having a county police department by the board of supervisors of such county, is guilty of a misdemeanor, punishable by a fine not exceeding one thousand dollars, or imprisonment not exceeding six months, or both. Nothing in this section contained shall be construed to apply to any person who holds a valid amateur radio operator's license issued by the federal communications commission and who operates a duly licensed portable mobile transmitter and in connection therewith a receiver or receiving set on frequencies exclusively allocated by the federal communications commission to duly licensed radio amateurs.

Crazy talk, all right, but legal crazy talk.

I have a correction. The scanner law I posted was not New Jersey. It was New York State. Here's another from Florida;

FLORIDA STATUTES (1995) -
Title 46, CRIMES; Ch. 843, OBSTRUCTING JUSTICE; ? 843.16

843.16 Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined or a place established by munincipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages or signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal communications Commission or to affect any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any city, any county, the state, the Federal Bureau of Investigation, or the Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

Amateur Radio Newsline™ Report 1378 – January 9, 2004

Amateur Radio Newsline report number 1378 with a release date of Friday, January 9, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. V-K hams celebrate a new ham radio, some new Amateur Radio problems in Nepal, and Canadian hams learn that they may loose 220 to 22 MHz. All this and the latest in the war against B-P-L on Amateur Radio Newsline report number 1378 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: NO-CODE COMES TO VK-LAND

Major changes to ham radio in Australia were celebrated on the air on New Years Day. Q-News Graham Kemp, VK4BB, listened in and tells us what he heard:

--

When 1 January 2004 arrived, so to did a new era for Amateur Radio operators around Australia. At one minute past midnight, amidst the fireworks across Australia, Amateur Radio short wave frequencies lit up, too, as they celebrated the removal of a requirement for Morse Code qualification by getting on air in unprecedented numbers.

A quick scan through the 80 meter band during the first hour of the QSO party showed that there was standing room only with stations of all license levels participating eagerly in the party with some limited and novice limited stations handling high amounts of static and nearby station noise with considerable skill .

All states and territories activated special radio stations for the event. There were plenty of Wireless Institute of Australia stations on the air to help with the bonus contacts with VK5WI, VK6WIA, VK2WI, VK4WIG, VK4WIA and VK4WIT heard during the quick scan around 80 meters.

In the act, the Wireless Institute of Australia's club station VK1WI was activated from the home of their President, Alan Hawes. Way up north long time WIA supporter John Stevens took to the airwaves from the Townsville region.

As the morning wore on the stations operating were fewer but still at a level that veteran operators say rival the heydays of HF operating when Novice licensees were first able to access the HF bands.

>From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Still more changes to ham radio down-under is expected in the coming months. (Q-News)

**

RESTRUCTURING: NEW BANDS AND NO-CODE TO CROATIA

Croatia has become the first country in Region 1 to benefit from the expansion of the 40 metre band agreed at the World Radio Conference in Switzerland last summer. 9A amateurs have also been given privileges at 70 and 3,400 Mhz.

New amateur radio regulations came into effect in Croatia on the 26th of December. Since then, amateurs there may operate between 7,100 and 7,200 kHz on a Secondary basis, with a maximum power of 1,000 watts PEP, in addition to the normal Region 1 allocation of 7,000 to 7,100 kHz. On 4 metres, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3,400 and 3,410 MHz, with a maximum permitted power of 150 watts.

The Morse code requirement for an HF bands licence was also dropped with the new regulations and there are now only two licence classes there: the full licence and a beginners' licence.

I’m Jeramy Boot, G4NJH, in Nottingham England. (GB2RS)

**

RADIO POLITICS: HAM RADIO IN NEPAL

Some bad news about ham radio in Nepal. Charles Harpole, K4VUD, says that his efforts, along with those of 9N1AA, to expand ham radio in that nation and to establish a memorial club station for the late Father Marshall Moran, 9N1MM, are on an indefinite hold. This, due to the disturbed social and political conditions there.

Harpole says that all radios and other gear that was donated some years ago have been distributed to the currently licensed native 9 N hams. Harpole says that the gear will come back to a club station someday. Harpole asks that everyone bear with this situation and extend understanding. (OPDX)

**

SPECTRUM REALLOCATION: 220 - 222MHZ ON THE BLOCK IN CANADA

Canadian Amateurs may lose part of the 220 to 222 MHz in the 1 point 3 meter band. band. Thats the recommendation being made by the Radio Advisory Board of Canada to Industry Canada following an 18 month survey. Rick Johnson, KA9VZD, is in Antioch, Illinois, with more:

--
In a move reminiscent of the situation in the United Sates back in 1991, the 220 to 222 MHz band would be transferred away from Canada’s Amateur Radio operators and given to that nations Mobile Radio service. That’s the bad part. Here’s the good news. The Radio Advisory Board of Canada has

recommended that Amateur repeaters in this portion of the band be grandfathered to continue operation for a number of years. That time period would be decided by Industry Canada which is Canada’s radio and telecommunications regulator.

The Radio Advisory Board also recommended allocating 219 to 220 MHz to amateurs in Canada on a secondary, non-interfering basis. This says the R-A-B-C would put the band in agreement with a similar allocation now available to radio amateurs in the United States.

But here is where the Radio Advisory Board of Canada begins to think outside the proverbial box. While most administrations seems to frown on the idea of hams and non-hams sharing spectrum and talking with one another in a common allocation, Canada has other ideas.

The Radio Advisory Board wants a 150 kHz wide parcel in the reallocated band be designated as “Public Service Spectrum.” A small band to be shared by Canadian Amateur Radio operators and Canadian Mobile Services for special public safety and disaster communications applications. In other words, Canadian hams could talk with their non ham counterparts -- and vice versa -- in a disaster scenario.

Radio Amateurs of Canada, as a member of the Radio Advisory Board of Canada, has opposed any changes to the 220 to 222 MHz spectrum. Unfortunately, so far with very little success.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD, reporting.

--

Industry Canada must now take this advice and decide what it will do with 220 to 222 Mhz, and how soon. The full story is on the web at http://www.rac.ca/news/canada.htm (RAC)

THE BPL FIGHT: BPL INTERFERENCE PROVEN TWO-WAY

Two organizations have filed comments with the FCC that augment previously expressed worries about potential interference from and to Broadband over Power Line systems. One of them shows that service providers could loose a lot of income if anyone operates even a low power radio near a B-P-L transmission line. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--
Picking up on the what it terms as grave concerns expressed by the Federal

Emergency Management Agency over implementation of B-P-L on December 4, the nonprofit Disaster Preparedness and Emergency Response Association has called on the FCC to require impartial B-P-L field testing as well as additional public comment and full and open public hearings.

The ARRL Letter says that in comments to the FCC the Disaster Preparedness organization concluded that serious interference to and disruption of critical emergency communications systems in several licensed services throughout North America would almost certainly result from BPL implementation as currently proposed.

Endorsing earlier FEMA remarks, the group said that proposed B-P-L systems don't just pose a risk of interference. Rather, they have already been shown to actually cause harmful interference to licensed radio services.

Meanwhile, the Amateur Radio Research and Development Corporation has filed additional test data with the FCC. This, to support preliminary findings suggesting that BPL systems are susceptible to interference from even modest Amateur Radio HF signals. AMRAD said its newest data demonstrated that amateur operation in the test neighborhood would cause many homes to lose their Internet connectivity.

For its RF susceptibility experiment, AMRAD used the Potomac Electric Power Company system test site. It features a mid-1960s vintage home with unshielded interior electrical wiring and overhead power lines.

AMRAD's tests found that at a distance of just over one-half mile, data transfer ceased in the face of a signal from a mobile 100 watt transmitter on 3 point 980 MHz. When sited adjacent to the test property, AMRAD said data transfer went away in all but one instance at a transmitter power of just 4 watts operating in the proposed Broadband Over Powerline spectrum.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

What AMRAD has now done is to prove that interference with B-P-L will be a two way problem. More so for data providers who won't see much profit if something as simple as a 5 watt C-B radio can shut down a neighborhoods B-P-L operations. (ARRL)

**

THE BPL FIGHT: TAMPA TRIBUNE PRESENTS BOTH SIDES

An excellent article that details both sides of the B-P-L controversy appeared in the January 5th edition of the Tampa Tribune. In it, reporter Will Rodgers provides not only the industry side of the issue, but the ham radio side as well. The article can be read on-line at the cyberspace address in this weeks printed Amateur Radio Newsline report. You can read the article on-line at www.tampatrib.com/Business/mgalzo1pd.html (Via e-mail)

**

WITH THE FCC: CHAIRMAN POWELL PROMOTES A FREE MARKET TELECOM REVOLUTION

The chairman of the FCC is sending out a message that the migration to digital telecommunications will not falter. Michael Powell says that entrenched service providers such as telephone companies and cable television providers can either join the party or suffer the consequences.

In a December 29th interview with reporters and editors from the San Jose Mercury News, Michael Powell shared a number of personal views. At one point he stated the current migration to digital is really a simple thesis. One that says for the past 100 years we've had one kind of communications system. That being a system that's both analog and narrow band. And while it's the greatest machine ever built by mankind, it's also extremely mature, and it's really, in Powell's view, at the end of its innovation life.

Perhaps Powell's most controversial statement came in regard to companies that are not eager to invest in the digital revolution. He said -- quote: "I have no problem if a big and venerable company no longer exists tomorrow, as long as that value is transferred somewhere else in the economy."

You can read more of what FCC Chairman Powell had to say at www.siliconvalley.com/mld/siliconvalley/7591252.htm (CGC)

**

RADIO LAW: FCC STILL NOT "NAMING NAMES" IN ENFORCEMENT ISSUES

The FCC's decision to no longer identify those hams allegedly violating the Part 97 Amateur Rules continues into the new year. The agency's Daryl Duckworth, N-N-Zero-W, has the latest word:

--

Duckworth: "The FCC, at least temporarilly, has revised the format in which it is supplying information on Amateur Radio enforcement actions. The new format provides only the state and city with a synopsys of the action taken, without naming any indiciduals.

Pursuant to privacy concerns, the FCC currently is reviewing its proceedures in its radio services regasrding the release of information about individuals. Following this review, the FCC will determine its privacy policy for the future. "

--

As we go to air there is still no word as to when the revirew of privacy proceedures at the FCC will be completed. Its been about two months since the ban on relesing names was put in place. (FCC)

**

COMMUNICATIONS LAW: NORWEGIAN COURT SAYS COPYING DVD'S NOT PIRACY

An appeals court in Oslo Norway has dealt a major blow to those trying to protect the intellectual copyright of material that they own from unauthorized duplication. This, after it upholds the acquittal of a 20-year-old Norwegian

man who posted a program on the Internet for cracking DVD security codes.

Prosecutors had appealed a lower court decision after Jon Lech Johansen was acquitted last January of violating Norway's data break-in laws with his DeCSS program for DVDs. The prosecution had sought a 90-day suspended jail sentence, confiscation of computer equipment and a $2,940 fine. But the judge ruled that Johansen could freely copy DVDs he bought, adding he didn't violate the Nordic country's laws protecting intellectual property.

The case was widely seen as a test of Norway's computer protection laws. Prosecutors said they were considering appealing to the country's supreme court. In the meantime, the decision is being viewed as a major setback for anti-piracy proponents in the entertainment industry, worldwide. (Published news reports)

**

RADIO HONORS: GARC HONORS MEMORY OF KU3Z

The Goddard Spaceflight Center Amateur Radio Club in Greenbelt Maryland has honored one of its own. By a unanimous vote at the clubs Christmas party, the "WA3NAN Space Shuttle Retransmission Facility" has ben renamed the "Joe Grzesik KU3Z Memorial Space Shuttle and I-S-S Retransmission Facility." This, in honor of Grzesik’s outstanding support of relaying of space shuttle and International Space Station ham radio communications on the terrestrial Amateur bands for over two decades. Joe Grzesik KU3Z became a Silent Key in 2003. (N8PK vis the WA3NAN News Exchange)

**

HAM RADIO HONORS: SELECTING THE TOP 5 QSL MANAGER SURVEY

John Shelton, K1XN, Editor of the Go List says that it’s time again for his newsletters’ annual “Top 5 QSL Manager” survey. This is is a process by which DX’ers get to choose those that they consider to be the best QSL Managers with whom they have had dealings with in the past 12 months. Its also a way to provide at least a small “thank-you” to the work performed by these and other QSL Managers around the world.

The results of this survey will be given to Carl Smith, N4AA, for inclusion in the QRZ-DX bulletin and also announced on the GO LIST Reflector by mid February. To vote, send your list of those who you are the five best 5 of 2003 by e-mail to golist@golist.net before February 1st. Again, that address is golist@golist.net. (OPDX)

**

HAMFESTS: WINTERFEST IN VA. IN FEB.

Turning to the ham radio social calendar, the 28th annual Winterfest sponsored by the Vienna Wireless Society is slated for Sunday, February 29th. The gathering will take place at Northern Virginia Community College in Annandale, Virginia. And if you're ready to take the test, an Examination Team will be on hand Saturday, February 28th. More information is on the web at

www.viennawireless.org (KG4OJT)

**

MEETINGS AND CONFERENCES: AMSAT-NA IN FL IN FEBRUARY

And the next meeting of the Board of Directors of AMSAT-NA will take place at the Orlando Airport Clarion Hotel on Saturday, February 21 and Sunday, February 22nd. Starting at 8.30 am on Saturday, the meeting will be open to all AMSAT North America members wanting to take part.

Among the items to be discussed will be to develop the AMSAT North America Strategic Plan while considering current governing factors. AMSAT members wishing to attend and make a presentation to the Board should advise President Robin Haighton, VE3FRH by February 15th. Let him know the topic and the length of time needed to present. His e-mail is ve3frh@amsat.org (AMSAT-NA)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

SPACE AND SCIENCE: NEW TRAVELING SPACE EXHIBIT

The largest traveling space exhibit ever has made its first stop The 12,000 square foot display will allow visitors to touch rocks from Mars and the moon, take a virtual visit to the red planet and explore the international space station.

The exhibit employs the most advanced technology available here on earth to get its message out. The exhibit will be at Seattle's Pacific Science Center through May 9th. Then, it begins its own journey on a 15 city tour over the next five years. (NASA News)

**

EMERGING TECHNOLOGY: SIREN SENSOR TEST IN L.A.

On the technology front, the Los Angeles Fire Department has been asked to study the possibility of equipping engines with a device to turn traffic lights green. This, so vehicles responding to emergencies don't have to stop at intersections. Bill Pasternak, WA6ITF, is in our Los Angeles studio with more:

--

Los Angeles City Councilman Tom LaBonge has asked the Fire Department to work with the City's Department of Transportation to start a pilot program using

technology such as SirenSensor. This is an acoustically activated device that can differentiate emergency sirens from ambient noise and then warn the civilian driver of the approach of an emergency vehicle. It does this by shutting of a near-by car's audio system or radio and activating both audible and visual signals. The councilman believes that this technology can help police and firefighters respond to emergencies with greater speed.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in the City of Angels.

--

No word when the tests of this remote control system might begin. More about SirenSensor is on the web at http://www.findarticles.com/cf_dls/m4PRN/1998_Nov_13/53213508/p1/article.jhtml (LA News)

**

NEW PRODUCTS: NEW QUICK-CHARGE NiMH BATTERIES

Turning to the latest in electronic products of interest to hams, we have this from battery maker Rayovac. That company has announced a new charger that it says is capable of fully restoring a specially designed Nickel Metal Hydride cell in only 15 minutes. Dubbed the I-C3, the new rechargeable cells and charging system uses Rayovac's In-Cell Charge Control technology that puts the control of recharging into the battery instead of the charger. The company says that doing this offers significant performance and convenience advantages over existing rechargeable and disposable battery systems. More information is on-line at www.rayovac.com (Rayovac)

**

NEW PRODUCTS: INTEL IN YOUR TV

And the world's largest microchip maker will soon unveil plans to make integrated circuits for use in digital television receivers. Santa Clara, California based Intel is exploring a technology called liquid crystal on silicon which is a hybrid between the more expensive silicon microchips and liquid crystal displays. This could significantly lower the cost of flat panel high definition displays. Industry analysts say that if this technology is successful it would pose a serious threat to established consumer electronics chip makers in Europe and Japan, such as Philips and Sony Corp., as well as emerging players like Texas Instruments. (Intel)

**

DX

In D-X, keep an ear open for members of a French radio club who will be on the air from Togo. This as the F6KOP Le Radio Club de Provins 77 announce that they plan to be active from Grid Square JJ06 as 5V7C from March 6th to the 12th. More information is on-line at http://5v7c.free.fr/defaulteng.htm (OPDX)

And OPDX reports that S57CQ, is now active from Bhutan as A52CQ and is expected to stay there through January 14th. Activity is expected to be on all bands as much as possible. QSL via S57DX. (OPDX)

**

THAT FINAL ITEM: THAT FINAL ITEM: ARDF

Lastly, some hams have learned the secret of enjoying the hobby while staying physically fit. They're the fans of on-foot transmitter hunting, also called radio-orienteering and ARDF. Reporter Joe Moell, K0OV, has the story of a California ham who is rapidly becoming one of the best.

--

I've told you about the many direction-finding medals that have been won by Jay Thompson W6JAY, Newsline's Young Ham of the Year. But you don't have to be Jay's age to be a big winner at international on-foot transmitter hunts. 61-year-old Bob Cooley KF6VSE of Pleasanton, California has just brought home a couple of gold medals from the IARU Region 3 Championships in Australia.

The competitions began November 28 near Ballarat, a historic gold mining town in northwestern Victoria province. They were hosted by the Wireless Institute of Australia and organized by the Victorian ARDF Group.

Cooley competed in M60, the Superveteran Category for men age 60 and above. On the 4.7-kilometer two-meter course, he found his required three fox transmitters in 1:30:25, seven minutes ahead of the second-place finisher. Then on the 5.6-kilometer 80-meter course, he did even better, finding all three foxes and getting to the finish line in 1:15:22.

All three IARU Regions hold championships in odd-numbered years. These events for Region 3, encompassing Asia and Oceania, drew 50 male and 9 female competitors from Australia, China, Japan, Korea, and New Zealand. KF6VSE was the only guest from North America.

A long-time competitor at non-radio type orienteering events, Bob has improved greatly since he discovered ARDF in 1999. He finished among the top ten in his age and gender category at the 2000 ARDF World Championships near Nanjing, China. This past summer, he won gold medals on both bands at the 2003 USA ARDF Championships near Cincinnati.

You can get a link to the complete results from Australia and learn more about world-class transmitter hunting on the Web at www.homingin.com. There you will also find the details on the upcoming USA ARDF Championships, which will take place in California next June. That's homingin -- one word -- homingin.com

>From southern California, where we do transmitter hunting every month of the year, this is Joe Moell K-zero-Oscar-Victor, reporting for Newsline.

--

Again Joe’s website is www.homingin.com (K0OV, ARNewsline(tm))

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

Yeah. I'm aware that such laws exist. But wouldn't you get laughed
off the force for busting somebody for having a radio?

I can see where it might be an aggravating circumstance attendant to a
serious crime.

Check out the headers. In the the "Approved:" fields, where "Sure, why not?"
usually appears, the spammer's (fake) e-mail address appears instead. And in
the memo fields, you'll find "Posted through an open NNTP server with a
throwaway e-mail account. Resistance is futile."

If this spammer has, as it appears, found a way to crack into moderated
groups, this is kind of scary..

Howard

>>
> So tell us. Where do you look?

At the moment, the MSNBC audio stream is at
<http://www.msnbc.com/news/asx/audio/28/MSNBC_ie5radio.asx>.

It's playing as I post this. though it seems to be skipping at the moment.

I doubt that it's carefully monitored, as I can't find a link to it on the
current MSNBC web site, so there's no need for them to pay particular
attention to the quality of the stream.

I wouldn't be surprised, if the server gets overused, to see it be shut off.

--
"I am afeard there are few die well that die in a battle; for how can they
charitably dispose of anything when blood is their argument? Now, if these
men do not die well, it will be a black matter for the King that led them
to it; who to disobey were against all proportion of subjection." - W.S.

96. WBFO blues list Duke Robillard,Teeny Tucker,Eric Bibb

Listen to blues on WBFO-12 hours each weekend!

Saturday
11 to 4 p.m. and 10 p.m. to 12 midnight
Sunday
11 to 4 p.m.

Blues:
Join WBFO for 12 hours of Blues each weekend.
Check in with your Blues Trio -
Jim Santella, Sat. & Sun. 11 a.m.
Kim Buckner, Sat. 3 p.m.
Debbi Sims, Sat. night 10p.m.

This is a list of blues CDs played on WBFO and reported
to the magazines "Living Blues" and "BLUES BEAT."
The list of CDs represents the recent releases WBFO has in
regular rotation. It does not represent the only music WBFO plays.
These CDs are only representative of recent releases; and the
list acts as a guide to listeners and music fans who
would like to learn more about the artists and labels releasing
blues music.

Used to be, we would call the White House Actuality Line every
afternoon on the phone, and tape whatever nice sound bites were available
that day for broadcast, also. I think that got shut down when Clinton
came into office, and I kind of miss it. I do remember it being available
for Bush I.

Our news guys were slowly patching together various Reagan newsbites into
a very amusing splice job.

Incidentally you may notice the guy hit a bunch of rec. groups. I'm told by
a friend who runs a news server who had the post in his spool that he used
X-No-Archive so the RRB post wouldn't show up on Google. I didn't see it here;
Giganews must have filtered it as spam.

I had posted about this yesterday. I'm not sure why the post didn't make
it into my mailbox for moderation.

> If this spammer has, as it appears, found a way to crack into moderated

Not really. This hole has existed since the beginning of Usenet.

Absolutely nothing. There are a group of people who specialize in
sending such tripe to as many UseNet newsgroups as possible --
possibly just for the disruption value, possibly to send covert
messages, possibly for other reasons. The first has become known
as "HipCrime" (or "DipSlime"), and his followers are generally known
as Hipclones.

The clarity of local AM radio stations is less at night. Is there some sort of law that radio stations have to cut their output when it gets dark? I've noticed that it's the amount of light outside, not the time of day. That is, the lack of clarity occurs whenever it gets dark, not at a certain time each day. I always presumed the stations were cutting power to save money, but then why would it be based on light vs dark, rather than on time of day?

news:bturl7$3t$1@xuxa.iecc.com...
> The clarity of local AM radio stations is less at night.

At night, nearly every AM in the US gets skywave intereference, due to the nature of AM night propagation. Distant signals interfere with what are unobstructed day signals, even if the station has the same power.

The only exceptions are clear channel stations, which get a coverage increase due to skywave and being on realtively protected channels.

> Is there
> some sort of law that radio stations have to cut their output when it
> gets dark?

Stations, to operate at night (nearly 35% don't) have to protect other stations on the same frequency, sometimes as much as 1000 miles or more away. Because of this, at night they may cut power or directionalize where htey send it to avoid interference, or both.

> I've noticed that it's the amount of light outside, not
> the time of day. That is, the lack of clarity occurs whenever it gets
> dark, not at a certain time each day.

The ionesphere makes AM signals skip form just before sunset to just after sunrise. This is why many US stations are daytime only, since they could not run at night without causing interference to others.

> I always presumed the stations
> were cutting power to save money, but then why would it be based on
> light vs dark, rather than on time of day?

It's due to the laws of physics. Newer stations protect older ones. And many can not even run at night.

Here is something the FCC prepared about AM radio at night:

Why AM Radio Stations Must Reduce Power, Change Operations, or Cease Operations at Night
Most AM radio stations are required by the FCC's rules to reduce their power or cease operating at night in order to avoid interference to other AM stations. Our rules governing the daytime and nighttime operation of AM radio stations are a consequence of the laws of physics. Because of the way in which the relatively long wavelengths (see Footnote 1) of AM radio signals interact with the ionized layers of the ionosphere several miles above the earth's surface, the propagation of AM radio waves changes drastically from daytime to nighttime. This change in AM radio propagation occurs at sunset due to radical shifts in the ionosphere layers, which persist throughout the night. During daytime hours when ionospheric reflection does not occur to any great degree, AM signals travel principally by conduction over the surface of the earth. This is known as "groundwave" propagation. Useful daytime AM service is generally limited to a radius of no more than about 100 miles (162 km), even for the most powerful stations. However, during nighttime hours the AM signals can travel over hundreds of miles by reflection from the ionosphere, a phenomenon called "skywave" propagation. (Shortwave stations, which operate using AM modulation on several bands between between 2.3 MHz and 26.1 MHz, also use this phenomenon to broadcast still greater distances, up to thousands of miles). Because of this change in signal propagation from daytime to nighttime, if every AM station kept its daytime operating power at night, massive interference would result. (See also Hours of Daytime-Only AM Broadcast Stations, First Report and Order, BC Docket 82-538, 95 FCC 2d 1032 (1983) for a similar description.)

The FCC was established by the Communications Act of 1934, and was given the responsibility of making a "fair, efficient and equitible distribution of radio service" to the various communities of the United States. In order to meet this responsibility, and in recognition of the physical laws which govern AM radio propagation, the FCC established three basic classes of AM

stations (Clear Channel, Regional, and Local), each of which operates on specified frequencies, or channels There have been some changes since then, but the main features of the plan have remained in place. Here is a quick summary of the three types of AM stations:

a.. Clear channels. On these channels, only one station, called the "dominant" station, was permitted to operate during nighttime hours in order to provide service to a wide area. Footnote 2. A typical clear channel station, transmitting with power of 50 kilowatts into an omnidirectional antenna, provides nighttime skywave service to an area approximately 750 miles in radius. Some examples of clear channel stations are WCBS in New York, WGN in Chicago, WHO in Des Moines and KFI in Los Angeles.

b.. Regional channels. On these channels several stations are permitted to operate during nighttime hours, protecting each others' nighttime service areas by use of directional antennas. As the name implies, stations on regional channels provide nighttime service to moderately-sized or "regional" areas.

c.. Local channels. Essentially, all stations on local channels are permitted to operate during nighttime hours with the same facilities as employed during the daytime. The nighttime service of such stations is limited to very small "local" areas by massive interference from the numerous other stations on the channel.
For the most part, the basic structure of the FCC's original frequency plan has remained unchanged over the past several decades. Additional stations gradually have been permitted to operate on the clear channels. In order to preserve the wide-area nighttime service provided by the dominant clear channel stations, when nighttime operation is permitted, many of these these stations are required to use directional antennas in order to protect the dominant clear channel station from interference to its nighttime skywave service area. Most of these stations are also required to reduce power at night, to avoid causing interference to the dominant stations and to each other. Other stations, which cannot afford the necessary protection at night to other AM stations, are presently licensed to operate during the daytime hours only. (New daytime-only stations are no longer being authorized, since December 1, 1987.)

To find out what daytime and nighttime operations are authorized for your favorite AM broadcast station, you may use our AM Query. The Hours of Operation for this Record field for the station will indicate what hours the station may operate with the listed station parameters, either as Unlimited hours operation, Daytime, or Nighttime. If the record shows the "Hours of Operation" as "Daytime" or "Nighttime", then you can find the approximate monthly times that the station will change from day to night operation (or cease operation for the night in the case of a daytime-only station) by entering the coordinates (latitude and longitude) into the the Sunrise / Sunset Times Calculations program. Note that a station may have multiple records, for different daytime and nighttime operations.

Do you want peace?
Do you want to do something for peace?
Do you want to transmit for peace?
Radio rainbow is going to transmit for peace.
Talk to people. Directly.Talk to their conscience. Talk about starting conversations. Talk about making a difference. Talk about more colors than black and white. Talk about the Rainbow. And good music. Nice programs. Creating a brotherhood of peaceloving people.By reading their e mails. Hearing their thoughts. Bouncing across the earth.
We do not only want to talk to good people. Also to bad people.
We are going to transmit. From sea. The North Sea. From a ship. I know, thats exiting.
We are not rich. We are idealists. Like you. We do have a ship. We do have the people.
We do have in this stage a low power transmitter on shortwave 75 meter band, and medium wave.
So you can hear us. In the Netherlands. United kingdom. Belgium. Germany. Thats it. But the world is bigger.
And your transmitters may be better.
If you own a free radio station, please relay this signal, so more people can get Loving Awareness.
Why should this be done by free independant radio stations? Because nations are doing politics, are involved in conflicts.
People are making peace. Individual. If we should have one listener, he or she could make a difference. Save a life. Thinking Big.
Because of free independant global transmissions by several free stations from several parts of the world. Because of this , Radio Rainbow don't want to be related to a country. Thats why we will be transmitting from a ship in international waters. The begintune will be She's a Rainbow by the Rolling Stones. Transmissions will start soon. Please, please reply. Please take our transmission for you, at wednesday evenings at 10 o'clock U.T.C. (g.m.t.) and forward them. Save lives. Bring peace. By transmitting one hour a week for Peace.This message is sent to you. Please sent this mail to all of your international radio friends. Please reply on this mail. Let us know what you can do. We will let you know when the first transmission will start on which frequency's.
Thank you!
Karel van Raan, press agent Radio Rainbow project. Be with us. Give us your thoughts. radiorainbow@hotmail.com

I always presumed the stations were cutting power to save money, but then why would it be based on light vs dark, rather than on time of day?
>>

Power and/or pattern change is done to accommodate a station of lesser class against a station of superior class; or a station of the same class, but one which was authorized before the subject station.

AM is a "demand allocation" scheme, and the first station to be authorized is usually the superior station, with respect to subsequently authorized stations.

Extreme example: 710 in L.A. and 1510 in Boston are protected by stations of higher class (710 in Seattle and 1510 in Nashville) simply because these stations were authorized before Seattle and Nashville were authorized. L.A. and Boston remain Class B; Seattle and Nashville became Class A.

Power and/or pattern change is not always at local sunset or sunrise at the affected station. It could be local sunset and/or sunrise at another station (see 1110, 1530 and 1560 for examples). There are historical reasons for this.

So-called DA-3 operation is also possible, where a station has defined day and night operating parameters, but during so-called critical hours it operates differently, usually with parameters in between day and night, although not always.

Matt Beckwith <beckwith@wchsys.org> wrote:
>The clarity of local AM radio stations is less at night.

This is because all of the other stations everywhere else in the world
are coming in through skip at night, and interfering with local stations.

>Is there
>some sort of law that radio stations have to cut their output when it
>gets dark? I've noticed that it's the amount of light outside, not
>the time of day.

Many smaller stations are forced to reduce power at night, or go off the
air altogether, to protect stations on the same frequency in other parts
of the country.

That is, the lack of clarity occurs whenever it gets
>dark, not at a certain time each day. I always presumed the stations
>were cutting power to save money, but then why would it be based on
>light vs dark, rather than on time of day?

Because the ionosphere is denser and closer to the earth at night, which
is why you can get transatlantic AM stations at night and not in the daytime.

Christopher C. Stacy wrote:

>I don't understand what the problem is. Can't you just choose
>not to select those (clearly marked) articles for reading?

I would not characterize this as a "problem." It's a constructive suggestion to improve Airwaves.

Two issues:
I read Airwaves via digest form, not individual Usenet articles (if it's even still on Usenet). Regardless, while I *can* scroll past postings via the digest in which I'm not interested (which I regularly do on many lists I receive), doing so is inconvenient when the individual posts are as lengthy as these two regulars are (often 1/3 or 1/4 of an entire digest for just one of them - see forthcoming remark about bandwidth). I spend enough time reading the info I *want to* read on the many lists to which I subscribe; I don't need to waste time downloading and sifting through extended postings that are better left to their own sites or mailing lists.

#2: It's rude to more or less hijack Airwaves with these posts and the like when the postings are as long and as regular as these two examples are. If a single one-off on-topic post is contributed by someone, that's not a concern. However, it's a waste of bandwidth to repeatedly, week after week, post long playlists and scripts to a forum like Airwaves, which is not a playlist or script repository. There are alternative and more effective methods to distribute the entire volume of information contained in these posts.

>Spam is really only a problem if it's overwhelming, or unmarked.

I didn't suggest the ARRL and WCBN posts are spam. I do, however, believe it is inappropriate to regularly post *lengthy* playlists and program scripts to an emailed listserv when (IMO) the courteous and practical method to share the info is to simply post a URL where interested readers can find detailed information. Airwaves can certainly be used to post some headlines from the playlist or script accompanying the URL to offer an idea of what the updated script or playlist contains, but not the whole damn things.

This is not a major earth-ending issue, but I think my suggestion is practical and courteous for readers.

111. IBOC interference complaint - advice?

Newsgroup: rec.radio.broadcasting
Date: 2004-01-13 02:58:41 UTC
From: wbrw@radiomailbox.com
Message-ID: <btvmt1opt1@xuxa.iecc.com>
Source record: 6251
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

I would like some advice on what is the most proper and effective way to issue a complaint with the FCC regarding harmful interference being caused by a radio station that is using the IBOC digital system.

The station in question is 710 WOR in New York City, which has been using the IBOC digital system since October 2002. And since that time, they have been causing harmful interference to frequencies as far as 40 kHz away from their carrier -- across a region of at least 680 through 750 kHz.

I have observed this interference throughout northern and central New Jersey -- at locations up to and beyond 50 miles away from WOR's transmitter site -- on a wide variety of receivers, ranging from highly selective car radios to hi-fi AM Stereo receivers. And tellingly, this interference completely disappears the instant that WOR stops transmitting their IBOC digital sidebands at sunset each day.

Of course, I understand the fact that the IBOC system is designed to occupy a 30 kHz total bandwidth, including 15 kHz above and below the station's carrier. Thus, when WOR's IBOC is in use, I do not expect to be able to receive anything but noise on 700 and 720 kHz, and I expect my reception on 690 and 730 kHz to be severely degraded, if possible at all. That is indeed what I am observing, but that is not my complaint.

My complaint is about the scratchy, crackly type of "splatter" interference that WOR is causing to be heard on 680 through 750 kHz whenever their IBOC system is in use. This interference varies in intensity in accordance with WOR's analog modulation -- the "louder" their audio is, the more severe the interference is. Thus, by these indications, this interference appears to be very similar in nature to the wideband splatter caused by an analog AM station that is consistently exceeding the -100% negative modulation limit, or by a station whose directional antenna array is affecting their signal to such a degree that a similar receiver-based effect is being produced, especially towards the signal's "nulls".

Having mentioned this to WOR's engineers numerous times, their claim is that according to the modulation monitor and spectrum analyzer at their transmitter site, WOR's radiated signal (with IBOC in use) falls within the NRSC radiated emission limits, and therefore is "legal" -- end of story. They have refused to conduct any field measurements that might support or dispute my claims, other than "it sounds fine on my car radio". In fact, WOR's engineers have even threatened legal

action against me, because of my claims that WOR is operating "illegally". Needless to say, this has resulted in a breakdown in communication between them and I. I have chosen not to discuss this issue with WOR's engineers any longer, because nothing was being accomplished.

But now that WOR has made headlines in national radio publications, boasting about the success of their IBOC installation, I feel the time has come to address these issues, and put it in the hands of the FCC and more capable engineers to decide whether or not WOR's IBOC signal is causing harmful interference and/or is exceeding the FCC's radiated bandwidth specifications. In particular, WOR's Director of Engineering brings into question the performance of their directional antenna array and how it may be affecting their IBOC signal -- stating in his Radio World article, "It should also be noted that the pattern bandwidth of our null is not great. On a spectrum analyzer, WOR's upper sideband does not exist north of Paramus, NJ".

Obviously, that kind of problem can seriously degrade an analog AM signal, and would be particularly harmful to the quadrature-modulated component of an AM Stereo signal. But what would the complete lack of an upper sideband do to an AM IBOC signal, which also makes use of quadrature modulation? That is a big question mark, because nobody has ever addressed it before -- not the FCC nor the NRSC -- and because WOR's engineers are apparently not concerned about it enough to conduct any field tests with and without their IBOC signal in use.

Obviously, as one of the very few AM stations in the world using the IBOC system, WOR is essentially "flying by the seat of their pants" -- and in that regard, I can cut them some slack as they continue to experiment with it. But to consistently ignore and dismiss these interference issues is a serious problem -- especially during these short winter days, when skywave propagation during the early morning and late afternoon "critical hours" can cause WOR's IBOC signal to interfere with distant stations, including several in Canada, such as 690 CINF and 730 CKAC in Montreal and 740 CHWO in Toronto. In fact, I distinctly remember tuning in 740 kHz on my car radio a full hour before local sunset and hearing CHWO's signal coming in with heavy interference from WOR's IBOC "splatter". That was observed in Princeton, NJ, nearly 50 miles away from WOR's transmitter site.

So, to sum up this long-winded message up, since my attempts to address these issues directly with WOR have failed, how should I go about bringing it to the FCC's attention? Hopefully they can take some time our from their crusade against non-existent third-adjacent-channel interference from LPFM stations to address a much more significant interference issue on the AM band....

Yer just a young'un; I've been Usenetting for the better part of fifteen
years...

I would like to see some form of authentication, perhaps using PGP, to help
avoid stuff like this, and I have heard that the much-touted Usenet2 was
supposed to have helped in that regard... but Usenet2 never really got off
the ground...

>Useful daytime AM service is generally limited to a radius of
>no more than about 100 miles (162 km), even for the most powerful stations.

The FCC apparently didn't take areas with high soil conductivity into consideration when they wrote this.

Here in South Dakota, strong AM daytime signals propagate for 200 or more miles. KFYR, WNAX, KSDN, KFGO, KSJB, etc. are all examples of this. And these stations are only putting out 5,000 watts. Over in the Black Hills, KBHP runs 25,000 watts on 810 and can easily be heard up and down I-29 on the opposite side of the state. That's 300-350 miles from the transmitter.

But that's okay. We're used to being ignored by the bureaucrats in Washington, DC :-)

115. Re: IBOC interference complaint - advice?

The antenna pattern can cause the audio to sound distorted (because the carrier is lower than the sideband you're hearing) but it won't move any energy out of band or in particular cause splatter.

>680 through 750 kHz.

You can be sure WOR's operation is entirely in accord with the FCC's
rules. By now the local FCC field office will have checked them out
six ways to Sunday.

The problem is not WOR. The problem is that digital modulation
schemes tend to require more bandwidth than analog schemes. As a
result, neither the AM nor the FM form of "HD Radio" is truly
in-band, on-channel; in-band, adjacent-channel is a more accurate
description.

The January 2 issue of _Radio World_ contains an article describing
a Chicago FM station's experiences with "HD Radio", and notes that
several stations in adjacent markets, having complained to the
FCC about interference from this station's "HD Radio" signal, have
been told they have to put up with it. The official line seems to
be that stations are only licensed to provide coverage out to their
protected contours, and anything they cover beyond that is subject
to whatever interference may arise in the future, whether from
"HD Radio", LPFM, local computer networks, or whatever.

I believe this position is poor policy because a lot of smaller
stations are dependent on coverage beyond the protected contour
for their economic survival. These are, for the most part,
stations that were "dropped in" over the past twenty years as
"rimshots" to various markets, licensed to suburbs or rural
communities that can't realistically support them. Deprived of
access to adjacent markets, many of them are likely to become
unsustainable, I think.

If the FCC wants to pretend stations serve no listeners beyond
their protected contours, then it should not be authorizing
stations that can't prosper within those contours. Moreover, it
ought to recognize that just as broadcast spectrum is a limited

resource, so are advertising dollars in any community, and it is not necessarily the case that more stations on the air mean better service. But I digress.

The bottom line is I believe IBOC is a mistake, and many stations and their listeners will suffer because of it.

You could choose to read it on Usenet and killfile the posters whose posts you don't want to see. That way, the people who *do* want to read these posts could still see them.

If this group were getting a hundred posts a day, it might make sense not to allow certain types of posts with a higher than average annoyance factor. But this is a low traffic group; some days I see no posts at all on it.

Sadly, they are probably right. Write a letter to your local FCC
field bureau and let them know what you've heard and what you've been
through.

My bet is that the FCC will send someone out with a spectrum analyzer to
look at the spectral envelope, and it'll be totally legal. It is pretty
depressing to see what is legal.

The FCC pretty much only responds to letters, but they do actually respond
to letters.

The "IBOC" surely falls within the emission mask that has existed for a long time. Problem is that before IBOC, what fell toward the edges of the mask was the ocassional zing or sput. Now IBOC fills it chock full on a full-time basis. We have the mask used to condon a type of emission for which it was NOT designed.

I don't have sympathy for the rim-shots which never had any intention of serving the town they used to justify "first local service" in order to get their license.

> If the FCC wants to pretend stations serve no listeners beyond
> their protected contours, then it should not be authorizing
> stations that can't prosper within those contours.

The FCC hasn't required applicants to even file fake income projections for a number of decades. Their policy is to allow as many stations as the technical rules permit, and they've watered down the tech rules over the years in order to allow more stations. Every Congressperson has had a friend who wanted a radio station.

> Moreover, it
> ought to recognize that just as broadcast spectrum is a limited

Ever hear of "Let the marketplace decide". Those phone calls from Capitol Hill would keep the FCC busy full time if they tried to use the kind of judgement you recommend.

> The bottom line is I believe IBOC is a mistake, and many stations
> and their listeners will suffer because of it.

I certainly agree with you. And the flood of more FM translators will further degrade the service of existing stations.

Sigh!

It's David who is oversimplifying. That statement couldn't have come from
anyone in the broadcast allocation part of the FCC.

The FCC rules definitely require consideration of ground conductivity. The
old printed rules contain a conductivity map and propagation curves for each
AM frequency for each conductivity. THAT is the basis upon which AM
stations are allocated and power and directional antennas specified.

In any case, the income projections were intended to show that an applicant coulda fford to build and operate the station, not the overall ability of a market to support additional signals. It was called "Financial qualifications" and had nothing to do with competition.

Nope. I clearly labeld my post as having been copied formt he FCC website,
where there is a "consumer grade" explanation of why AM staitons have
different coverage by day and night. I think the intent is to show that
there is a reason for the differences in general terms, without getting into
concepts such as the ground conductivitie of rock, sand or laomy soil.

> The FCC rules definitely require consideration of ground conductivity. The
> old printed rules contain a conductivity map and propagation curves for
each

But this is not the basis for the explanation on the FCC website, which is
not guidance for engineers but for average, non-technical listeners.

>Why only at night? Why unobstructed in the daytime only?<

Radio waves radiate more or less in all directions from an AM tower, meaning that some of them radiate skyward.

The ionosphere, in the presence of solar radiation (i.e., during the day), absorbs the radio waves. In the absence of solar radiation (i.e., during the night), it becomes a reflector, bouncing the signals back to earth hundreds or thousands of miles beyond the transmitting tower. This can create interference with stations on the same or adjacent frequencies at night, where no such interference would occur during the day. To avoid such interference, many stations must either cut transmitter power at night, or employ directional antennas...or sometimes both.

>What is a skywave?<

Radio waves reflected by the ionosphere under nighttime conditions.

>What is a clear channel station?<

It's now an obsolete term, but "clear channels" were AM frequencies with only one station on them. What are now referred to as "clear channel" stations (not to be confused with Clear Channel Communications, the group station owner) are for the most part the 50-kW AM stations using non-directional antennas, many of which have been around since AM radio's early days of the 1920's.

>Why do they have to protect other stations?<

The AM band is organized as "first come, first served." Stations that were broadcasting first get priority, and are protected from interference by stations that came later, through the use of lower power or directional antennas.

>why only at night?<

See above, re the changes in the ionosphere depending on whether or not the sun is up.

>Why do newer stations protect older ones?<

FCC rules, plus international treaties to which the United States is a signatory.

Corrupt in ANY way? No, it's not possible.

I could take a completely valid wave file and replace the data
chunk with nothing more than random numbers, and as long as I get
the chunk header right, it's a valid wave file. I could swap all
the bytes of all the samples And it would sound AWFUL) and as long
as the chunk headers are right, it's a valid wave file. I could
change the sample rates around and as long as I maintain consistency
in the fmt chunk, it's a valid wave file. I could take an MPEG
wave file, change the fmt chunk to say it's PCM format, and, again,
as long as everything is consistent, it's a valid wave file, even
though the file is very audibly corrupted.

You CAN find things like contradictions in parts of the fmt chunk,
invalid lengths of chunks, missing fmt extension for non-PCM formats
and such.

> Ideally, it would also report the sampling rate and bit rate of the

Because AM is a "demand allocation" system, not a "table allocation" system.

IOW, for AM, the first station on a frequency has absolute priority over every subsequent station on the same and adjacent frequencies.

The amateur radio posts have nothing to do with the ARRL (American Radio
Relay League). They are from another group devoted to amateur radio.
I'm actually not sure if it's the group doing the posting or if
it's a third party.

They don't belong here because amateur radio has nothing to do
with broadcasting (beyond a common history that started with
some people being less interested in radio as a hobby so they
simply built or bought receivers (becoming listeners
at a time when nobody had much idea for using the medium), and then hams
became aware of this so they started broadcasting, ie speaking
to all those listeners at home, and then deliberately setting out
to be broadcast stations.

No, I think they land here because someone is simply going after
the "radio" angle in the newsgroup name, just like someone posted
an ad in the past week looking for WWII surplus receiver, that has nothing
to do with broadcast either.

The only possible reason that the Amateur Radio Newsline posts
belong here is if it's seen as a source of broadcast material
for news outlets or news programs on broadcast stations. And I'm
not sure that fits in here; either it opens the gates for all
kinds of similar groups posting their stuff in the hopes that

broadcast people will see it and make use of the stories, or nobody is reading it and then there's no point.

Keep in mind that the posts are really accessible if anyone is interested. At the same time they post here, they post to a number of newsgroups in the pertinent hierarchy, rec.radio.amateur.* At the very most, this point only needs to be added to a periodical post here of repetitive matters (such as what is on topic). Indeed, such a post could be made to the newsgroup only (where random people are likely to be enticed to post), rather than to the mailing list too.

Realistically, the judge of what's acceptable should be it's relevants to the newsgroup topic.

Michael

I have less concern for the "rimshots" than I do for the 50KW
blowtorches that actually derive ratings from beyond their protected
contours.

KGO has been #1 in San Francisco since dirt was invented. What I'm
watching is what effect wiping out such stations' profitable fringes
will have on their numbers. WOR actually gets some numbers in
Philadelphia. What happens if another IBOC station wipes out WOR in
Philly? Will it be enough to drop their overall share from 1.8 to 1.6?
It'll take a number of years before we'll know how many stations will
be wiped out, and where.

It strikes me that IBOC is mutually assured destruction.

Dirty Word Ban

To amend section 1464 of title 18, United States Code, to provide for the punishment of certain

profane broadcasts, and for other purposes. (Introduced in House)

HR 3687 IH 108th CONGRESS 1st Session

H. R. 3687

To amend section 1464 of title 18, United States Code, to provide for the punishment of certain

profane broadcasts, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

December 8, 2003

Mr. OSE (for himself and Mr. SMITH of Texas) introduced the following bill; which was referred to

the Committee on the Judiciary

A BILL
To amend section 1464 of title 18, United States Code, to provide for the punishment of certain

profane broadcasts, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in

Congress assembled, That section 1464 of title 18, United States Code, is amended--

(1) by inserting `(a)' before `Whoever'; and

(2) by adding at the end the following:

`(b) As used in this section, the term `profane' , used with respect to language, includes the

words `shit', `piss', `fuck', `cunt', `asshole', and the phrases `cock sucker', `mother fucker',

and `ass hole', compound use (including hyphenated compounds) of such words and phrases with each

other or with other words or phrases, and other grammatical forms of such words and phrases

(including verb, adjective, gerund, participle, and infinitive forms).'.

shit piss fuck cunt asshole cock sucker mother fucker ass hole

The Exact Audio Copy program checks for corruption when ripping a file from a CD to WAV format. But I don't think it can analyze existing files.

In principle, you could write a program that opened and read the WAV file, looking for such things as excessively long all-zero or full-scale sequences, or abrupt jumps in sample values.

I have obtained several of these. They were being used as line amplifiers at my job, but are now being replaced. I've contacted the present owner of the Dynair name in search of a schematic, but apparently they can't help me. I thought I'd post this request on usenet before I have to take the trouble to trace out the circuit and draw my own schematic.

These are transformer-coupled (UTC 0-11 input, A-22 output) and use four Motorola 2N697 TO-5 transistors. They mount in a 2RU frame along with a power supply (model PS-3015B or PS-3015C). I'd love to find schematics for the power supplies, too.

I was originally planning to harvest the transformers and throw away the rest, but I might keep them intact since they're apparently pretty rare (at least I've never seen one before) and just might sound cool.

Thanks.

Tables are published for FM and TV, which allocate FM channels and TV channels to specific cities.

Yes, FM has channels, starting with 200, although 201 is the lowest channel actually allocated, while 200 is reserved for situations where 201 or higher won't work.

The tables can be read on-line.

Modifications to the tables have been done from time to time.

>Federal Communications Commission Chairman Michael Powell has asked his fellow commissions to reverse a decision made by the agency's enforcement bureau that OK'd U2 singer Bono's use of the F-word on television.<

In other words, screw the Commission's own rules (which the ruling on the f-word was in strict accordance with) and screw the First Amendment. Son-of-Colin doesn't like THAT WORD!!!!!!!!, so it MUST go!!!!

The visual image of FCC members and Congress-critters falling all over each other trying to have certain words banned from the airwaves would be laughable if it weren't so pathetic.

But, what the heck...let's just repeal the First Amendment and be done with it. It's obviously become a gross inconvenience to the Michael Powells and Donald Wildmons of the world, who feel the need to control what we see and hear. Totalitarianism by any other name would smell just as rotten.

I missed the original post so I'm not sure what you mean by corrupt but they certainly can be corrupt: missing or fouled headers; headers that are correct but the data is corrupt; etc. The second kind is the hardest to detect because the OS thinks they are fine and will even open them and they will "play" somewhat (even though it's usually ear crunching noise). I don't know of a program that will detect the second type but you might be able to either copy the files to another directory and see if the copy fails. That would be my first step. That might tell you which files are physically corrupt. Secondly you might be able to use something like Windows Media Player and just play the whole directory (like a playlist). If any files fail to open or if they play noise you'll know they are corrupt. Of course someone while have to sit and monitor it but you can "fast forward" to the next one when you know the file is OK.

> I thought Wav files were raw? no way to detect corruption !.

No, WAV files are NOT raw files. Wave files have format information,
enabling a wav reader to fully interpret the contents. A raw audio
file simply has samples, no format, no sample rate, no nothing.

On CAN detect corruption in the various chunks, like the fmt
chunk (bogus sample rate, inconsistent average byte rate, and
so on), one can detect whetehr chunk headers are corrupted, and
so on.

But, even if its MPEG encoded, one may net necessarily be able to
detect if the audio DATA is corrupted. (Yes, WAV files CAN be MPEG
format).

Source record: 6297

The ionosphere is stratified, or in other words, has layers. It's the E-layer which, in the course of the day, charged by sunshine, actually absorbs medium wave frequencies...it's only when the wavelengths are shorter (shortwave) where the E-layer reflects for daytime skywave propagation. The E-layer, when particularly dense like during solar maxima, will even reflect VHF frequencies (normally it passes them day and night). When that happens you'll hear old radio people call it "sporadic-E", since it's so, well, sporadic in nature - there's really no predicting when it will happen. But when it does, you'll sometimes find FM stations from 1000 and more miles away coming in on a car radio, so strong sometimes that it'll blow over a local station which has only direct line-of-sight propagation to get to the same receiver.

At night, without the sun to ionize the gases there, the E-layer "evaporates", and then the F-layer comes into play. The F-layer reflects medium wave frequencies pretty well, except when they're disturbed by a solar flare or other phenomena. The F-layer actually has two parts (F-1 and F-2, naturally enough). A shortwave station which will skip 1000 miles during the day will skip twice that or more at night, since the F-2-layer is higher and is more in play during the night.

Reading from the CD is different, because the drive gives errors
when it can't read/reconstruct a sector from the CD. Also, the actual
data from the CD is "raw" whereas a .wav file is not.
As Dick Pierce said, the .wav file is not "raw" but has a header
with sample rate, number of channels, number of bytes per sample, file
length and such. This can be checked for "reasonable" values and the
claimed length against the actual file length, things like that.

>In principle, you could write a program that opened and read the WAV file,
>looking for such things as excessively long all-zero or full-scale sequences, or
>abrupt jumps in sample values.

This is a way to discriminate in the .wav data or a raw file
whether the content is "musical" or not, but may not be foolproof.
All-zero sequences might last for over four and a half minutes. <g>
An LP declicking algorithm would find abrupt jumps with no trouble.

Radio waves radiate more or less in all directions from an AM tower, meaning
that some of them radiate skyward.
>>

An ideal non-directional radiator which is 180 degrees or shorter has no
radiation at 90 degrees to the horizontal plane.

The taller a radiator is, over 180 degrees and up to 225 degrees, the higher
the radiation is in the horizontal plane, and the less the radiation is in the
vertical plane except for 90 degrees, where the radiation increases above 180
degrees to reach a maximum at 360 degrees.

A 360 degree radiator which is center fed and has the base grounded through a
capacitance is called a Franklin, and is the most efficient radiator known.
This is essentially two colocated 180 degree radiators.

Also known as single stick stations, as their antennas use only a single
tower and radiate omnidirectionally.

161. For sale: Partial ownership of NY AM radio station.

Newsgroup: rec.radio.broadcasting
Date: 2004-01-15 17:48:18 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <bu6jp2ktb1@xuxa.iecc.com>
Source record: 6201

For sale:

Partial ownership in AM radio station. Upstate NY near
Albany. 1 KW, daytimer, some night power. On the air
since 1981. College town.

Joint venture. Active or inactive investors with at
least $10,000 each are welcome. All investors would be
on the board with full voting rights if desired. No
individual may own over 49 percent. This rule applies
to me too!

References:
a-My parole officer. Mr. Larson E. Rapp. Syng-Syng,
Ossneat, NY

b-Brazilian Bandit Airways. (Purchased one-way ticket
to Rio using all small unmarked bills).

Please! No "AM bashers" or other negative nabobs.

Tel: (478)741-1710 in Macon, GA

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

>>
>>What is a clear channel station?
>
> It's now an obsolete term ...
>>

Hardly.

Clear channels are: 540, 640-780, 800-900, 940, 990-1140, 1160-1220, 1500-1580.

Local channels are: 1230-1240, 1340, 1400, 1450, 1490

All other channels are Regional channels.

It's clear that the most channels are clear channels.

The popular meaning of the term may have changed, but the legal definition hasn't.

There is at least one Class I station (either Class I-A or Class I-B) on every clear channel, and all such clears are clearly identified in the NARBA and Rio treaties as to power and antenna efficiency (although for some Mexicans, the antenna efficiency may be bogus).

>>
Also known as single stick stations, as their antennas use only a single tower and radiate omnidirectionally.
>>

In general, Class I-As are single-stick.

But, there are as many Class I-Bs which are single stick as there are Class I-As which are DA-1.

Class I-As which are or have operated DA-1: 660, 870, 1030, 1100, 1580.

Class I-Bs which operate ND: 680, 810, 850, 940, 1070, 1550

Also, there is a single stick Class II-B on a clear channel where the Class I-A is DA-1: 1580

And, there is a Class I-A which protects a Class I-B: 1540, protecting KXEL, which is a Class I-B.

Finally, there are Class I-Bs which protect Class II-Bs: 710 and 1510.

>as for me, Canada's looking mighty fine...even with the snow (that I can't tolerate).<

We're doing exactly what the terrorists wanted: In order to be safe from EVERY conceivable societal ill (including those DIRTY WORDS!!!!!!!!!!!), we are not only ignoring our own laws, but we're forgetting where we came from and why our country was formed in the first place. When every little thing that PO's some legislator is made into a law, we are not free, and we need to stop kidding ourselves into thinking we are.

Google it.

Go to www.google.com and do a query.

I put in directory radio stations and got several results, including
http://www.100000watts.com/.

You might also search the FCC's site.

Paul Schleck doesn't manage rec.radio.broadcasting, and I don't know much about him except that he's e-mailed me a couple times about xposting between rrb and rec.radio.info.

I moderate rrb, and while (like the original moderator) I try to be liberal in what I accept, there are certain basic guidelines that you must follow or I won't post your stuff.

For anyone interested, here's a reminder of upcoming DX tests; if anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least March (2004)".

Please remember, what's listed as being on, say, Monday *may* be what you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting
me know, and please, drop the station personnel a note, via e-mail or snail
mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

174. NYC radio: Does it suck or what? (92.7 FM WLIR is now gone!)

Newsgroup: rec.radio.broadcasting
Date: 2004-01-16 15:24:25 UTC
From: darkcomet@att.net
Message-ID: <bu8vn9$63g$1@xuxa.iecc.com>
Source record: 6217
Cross-posted to: nyc.politics,rec.radio.broadcasting

What happened to 92.7 in New York City? IT WAS THE BEST RADIO STATION IN NYC. It's now a spanish station! It used to be this hip rock, dance, new wave station......and for a LI station it was gaining popularity in the city. Now it's gone...

The other stations in NYC pretty much suck. Even 101.1 FM isn't playing good oldies.....I tend to listen to CD's now for oldies and stuff from the 70's.

105.1 FM and 97.1 FM are ok if dat music is your "thang" (you go girl!) ....just kidding, I like hip hop, although it's starting to sound boring since they play the same old songs over and over again. Z100 is too teen bop.....and their morning show is incredibly boring.

As for dance music, 92.7 played all sorts of great imports from EUROPE (which has the best dance music) With 92.7 now gone (which supported dance music a lot), KTU is the only station playing dance music, and they suck at it. The DJ's are extremely unprofessional (e.g. Vic Latino's talks over all the songs he plays at night, speaks over lyrics, etc...plays from his sound effects machine) and during the day, they play old crappy songs that no one has ever heard of before

Overall, I just want to say that New York radio sucks right now. What can help it? I believe NYC needs new radio stations.....it would really help.

Then I think most of us are using the popular term which meant there
was only one station on the frequency. Not even a daytimer shared it.

I seriously doubt that there will be any constitutional amendment. That's all we've been hearing, lately. The jerk with the 10 Commandments in a public place has followers wanting an amendment. Listen to talk radio "I don't like it, so let's amend the Constitution."

I believe the nation is far less religiously Conservative than it might seem. A Constitutional Convention is a terrible risk, since the entire document would be open for change. It's a double edged sword where separation of church and state could be strengthened, guns gould be forbidden, except for the military.

The only time I'd want it changed would be to give people more freedom, not less.

Rich

>or Class I-B) on every clear channel, and all such
>clears are clearly identified in the NARBA and Rio
>treaties as to power and antenna efficiency (although
>for some Mexicans, the antenna efficiency may be
>bogus).

Where would this listing be located on the web?
>>

The FCC AM site.

List all stations on any clear channel (by specifying no call letters and
restricting the frequency range to any one specific clear channel) and observe
the class letter.

"A" is Class A, "B" is Class B, etcetera.

On a clear channel, you should find only As, Bs and Ds.

Central American stations will show up, too, and some of these are notified as
described, but many are not.

My assumption is if the FCC database has no class letter, then the United
States has not "accepted" the station's notification, or the class is
indeterminate.

It is common for any change to be submitted to Canada and Mexico for
acceptance, particularly in border areas, and vice versa.

This is one reason why almost all of L.A.'s FM's are operating way above Part
73 power ... because they started out that way, and when it came time to

formalize those existing operations, Mexico was requested to accept those operations, which Mexico did, thereby "grandfathering" those stations with very high (most) or even super power (KPFK).

WLIR was a beacon in the darkness for many years. For more gorey
details, see this week's Northeast Radio Watch at

<http://www.fybush.com/nerw.html>

But really, hasn't New York radio mostly sucked for a long time anyway?
In that respect, it's no different from most other markets where
stations play the same songs over and over again thinking that's the
way we like it.

I've just gotten XM satellite radio in my car and don't have to put up
with it any more. I suggest you check out XM and Sirius.

Sure....that way there'll be more money to try and fill up the money pit that these
properties represent. Besides, I get the impression that Meyer doesn't have any
money of his own, and would prefer to skim off the top using other people's money.

>>
Then I think most of us are using the popular term which meant there was only one station on the frequency. Not even a daytimer shared it.
>>

U.S. Class I-A clears are: 640-670, 700, 720, 750-780 820-840, 870-890, 1020-1040, 1100, 1120, 1160, 1180, 1200-1210

Canadian Class I-A clears: 540 (first), 690, 740, 860, 990, 1010, 1580

Mexican Class I-A clears: 540 (second), 730, 800, 900, 1050, 1220, 1570

I'm having trouble thinking of a single U.S., Canadian or Mexican Class I-A clear channel which did not have at least one co-channel daytimer somewhere in the U.S.

And, remember that stations in the U.S. territories (and former territories, now states) were allowed to operate on U.S. Class I-A clears many decades before "Rio" caused all clears to be completely broken down.

The scumbags at The Morey Organization just pushed me over the edge
by selling out NYC radio.

I got my Sirius for the car and home and I am a happy camper!

PLUS! No commercials!

I'm looking for somebody to record tomorrow's Westwood One National version of the NFC Championship game for me. We don't get that feed in our area and I much prefer their games to the Carolina radio team's. I'd prefer an FM signal or direct recording from their satellite feed because the quality would be better.

It can be on MiniDisc, 128kbps mp3 file, or Reel to Reel. Cassette or CD would be accepted as a last resort.

Please E-MAIL me if you can help so I'll know not to look further.

NY radio isn't alone in terms of just very poor radio. It is nationwide now. Most all CHR Rhythmics sound the same. Most countries are homogenized as hell. News-Talks all sound the same. All of this "on the 5s" garbage! Hahaha!! There is just extremely weak radio now, and it probably won't improve for sometime. Notice, I made no reference to Clear Channel, Entercom, Infinity, etc. as the reason for this. That goes without saying-:)

That could be taken as a mean-spirited response. Meyer seems to be trying to put together a limited partnership of sorts to buy a station of the kind most people do not want and to actually run it. If he makes money by putting a deal together, what is wrong with that?

Most Americans don't have "any money on their own." 75% of retirees will live off Social Security alone. Why not try to improve one's situation?

Here's your hat, what's your hurry?

You folks are all barking up the wrong tree. Everyone here bristling because someone (Powell), who runs the goddamn organization, thinks profanity ought not be qualified by whether or not it's used as a verb or a noun versus used as an adjective?

Or do you think it necessary that four-letter words be allowed in broadcasting? For what purpose? Don't you have enough coarsening of the culture we're mired in? Your children will sit in front of the television and you don't care...or even welcome...if someone is allowed to take them further along the path of de-sensitization? Championing someone's right to be vulgar boggles the mind. I'm embarassed for you.

Please save the "it's up to you what your children watch" and "there's an on/off switch on the TV you know" argument. To welcome vulgarity over public airwaves will quickly lead to saturation and there will soon be nothing to watch or no choice to make that doesn't include it. Talk about the decline of civilization...

John Webster

Seems the "morality police" are at it again...

>Please save the "it's up to you what your children watch" and "there's an on/off switch on the TV you know" argument.<<

Please save the "it's for the children" argument. Government isn't your nanny, and it also isn't your childrens' parent. And if it's court rulings you want, federal courts have repeatedly upheld the rights of adults to hear and see adult material, and have repeatedly struck down bans on certain material because children "might" see it.

>To welcome vulgarity over public airwaves will quickly lead to saturation and there will soon be nothing to watch or no choice to make that doesn't include it. Talk about the decline of civilization...<

...and once all that vulgarity we're being saved from now becomes commonplace, it will cease to be vulgar. At various times in our history, automobiles, light bulbs, phonographs and yes, even radios, were considered "vulgar"...a nice little word which in too many cases means "I don't like it, so it has to be banned."

Shield your children from vulgarity, if that floats your boat. Don't presume to shield me or any other adult from it, just because you don't want your children to hear it. That's not government's job. That's yours.

This trend began long before Clear Channel...

196. Amateur Radio Newsline™ Report 1379 – January 16, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-01-19 00:57:49 UTC
From: radionews@aol.com
Message-ID: <bufa2d$6ce$1@xuxa.iecc.com>
Source record: 6240

Amateur Radio Newsline™ Report 1379 – January 16, 2004

The following is a closed circuit advisory for Amateur Radio Newsline bulletin stations. It is not necessarily for broadcast.

According to Support Fund Administrator Andy Jarema, N6TCQ, Amateur Radio Newsline has only received enough funding of late to keep the service going for another month or so. In other words, the bills from last November have been paid , but now money has to be raised to keep from loosing the phones and e-mail service from bills accrued in December.

Andy says that Newsline continues to exist hand to mouth on a week to week basis. He says that It is up to you and the listeners to make sure that it is funded so that it can continue to provide this vital service. Otherwise he may soon be forced to pull the plug.

Please help us to keep The Amateur Radio Newsline on the air. Our address is the Amateur Radio Newsline Support Fund, Post Office Box 660937 in Arcadia California. The Zipcode is 91066. Again and as always, we thank you.

That ends the closed circuit advisory with Amateur Radio Newsline report number 1379 with a release date of Friday, January 16, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL Board meets to discuss the future of ham radio and lots of news on the B-P-L front. Find out the details on Amateur Radio Newsline report number 1379 coming
your way right now.

RESTRUCTURING: ARRL BOD MEETS IN CT JAN 16-17 TO DISCUSS WRC-03

Look for some major changes in the structure of the United States Amateur Radio service to be proposed or at least put open to study. This as the American Radio Relay Leagues Board of Directors holds its first annual meeting of 2004 as this newscast goes to air. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, reports:

--

What’s to come under the ARRL Board of Directors scrutiny? The ARRL Letter points to the big item being the implementation of changes in US Amateur Radio rules. This, in the wake of World Radiocommunication Conference of 2003.

Among other significant changes, W-R-C 03 delegates agreed last summer to leave up to individual countries whether to require a Morse code test for access to

amateur high-frequency allocations. Several nations have already dropped the code testing requirement for High Frequency access. In the United States, the FCC last year invited public comments on 14 Morse-related petitions for rule making, but it has not yet acted on the issue. When it meets, the ARRL Board is expected to discuss in detail recommendations in response to W-R-C 03 that were developed during last November's meeting of the ARRL Executive Committee.

Most observers generally believe that there will not be any major action by the FCC to implement W-R-C 03 changes until it hears from the League. This Board meeting is expected to generate an ARRL position that will be transmitted to the regulatory agency, but you will have to wait until the meeting is over and the League issues its own statement to find out what that position is. We suggest you keep an eye on www.arrl.org the next few days for any breaking news on ARRL Board decisions.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ, in New Jersey.

--

Among other actions, the Board also will elect members to the Executive Committee and appoint three directors to the ARRL Foundation Board. The Board also will elect officers for the next two years. Incumbent President Jim Haynie, W5JBP, has indicated that he plans to run for a third term. (ARRL Letter, others)

**

RESTRUCTURING: IARU REGION 1 TO MEET IN FEB

Meantime the International Amateur Radio Union will be holding its next regional conference in a few weeks. Q-News Graham Kemp, VK4BB, is here with that story:

--

The Twelfth Regional Conference Is being held from February 16 - 20, 2004 in Taipei, Taiwan. There are Working Groups, where most if not all the business is discussed and these run parallel to one another. A wealth of information is exchanged on the floor at these Working Groups.

There are formal discussion times and of course many informal discussions and gatherings such as over meals and receptions and so on. Contacts made at these conferences assist when an issue comes up back home, help can be sought on a first name basis.

There will be workshops on two important topics. The first is a Workshop on WRC 2003. It will include a detailed discussion on the new Article 25. To facilitate the discussion, a paper by Michael Owen VK3KI is being circulated with the Conference papers so that all societies will be able to make an advance study and brief their delegation on issues to raise and matters for seeking clarification.

The other Workshop will be on The Society's IARU Liaison Officer. The Workshop will help gain a better appreciation of the duties and responsibilities of the

Liaison Officer and hopefully lead to greater satisfaction from the work carried out by Liaison Officers.

Graham Kemp, VK4BB, reporting.
--

More information on this upcoming conference can be found on-line at the Japan Amateur Radio Leagues website at www.jarl.or.jp/iaru-r3 (Q-News)

**

THE BPL FIGHT: AUSTRIA TURNS OFF ITS BPL

And a big win overseas on the B-P-L front as reported by the ARRL Letter. The Austrian Amateur Transmitter Federation says that a Broadband over Power Line field test in the city of Linz has been cut short as a result of excessive radio interference. According to the national ham radio society, the Government Ministry for Commerce, Innovation and Technology closed down Linz Power Company's B-P-L pilot project because it was generating interference on the HF bands.

Shortwave broadcaster Radio Austria says the case that brought the issue to a head was a Red Cross report. One that documented that emergency services radio traffic during a disaster response drill last May was the victim of massive B-P-L interference. According to the broadcaster, measurements were said to have indicated that radiation from the B-P-L system exceeded permissible field strength levels by a factor of 10,000.

Last fall, Linz amateurs and their national leaders got together with power company representatives in an effort to resolve BPL's incompatibility with High Frequency ham radio operation. The meetings followed news reports of interference to emergency service communications and QRM complaints from several area hams.

The Commerce Ministry Order not only means the end of the Linz B-P-L pilot project. It also perminently curtails any future the deployment of this technology in Austria. (ARRL)

THE BPL FIGHT: PANASONIC TO INTRODUCE HOME BPL SYSTEM

A form of Broadband Over Powerline may be coming to a house near you. This as Matsushita Electric announces that it has developed a high-speed home power line IP networking technology capable of high-definition video transmission.

Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

Best known for its Panasonic-brand products, a newly developed Matsushita Electric technology will make it possible to provide broadband connectivity to every room in a house via existing home power lines. This, using an Panasonic branded adapter about the size of an audiocassette that the company says cannot be interfere with by radio amateurs.

The adapter contains a power plug, power supply, LAN connector and an L-S-I chipset that converts broadband data into signals that can travel over a power line. The unit connects a broadband Internet link such as D-S-L or optical fiber lines to the existing power lines in the home. According to Panasonic, a user simply plugs the P-L-C adapter into any AC power outlet to create a home broadband networking without installing new cabling.

The most interersting claim being made by Panasonic is that the new technology it calls H-D P-L-C resists interference from other signals such as those from ham radio that the company says often use the same frequencies as wired communications. In order to realize this capability, Panasonic claims that it combined Orthogonal Frequency Division Multiplexing and Wavelet technology to reduce the noise caused by the interference down to one-fifth of typical noise levels. This the company says creates a proprietary interference-resistant and ultra-high-speed modulation-demodulation method without use of additional filter circuitry that eliminates the frequencies where interference is likely to occur. What impact that this new technology will have on over-the-air radio reception by hams and other spectrum users is not addressed.

Panasonic expects to introduce P-L-C adapters for both consumer and office use by the end of 2004 providing that the HomePlug Powerline Alliance determines a final specification in the summer of 2004. An L-S-I chipset will also become commercially available at the same time.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

Matsushita Electric and its Panasonic subsidiary exhibited this new Powerline Communications technology at 2004 International CES held last week in Las Vegas. Both companies are members of the HomePlug Alliance which has been working with the ARRL to notch out amateur frequencies from its powerline communications signals. THE BPL FIGHT: W1RFI SPEAKS IN PA

Meantime, one of the leading experts in the area of Broadband Over Powerline interference has made his thoughts known. Speaking at Frankford Radio Club meeting on in Philadelphia last Tuesday night, Ed Hare, W1RFI, said that B-P-L is not good news for the radio spectrum. Amateur Radio Newsline’s Mark Abramovich, N-T-3-V, was there and has this report:

--

When Ed Hare talks, amateurs and others listen.

During an hour-long presentation at the FRC's meeting on the University of Sciences campus here in Philadelphia, Hare made the case that Broadband Over Power Lines is a threat to the future of the hobby.

"If these B-P-L systems came to my neighborhood, HF Amateur Radio as I know it would be over," he explains. "I mean S-9 on multiple bands would seriously cripple me.

Oh, we've had more serious threats when Amateur Radio was shut down after the world wars, but this ranks up there with it in terms of the potential to cause harm to the types of Amateur Radio that many of us enjoy doing."

The reason: Hare says B-P-L field tests by a handful of electric utilities use power line systems to carry high-frequency or HF signals to homes and businesses to give them connections to the internet.

"My neighbor's computer system is a local interference problem," he says. "I'm not going to hear the one three blocks up the street.

But Broadband over Power Line, they're going to intentially conduct those signals onto the overhead lines that will run through my house and then they're going to build this as big as an entire neighborhood. Clearly it has a different interference potential."

Hare says he's charted the interference on 20-meters, calculating it on a national and worldwide scale should B-P-L be rolled out.

"The ability of HF to sustain worldwide communication if you have 30-microvolts per meter of noise will not exist," Hare says.

He says the interference potential goes beyond the ham bands.

"This will affect military spectrum, this will affect international broadcasting spectrum, this will affect other government spectrum," Hare says. "This will affect commercial HF spectrum and as I tune outside the ham bands, you know what? That's not a radio wasteland, there's a lot of stuff there."

And, Hare notes, there's serious concern about medical-diagnostic devices.

"I go to my doctor's office, it's a house in a residential neighborhood," Hare says. "And he's going to hook me up to the E-K-G machine to find out whether I'm going to die before the end of the day. And, if that thing's interfered with, maybe I'll get a false positive or a false negative."

Finally, Hare says the amateur community is not alone.

"I'm very pleased to see groups like FEMA, NTIA and others getting involved with this saying essentially the same things ARRL is doing based on their work," Hare says.

"They, too, see a serious inteference potential to HF that needs to be addressed before B-P-L could ever be considered in any way."

For Amateur Radio Newsline, I'm Mark Abramowicz NT3V in Philadelphia.

--

More on the fight to stop B-P-L in future Amateur Radio Newsline reports. (ARNewsline(tm))

RESCUE RADIO: NIUE DEVASTATION REPORTED BY HAM RADIO

>From the rescue radio file, word that radio amateurs became a lifeline when tropical cyclone Heta ripped through the tiny island republic of Niue two weeks ago. The storm left the tropical paradise with no regular means of communicating with the outside world and summoning much needed relief aid. Enter ham radio.

According to news reports, a radio operator on the island put out a a call for help which was answered by Steve McCully, W7TZ/ZF2CQ, in the California community of Oak Hills. In fact, it was McCully who phoned the New Zealand Consul General in Los Angeles and provided that government with its first notification that Niue had been ravaged by 186 mile per hour winds.

**

RADIO ALLOCATIONS: RULES FOR 5.9 GHZ INTELLIGENT TRANSPORTATION ADOPTED

The FCC has adopted service and licensing rules for the 5.9 GHz Band for Dedicated Short Range Communications or D-S-R-C. This, from 5.850 to 5.925 Ghz in the Intelligent Transportation Systems Radio Service.

According to the Commission, DSRC systems will provide a limited-range, wireless link to transfer information between vehicles traveling at high speeds and roadside units or other vehicles. Some examples include intersection collision avoidance, work zone warnings, road condition warnings, electronic toll collections, and electronic payment for gas, fast food, or parking.

More is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242309A1.doc (CGC)

**

ENFORCEMENT: 10 METERS NON-HAMS IN THE SOUTH PACIFIC

Three new non ham radio intruders to the 10 meter band have been monitored down-under by Wayne Featherstone VK4ZRT. All appear to be Asian in location and all operate the A3E mode at around 0700 U-T-C. Listen for them on 28.215, 28.225 decimal 25 and on 28.285 Mhz. (Q-News)

**

ENFORCEMENT: $5.4 MILLION DOLLAR FAX FINE

Some good news for anyone who is sick and tired of getting unsolicited junk faxes. Federal regulators approved a record $5.4 million fine against a company for faxing unsolicited
advertisements to consumers.

The five-member commission unanimously approved the penalty on Wednesday, December 31st but did not announce its decision until Monday, January 5th. The FCC said Fax.com accrued the penalty because it violated the rules 489 separate times incurring an $11,000 fine for each instance. In affirming the fine the commission rejected arguments from Fax.com that the ban on unsolicited faxes was unconstitutional and that the fine was excessive.

The Federal Communications Commission said the fine given to Fax.com, Inc. was the largest ever for violating do-not-fax rules that went into effect in 1992. Fax.com sends faxes on behalf of clients that pay a fee. Its website claims that the company offers the industry's largest fax number database of more than 30 million numbers. Company officials did not immediately respond to a requests from the media for comment. (FCC)

**

COMMUNICATIONS LAW: BLAME THE COMPUTER

Prosecutors looking to throw the book at accused computer hackers have come across a legal defense. In four words, “the computer did it.” And in this era of hijacked PCs and laptops, jury’s are believing it.

In one case in the U-K, nineteen year old Aaron Caffrey was recently acquitted on charges of hacking into the computer system of the Houston Pilots back in 2001. Houston Pilots is an independent contractor for the Port of Houston.

Caffrey had been charged with breaking into the system and crippling the server that provides scheduling information for all ships entering the world's sixth-largest port. Although authorities traced the hack back to Caffrey's computer, he claimed that someone must have remotely planted a "trojan program" onto it. That it was the trojan and not him that did the hacking. (Published reports)

HAMFESTS AND CONVENTIONS: THE 44TH MIAMI TROPICAL HAMBOREE

Turning to the hamfest and convention scene, the 2004 season really kicks off the weekend of February 7th and 8th. This, when the doors of the Miami Dade County Fair Expo Center in Florida swing open to welcome the 44th Tropical

Hamboree.

This years Hamboree has a long list of great programs with speakers that include such notables as ARRL President Haynie W5JPB, FCC chief rules enforcer Riley Hollingsworth K4ZDH, IARU President Larry Price W4RA, CQ Communications' Rich Moseson W2VU and Radio School's Gordon West WB6NOA. They will take part in a free form round-table discussion of the future of the Amateur Radio service. Moseson and West will later join Florida’s own Sherri Bower, W4STB, in the conventions Public Relations Forum.

Attendees will also get to hear the latest DXpedition Adventures presented by South Florida DX Association and learn about Amateur Radio at the National Hurricane Center. There will be lots of vendors and all the other niceties that make the Miami Tropical Hamboree a must attend on the convention circuit. The event is sponsored by the Dade Radio Club of Miami, Inc. More information is on-line at www.hamboree.org (Tropical Hamboree)

**

HAMFESTS AND CONVENTIONS: CHARLOTTE COUNTY HAMFEST

Meantime, March 6th is the date for the Charlotte County Hamfest in Englewood, Minnesota. Sponsored by the Englewood Amateur Radio Society, the event will feature swap tables, tailgating and overnight hookups for those bringing a recreational vehicle. The venue is the Charlotte County Fairgrounds and you can find out more in cyberspace at www.earsradioclub.org (Worldradio)

**

HAM RADIO IN SPACE: AIR LEAK ON ISS LEADS TO CONTACT CANCELLATION

A small air leak on board the International Space Station forced cancellation of the Monday, January 12th scheduled contact with the Armstrong Middle School in Flint, Michigan. The I-S-S recently began experiencing the slight loss of air pressure, which the crew had to locate and repair. This meant that they had to devote all their time to resolving this issue using special ultrasonic monitoring. The leak was located and repaired late the same day. Contacts missed are in the process of being rescheduled. (ARISS)

**

HAM RADIO IN SPACE: UPDATE ON OPERATIONS FROM ARISS

We also have an update on what’s happening with the new radio gear on board the International Space Station and why hams on the ground heard un proto packets for a while. Amateur Radio Newsline’s David Black, KB4KCH, is here with the details:

--
Frank Bauer, KA3HDO, is the Chairman of ARISS. Amateur Radio on the International Space Station. And Bauer says that he has been sifting through the many e-mails he has received over the past few days regarding ham radio operations from the orbiting outpost.

Bauer says that the new Kenwood D 700 radio recently delivered to the ISS is still in what he terms as its "raw" form. In other words, the ARISS team has not yet run a formal engineering checkout of the new hardware and the ISS crew has not gotten the operations procedures uplinked to them.

According to Bauer, at this point in time the Kenwood radio system is not properly configured for digital operations. A reconfiguration change occurred after it was brought on line which has led to this issue. So, what hams see in the way of packets coming from the station right now will probably not be what they will see in the future.

As to the signal fading problem Bauer says that its probably due to the antenna that’s currently in use. The astro-hams are now using the new antenna system located on the Service Module and is a single, bottom mounted unit. Since the structure of ISS is very large, it is quite possible that the ham radio signals are getting some blockage.

Bauer says that ARISS will continue to evaluate the antenna system performance. He notes that there are now 4 antenna systems that can support 2 meter and 70 cm operation. This says Bauer gives a lot of possibilities with the antennas, including signal splitting, if need be.

As to the packet signals heard during a recent school contact? Those who heard it heard history being made. The first ever multiple radio operations from the International Space Station. While the older Ericsson radio system was doing the school contact, the new Kenwood radio system was active doing packet. It was also -- perhaps -- the first man made Q-R-M from space.

For the Amateur Radio Newsline, I’m David Black, KB4KCH

--

Bauer says that the astro-hams kind of surprised everyone on the ground by getting the radio system installed much earlier than they had anticipated. As a result, the Amateur Radio on the International Spasce Station team has been working feverishly with the space agencies to get the procedures uplinked and engineering checkouts scheduled. (ARISS)

**

INTERNATIONAL - INDIA: HAM RADIO AT THE CHILDREN’S SCIENCE CONGRESS

On the international scene, ham radio was a part of India’s 11th National Children Science Congress. Organized by the an educational group in the city of Lucknow the event ran from the 27th to the 31st December with more than 2000 students, teachers and science promoters from various parts of that nation taking part.

According to VU2DCT, Lucknow hams were also called by program organizers to give the demonstration on Amateur Radio for the benefit of participants. Most of attendees were astonished to listen a live QSO between VU2WAP and a ham in Columbia, South America. During their presentation the hams emphasized the role of Amateur Radio in disaster situations. (Q-News)

**

INTERNATIONAL - SOUTH KOREA: HOMEGROWN SOFTWARE IS BEST

South Korea is considering requiring mobile phone operators to use locally developed software for downloading music and games. According to news reports, that nations Information and Communication Ministry is pushing for the compulsory use of in-country developed software for downloading on new mobile phones in order to standardize the wireless Internet platform.

South Korea is Asia's third largest mobile market and one of the fastest-growing wireless Internet markets. As of the beginning of 2004 there are 33.44 million mobile phone subscribers, or about 70 percent of the country's 48 million population. (Science Today)

**

DX

In D-X, word that the Five Star DX’ers Association has announced plans for a very large-scale DXpedition to Rodrigues Island in March and April next year. The callsign will be 3B9C. An international team of nearly 30 will operate no fewer than 15 separate stations will take to the air on virtually every band and mode possible. The Five Star DX’ers Association is the same group that organized the very successful operation from the Spratly Islands in 1998 and the subsequent record breaking D68C DXpedition to the Comoros in February 2001. (IRTS)

Also, word that DJ4KW and D-K-9-G-G will be active from Belize until the end of February. Callsigns being used are V31YN on CW and V31GW on RTTY. Activity is on 160 through 10 meters. Please QSL as directed on the air. (OPDX)

And for those of you who perfer your D-X and D-X awards a bit higher in frequency, Peter Heins, N6ZE says that he will be able to conduct VUCC field checking in Springfield, Massachusettes several times during the next few weeks. You must be a current ARRL member to avail yourself of this service. Those wanting to take advantage of Pete’s offer should e-mail him as soon as possible to n6ze@aol.com (N6ZE)

**

THAT FINAL ITEM: THE POTTY MOUTH AND THE VURGER

And finally this weeek, customers at a Troy, Michigan Burger King are getting something extra with their orders that’s a little harder to swallow than a hamburger and fries. And its coming by radio. Rick Johnson, KA9VZD, is here with a complete menu on this one:

--
The Detroit News is reporting that police in nearby Troy are looking for the person who has found a way to broadcast on the same frequency as a local Burger King drive-through radio system. The jammer has interrupted business transactions with obscene remarks on several occasions that have startled customers.

The most recent incident took place on January 8th. It happened when the manager went outside to apologize to customers and look for the source of the

salty talk. Suddenly a voice boomed from the speaker and said -- quote: “There’s nothing you or the police can do about this, so get your fat -- err -- lets say posterior -- take your fat posterior back inside and take your goons with you.”

Police suspect the calls are being made by a mobile radio transmitter or walkie-talkie in the vacinity of the restaurant. Illegal use of any telecommunications device is a misdemeanor in the city of Troy. And as we all know, its also a serious violation of Federal law.

Heading out the door for some fast food, I’m Rick Johnson, KA9VZD, reporting for the Amateur Radio Newsline.

Hey -- can you make that a double cheeseburger and a double order of rings. Yeah and hold the mayo....

--

Sounds as if the story made Rick a bit hungry. And oh yes. Troy police say that they have the FCC for assistance to track down this all beef potty-mouth with a mustard laced tongue. (ARNewsline(tm) from vasrious sources)

>Infinity and the spanish blasters.

Correction: XM will add traffic channels (I believe 15 major markets)
and remove commercials from their music channels. Commercials will
still appear on non-music channels.

You're going to have to deal with Clear Channel one way or the other.
Clear Channel is a stockholder in XM. You're going to listen to them
whether you like it or not; whether you pay for them or not.

I suspect Clear Channel, Infinity and the "Spanish blasters" will do
just fine even with the loss of a signal in a suburb of New York. I
liived in Greenwich Village for 20 years and, not once, was I able to
receive WLIR.

Look, save the preachy shit. A liberal is a conservative who hasn't been mugged yet.

Tell me again why it's a good idea that everyone is allowed to say fuck on the radio or TV? Pfft...have someone read aloud to you the shit that you leave here because even though it's coming out of your head, I don't think you're getting the full effect of it.

I'm not in favor of "saving" anyone from vulgarity. I'm only in favor of not subjecting them to it. You want vulgar, you have plenty of places you can wallow in it. One of the definitions of vulgar is "common". So go be common all you want. I don't presume to shield you from anything at all. I just think if you want it, you ought to have to seek it out. Because you place importance on it doesn't mean reasonable folk ought to be awash in it. There's no place for it on public airwaves. And on top of all that, Bono is an asshole.

John Webster

>you don't care...or even welcome...if someone is allowed to take them further
>along the path of de-sensitization? Championing someone's right to be vulgar
>boggles the mind. I'm embarassed for you.

Since the Constitution "champions" someone's right to be vulgar I
think we're in good company. As I recall, the Supreme Court declared
that people didn't have the right not to be offended. I think you
might want to save your "embarrassed for you" effort for violence
rather than sex. It appears that human bodies are more beautiful when
riddled with bullets or slashed by knives.

If you really want to prevent your kids from learning vulgar words
take them out of school and off the street. That's where they learn
them, not from radio and TV.

Unless, of course, you have cable or satellite radio. One of the
biggest barriers to stemming the loss of over-the-air TV audiences is
the fact that they can't run the kind of programming that's so popular
on premium cable channels. Satellite radio is free to be as obscene as
they like. You'll have to spend weeks watching and listening to cable
and satellite radio to know which channels to lock out. Then you'll
lock out an entire channel because of one or two shows.

>Please save the "it's up to you what your children watch" and "there's an
>on/off switch on the TV you know" argument. To welcome vulgarity over public
>airwaves will quickly lead to saturation and there will soon be nothing to
>watch or no choice to make that doesn't include it. Talk about the decline of
>civilization...

What do you mean by "quickly?" We've been having this argument since
cultures carved naked images on cave walls. Greek and Roman cultures
celebrated eroticism. Please save the "sex caused the fall of the
empire" argument until someone can actually prove that's why it
happened.

As I recall, the former Soviet Union was one of the most sexually
repressive cultures ever. They fell. So, we can make the counter
argument that lack of sex destroyed their empire. We all know it's
much more complicated than that.

I think a few weeks with the History Channel might change your perspective. Compared to much of history I think we're a pretty civilized bunch.

Rich

200. RE: The Radio Crazy.....AM stations for sale, etc. I am not a crook!

From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <bufa2k$6fs$1@xuxa.iecc.com>
Source record: 6236

I want to thank those who took my side with respect to raising funds to acquire small market AM stations.

As I said before, I am not an agent, shill, broker, owner or part owner. I am DEFINITELY not a crook!

For those who don't know it, my last job in radio (2001) was Chief Engineer for a 5 KW fulltime AM in New York City. Would you trust a $45 million dollar plant to a crook?

I was the founder and past President of non-commercial KPOO FM radio in San Francisco, CA. It is on the air since 1973. Senator Dianne Feinstein (Dem.)gave me a written endorsement circa 1971. She almost was Bill Clinton's running mate in 1992.

73,

Meyer Gottesman, W6GIV

>I'm not in favor of "saving" anyone from vulgarity. I'm only in favor of not subjecting them to it.<

Guess what? NO ONE ASKED YOU TO!

Attitudes like yours are making the founders spin in their graves. Just because a word offends you is no reason to ban it. They understood that. Obviously you don't.

>I just think if you want it, you ought to have to seek it out.<

Once again, that isn't your call. Nowhere in American law or jurisprudence has it ever been established that "vulgarity" is not protected by the First Amendment.

>And on top of all that, Bono is an asshole.<

That would actually be a funny comment if it weren't so pathetic. Bono actually did us Americans a great service. He exposed once and for all the rampant puritanism and over-extended noses in this country that seem to want to be stuck in everyone else's business. He brought the petty moral arbiters out of the closet and into the limelight, where they can be exposed for the bigoted busybodies they are.

At a time when we're threatened by global terrorism, when we're fighting a war in a foreign country, when our president is spending our children's money worse than any Democrat of the past 25 years, the chairman of the FCC and a few assorted Congress-creatures are hung up over a word. I'd better laugh about it now before I start crying.

>with a power supply (model PS-3015B or PS-3015C). I'd love to find
>schematics for the power supplies, too.

The power supplies are brute-force linear supplies with series regulation.
Nothing fancy, just dual regulated supplies with a zener and a junk pass
transistor; you can find an identical design in the ARRL Handbook.

The germanium transistor amps are sort of doubtful, but whatever you do,
replace the coupling capacitors. As I recall, they do use real bias
resistors instead of relying on leakage like some more sleazy designs of
that era.

>I was originally planning to harvest the transformers and throw away
>the rest, but I might keep them intact since they're apparently pretty
>rare (at least I've never seen one before) and just might sound cool.

Try it. Those things were very common in the video industry, and you know
how video guys feel about sound...

>> children to hear it. That's not government's job. That's yours.

>Preach it, Brother!

The debate about vulgarity and innocent ears misses a larger point:
broadcasting is supposed to be a service to the public. The overwhelming
bulk of what I've heard lately on the radio surely serves no one but
stockholders and creditors.

The experience of the past 20 years shows that an unregulated marketplace
leads to a "race to the bottom": programming that informs and uplifts
gives way to programming that shocks and titillates. The proliferation
of stations and subsequent ownership consolidation has led inexorably to
"narrowcasting" to tiny slices of the demographic pie across community
lines instead of broadcasting to a whole community; hence the replacement
of local full-service stations with "cookie-cutter" formats repeated on
station after station from coast to coast.

Talk radio is a wasteland; from one-sided ranting and uninformed
speculation about important (and not-so-important) events to snake-oil
informercials and "sex for Sam" contests, there's very little there to
benefit the listener.

Music radio has become a soulless, robot-driven monotony; the marketers
and research pseudoscientists are in the driver's seat, it would seem.

In Boston, one company supplies virtually every radio station in town
with news. And it does a spectacularly poor job.

I submit that this is what you get when you "deregulate" the public
airwaves into a commodity that can be freely bought and sold.

Society has an interest in managing the radio spectrum for the benefit
of all its members. When it surrenders spectrum to private companies
without obliging them to operate in the public interest, it does us all
harm. The mass media are one of the principal means by which we as
members of society share cultural, social, and artistic values. Misused
by someone with narrow self-serving goals, the media can do a lot of
damage. I've heard several broadcasters claim their programming only
reflects the prevailing mood and mentality of their audiences and doesn't
influence them; I think these broadcasters must be deceiving themselves.

After all, what advertiser would want to use radio if it didn't influence listeners' buying habits?

In my view American radio is off the rails, and the indecency issue is just a small symptom of the much larger problem.

For sale:

(It is baaaaaaaaaak!!! The "Radio Crazy" is loose!)

Partial ownership in 1 KW daytime AM station near
Albany, NY. College town. Some night power. Lots of
valuable land included.

Only $120,000 asking price.

Joint venture. Active or inactive investors with at
least $10,000 min. are welcome. All investors would be
on the board with full voting rights if desired.

No individual may own over 49 percent. This to protect
from "bullies". This rule applies to me, too!

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, February 15, 2004 - WQMA-1520, Marks, MS will conduct a DX test from 12:00am-2:00am CST. Per information from WQMA announcer Paul Walker, Jr. (via DXer John Lentz of Muskego, WI), "WQMA will be conducting a DX Test on February 15th at 12AM Central...1520Khz with 250 watts ND.
WQMA Marks, Mississippi in Northwest MS....about 65 miles south of Memphis. 150 foot Rohn 25 Tower, guyed...Armstrong X1000 Transmitter....Harris Mono 5 Rotary Pot". The station, normally CHR, will run "special programming" during the test.

Reception reports may be sent to:

WQMA / Q1520 Radio
1820 West Marks Road
Marks, MS 38646

WWW: http://www.q1520radio.com/
Also, please see
http://myweb.cableone.net/jkonarz/q1520radiocom/test.html for some information about recording the test.

(Arranged by Paul Walker, Jr.)

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

This is a completely valid, but also completely tangential, point.

I think that if we are going to rant about *this* topic, it should be done
in a separate thread.

[Excellent points snipped]

I have no problem with vulgarity. It's readily available for anyone interested and whatever floats your boat, but on public airwaves is not the place. Do you believe that most people would not object to vulgarity on any/every station they flip through on the radio or that they watch on television? That no one would care if vulgarity were commonplace on public airwaves? I think you're so far left you're slipping off the edge.

The program is Streambox Ripper. I believe it's no longer available from Streambox because of legality challenges from Real. But unsupported copies are around the web. Alternatively, you'd play the file in RealOne, or preferably the Real browser plugin, while using an MP3 encoding program that captures from your sound card mixer.

And of course the reasons to do this are:

1) Real's tight control over its proprietary format
2) An unwillingness to harbor on your PC Real's obnoxious, buggy, maddening and intrusive RealOne software.
3) A desire to enjoy the content on the tens of millions of MP3 or MP3/WMA devices out there that don't support the Real encoding, such as car CD's, headphone units, DVD players.

But that is the reason why the stuff was encoded with Real in the first
place, to prevent this from being done. Realaudio exists so that the
folks that created the file have control over how it is decoded.

If you don't like it, don't encode with Real.

You can, of course, use a differant program to record the sound while you play in realaudio. This is a real-time conversion as the real audio plays.

I use a free program called Audacity, which has a plugin to convert wav to MP3 format.

The reason to get MP3 is, of course, is so that you can play the audio on a device which doesn't handle wav or realaudio.

CBC, for example, makes Quirks & Quarks available for download in .ra form. They happen to make it available in Mp3 and Ogg as well. Of course they don't want you redistributing this program, but the mere act of encoding in .ra isn't evidence the content provider doesn't want you to listen on the device of your choice.

There is quite a bit of .ra on the web that can be streamed but not downloaded, and I do accept that the content provider doesn't want you storing that stuff. But I'm pretty sure common law will allow you to record it to your VCR, let's say, for personal use.

Saying "fuck" on radio or TV is such a liberating and expansive breath of
fresh air. Are you only pretending you don't get the point or are you serious?
Why should the majority need to search the public airwaves to find something
that doesn't offend them? If "fuck" doesn't offend you, you're free to find
the "fuck" channel, but the rest of us shouldn't be subject to it because
people without a sense of decency nor even a vestige of moral compass beat
their chests and trot out their left-wing rote Constitutional rights speech.

>please don't expect anyone to believe that you know what "the founders" understood or meant in any instance where they didn't spell it out. Everything goes because you can't find words that say otherwise?<

Unlike you, I can read English...the same language the Constitution was written in. "Congress shall make no law...abridging the freedom of speech, or of the press..." is pretty plain.

>Do you believe that most people would not object to vulgarity on any/every station they flip through on the radio or that they watch on television? That no one would care if vulgarity were commonplace on public airwaves?<

Oh NOOOOOOOOOOOOOO!!! We have to be kept SAFE from VULGARITY on the PUBLIC AIRWAVES!!!! The republic will collapse because someone used the f-word!!!!!

Just keep digging yourself in deeper. At least you're good for some entertainment.

>I think you're so far left you're slipping off the edge.<

Since you obviously require a clue, it's the RIGHT that claims to be in favor of less governmental control over our lives (regardless of whether or not that's actually true in practice). They should be the first ones to oppose efforts to dilute the First Amendment. Instead, ever increasing numbers of right-wingers have turned into the Carrie Nations of language, aided and abetted by people like you.

BTW, it's a pity that you haven't learned more about the great American orator whose last name you share. He's one of the people spinning in their graves, seeing what's become of his concepts of freedom and liberty. You could actually learn something from him.

This past weekend I heard a station broadcasting on 87.9 fm in the NYC metro area. It played reggae music Saturday a.m. I tuned in Sunday and it was on the air. Come Monday and Tuesday - no signal.

Anybody know anything about this station?
Exactly, what kinds of stations - commercial, non-commecial, lpfm - are allowed to broadcast on 87.9?

EKSMITH

How can you be sure your opinion is that of the majority. I used to
enjoy watching members of the "Moral Majority" sneak into porn shops
and bars in Dallas because they came from the Chriswell Baptist Church
"dry" and pure side of town.

>If "fuck" doesn't offend you, you're free to find
>the "fuck" channel, but the rest of us shouldn't be subject to it because
>people without a sense of decency nor even a vestige of moral compass beat
>their chests and trot out their left-wing rote Constitutional rights speech.

Actually, it used to offend me, but now it means nothing. I find it
tasteless, but many have survived lack of taste. I also find that the
word has no bearing on moral compasses.

Things that make moral compasses twirl off their bearings are things
like Enron, Worldcom and the pillars of the community who, secretly,
rip us off and destroy our trust in our employers, brokers and clergy.

I agree with Sid that the people who should be protecting our freedoms
are true Conservatives. We have very few of those today. When you find
one he or she is usually ridiculed by the radical, controlling
neo-conservatives who are Hell bent on limiting out rights rather than
protecting them.

The complaints are usually religiously (family "protect the kids)
types who have no concept that their lack of guidance of their
children has led them into the hands of their peers who use vulgarity
even before they know what the sexual terms mean.

I also get a kick out of religious people who oppose gay marriage
because marriage is so sacred in a nation with a larrger than 50%
divorce rate. If it's so special and so sacred, they should be
encouraging couples of all descriptions to participate. It's not a
moral issue. It's a money issue. The gummint will have to require
equal treatment of people who pay the same, often higher, taxes than
those devoted straight married folks. It seems to me that those who
are excluded from the benefits that their taxes pay for should have
their taxes reduced because of reduced services.

Please don't bring up the issue of childless couples paying for
schools. They're not being excluded. If they had kids, they'd be

entitled to all the benefits schools provide.

I think Diogenes would wear out hundreds of pairs of sandals and waste barrels of kerosene, candles or other oils in his lantern if his charge were to find one true Conservative.

87.9 FM is called "channel 200." It is sort of in the FM band but it's a
special allocation. A station cannot be licensed for 89.7, but an existing
station can be moved to 89.7 in order to avoid interference if there is no
TV Channel 6 nearby.

Strictly speaking, this is in the guard band of TV channel 6, but it's also
in the FM band.

Almost certainly the station you heard was a pirate and not legally licensed
for that frequency.

What are your thoughts concerning the ban imposed back in the early 70's
on broadcast cigarette advertising?

...and for Rich Wood (or whomever might be current on the law), does
that advertising restriction apply also to cable? If not, why are there
no spots for the product in that medium?

in two words John - Fuck Off
where do you stand on violence - how much graphic gore will you tolerate?
Lets talk reality shows now in vogue - looking for the reality in the reality show - but to be honest - only watched one early reality show and do not watch any of these now - so maybe I am missing the real deal so you answer on this one - but they do seem to draw an audience which is the point of the show - lets think about this - audience - ratings - advertising $ - well - guess that if it do not sell, it is not on as "entertainment" and do not have ratings or air time - don't know - who is watching - besides you not watching - lots of someone's must be - wonder why. Do not agree with this at a personal level, but agree that should be available regardless of what I think concerning propriety.

I have absolutely no sense of decency or no "vestige of moral compass" though I am not sure what that means - please expand

Wow...we've wandered a bit OT. <grin>

I agree with Rich about the economic impact that the lack of marriage rights has for gay couples.

To tie this back into the morality arguments, I (as a gay man) think it's morally outrageous that, without serious documentation, it's difficult or impossible for me to visit my partner (of six years) in the hospital, have inheritance rights, property rights; etc.

My family are fundamentalist Christians, and because of their bigotry (and self-serving sense of morality) we've had to go to extraordinary legal lengths to protect our joint assets in the event of my death. Piles of legal documents and legal fees to protect the person I've shared my life with...if we had a legal marriage or even a civil-union, all of that legal work would have been unnecessary.

There's a great editorial this month in The Advocate magazine by a U.S. citizen who has been forced to live in the U.K. in order to remain with his partner of nine years because the U.S. government won't acknowledge their relationship and permit his partner to immigrate. It's naked discrimination - and it's morally reprehensible.

http://www.advocate.com/html/stories/907/907_symington.asp

Could a married heterosexual please answer this one question: How does legally recognizing my relationship threaten your marriage?

Alright - I'm off the soap box. Let's get back to radio, OK?

>Which is why we're about to watch Al Franken crash and burn.

No. If Franken crashes and burns it'll probably be because he doesn't have the infrasructure of his competing networks. If his backers accomplish what they claim he'll have stations in only a few markets compared to about 650 for Limbaugh. In New York, for example, Limbaugh has 50KW WABC. There are no such options for Franken. In Boston there are no talk signals comparable to WRKO or WTKK. Both are conservative and not for sale. Any station that might be for sale in Boston will be one of the close-in suburban brokered stations dying on the vine. In Chicago where they claim to have an affiliate it won't be comparable to WLS. At this point in time the playing field will not only not be level, it'll be vertical. All the major WABC, WLS, WRKO, KFI, KGO, KSFO quality signals have already been taken.

I was at ABC when we gave Limbaugh 2 hours of the ABC TalkRadio Network satellite time. It took well over a year for Limbaugh to begin to take off. It took longer than that to build the affiliate base and get the ratings he's got. He wasn't an overnight success.

I created the WOR Radio Network for Buckley Broadcasting. It was built one station at a time and took about 3 years to reach critical mass with non-political programming that fit all forms of talk. Franken will be political. His success or failure will be based on more than just his politics or abilities as a Talk Show Host.

Your prediction, to be fair, won't be proven either way for many years.

Rich

Al Franken won't last a year. By the way, did you hear about Al's little tizzy at the airport in Iowa Tuesday? From the ticket counter he didn't like the looks of the lonnnnnngggg line waiting to get through security. He told the agent he was going to miss his flight. The agent informed Al that he'd have to wait in line and hope for the best. Al, obviously put off by the whole episode, asked the agent, "Well, isn't there some mechanism in place for people like me?"

NAB Radio Board Wants FCC to Permit AM Nighttime IBOC Operation

The NAB Radio Board believes the FCC should authorize AM nighttime IBOC on an interim basis. In language approved at its semi-annual board meeting, members state: "The dramatically improved audio quality from IBOC service at night is well worth the predicted and limited reductions in analog coverage."

The FCC should "take steps to address those problems," state board members, should any AMs experience reduction in nighttime analog coverage "beyond those predicted by the studies." Presumably the AM nighttime data Ibiquity recently completed and delivered to an NAB committee working on AM nighttime IBOC issues.

NAB Radio Board Supports Leaving Codec Out of IBOC Standard

The standards-setting body, The National Radio Systems Committee, and Ibiquity Digital have been going back and forth over how much information Ibiquity needs to divulge so the NRSC can set its IBOC, or HD Radio, standard. Ibiquity has said that its new HDC codec is proprietary and unique. NAB SVP Science and Technology Lynn Claudy told the board Ibiquity is unable to disclose the technical details of the codec, in turn, delaying the standards-setting process.

The board decided to recommend that the NRSC should pursue "modulation and transmission" standards for AM and FM HD Radio, standards that include provisions for advanced data applications. All of these are elements Ibiquity can disclose, the technology developer told Radio World.

The codec would be left out of the standard, so "audio compression methods thus would be subject to selection by market forces," according to board minutes released by NAB.

Ibiquity says the HDC codec would still be included in the technology it licenses to broadcasters.

>no spots for the product in that medium?

1970 - Pub. L. 91-222 substituted provision that after January 1,
1971, it shall be unlawful to advertise cigarettes on any medium of
electronic communication subject to the jurisdiction of the Federal
Communications Commission, for provision that a violation of this
chapter should constitute misdemeanor and be punishable by fine.

I take this to include cable.

While I abhor cigaretes I find it hard to justify banning the
advertising of a legal product. If a product is deadly it should be
illegal.

People don't have to embrace it. They might hate it, and still keep listening.
Talk radio isn't about telling people things they agree with, talk radio is
about telling people things that keep them listening.

If people are horrified at what's being said, they'll keep tuning in just
as much as if they agree completely, maybe even more.

The name of the game is to keep them listening at all cost.

I can't argue with that. But I don't think he'd be able to hold even them long enough or in numbers large enough to matter. You're one hundred percent correct though, about "keep them listening at all costs". I just think that Franken and the left envision/hope for the kind of support that conservative radio hosts enjoy, that is, large numbers of people who share similar values...and if there were enough of them to make liberal talk radio viable, it would have already happened.

(The "Radio Crazy".....It is baaaaaaaaak!!!)

For sale:
Partial ownership in AM radio station. Location is upstate NY in small college town. Near Albany. 1 KW daytimer with PSA/PSSA and some night power.

Total asking price is only $120,000 and this includes transmitter land of about 11.5 acres plus transmitter shelter plus 192' guyed tower and two transmitters. Lots of modern studio gear. Station is on the air since 1981.

Joint venture. Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual can own more than 49 percent. That goes for me too!

I am NOT a shill, agent, broker, owner or part owner and even more importantly, I am NOT a crook!

References:
a-My parole officer. Mr. Larson E. Rapp. Zing Zing prison, Osstink, NY.

b-Brazilian Bandit Airways. (Purchased from them a one-way ticket to Rio using all unmarked small bills).

Please! No "AM bashers" or other negative nabobs.

Tel: (478)741-1710 in Macon, GA

Can't speak for Sid, but I think there's lots of junk on the airwaves. I, however, am one of those people who think that we have enough serious trouble right now with curtailing civil rights (and yes, freedom to say what you want is one of those rights) that we don't need to add fuel to the fire. Here are some examples --

Two words: Patriot Act.

Four letters: RIAA.

I personally think we have enough erosion of our rights that we have much more serious things to worry about than regulating the use of the word "fuck".

Thing is, the legislators and the idiot president who want to crawl up your butthole with an enema are using some of the same arguments that you are using to justify their actions.

Rich is right--WNTD is a 1,000-watt pea-shooter that was a daytime-only for many years. The last time there was anything drawing listeners on that frequency was when it was R&B WJPC (and WGRT before that) in the 70s. There was some pop in the mid-90s when it was simulcasting Barry Mayo's WEJM "106 JAMZ" hip-hop format (it then had the format to itself when the FM was sold to Crawford) and One-on-One tried to get listeners when they briefly owned the station, but it's been low profile, for the most part, including the current Spanish news-talk Radio Unica.

WBEZ pulled a 2.3 in the last book, good for middle-of-the-pack. The Pacificistas, of course, consider NPR capitalist sell-outs now, but Progress isn't really aiming their station at the Pacificistas, who would consider it too slick to begin with. If they can market themselves, they could at least get some curiosity listening going--but their signal will have a hard time reaching the North Shore, where a big chunk of 'BEZ's audience comes from.

Just ask Opie & Anthony. I'll bet every horrified listener was glued
to the radio during the "Copulating in the Cathedral" episode. Why
does traffic moving in the opposite direction of an accident slow
down? It's hard to rubberneck at 75mph.

Many Liberals listen to Limbaugh just to hear what he's saying about
them.

Rich

Untrue. It's never really been tried. As far as "similar values" are
concerned, remember that a conservative won the Presidency but lost
the vote. More people who actually voted wanted Gore.

If you actually believe that conservative talk listeners represent the
nation, you're smokin' some damned good stuff. Most of the population
does not listen to talk radio. I believe Limbaugh's highest rating
(percentage of the population listening) was a 4. That means 96% of
the population wasn't listening.

I believe most of the country is moderate. Probably fiscally
conservative and socially liberal. Even the most strident
conservatives are at least mildly upset over the deficit.

We don't really know that no audience exists. It's never been done on
the scale that's being proposed. Most of the liberal hosts have been
dull as dirt. Don't forget that there have been dozens of conservative
hosts who have bitten the dust even though they spouted the same stuff
as those who succeeded.

I believe that, if Franken takes this as a serious day job and doesn't
take time off for speeches, book signings and other non radio events,
he'll be a success when on a signal comparable to the other side.

I've had lots of experience with big name talent whose fame came from
elsewhere. They're very reluctant to be tied to a fixed time show five
days a week.

>Al Franken won't last a year. By the way, did you hear about Al's

Al isn't the first to feel special. There have been conservatives and
just plain famous people who felt they deserved special treatment. Do
a Google search on "special" people who have caused a ruckus when
confronted with a long line of little people.

I don't care how he acts at airports. I'm concerned with the
entertainment value of what comes out of the radio. No one ever said
assholes couldn't be talk show hosts, too.

Don't count on it -- much as it may amaze you, not everyone in this country is a brainless droid waiting for you to tell them what to believe.

The program will go on the air on some weak signalled stations, and will succeed or fail based on the merits of the programming quality, content, and yeah, the views expressed.

But don't count it out based on what you want to hear and believe, because thankfully you and your friends don't represent everyone.

Liberals don't seem to do as well answering unfiltered questions from callers. That's why Hillery's "town meetings" on CNN a few years ago had only pre-qualified questions. That's when I stopped watching CNN.

Not to mention, they had gays in the military thousands of years
before us.

Anyway, one thing I've noticed that these recent efforts to ban
certain words from radio only blacklist curse words in English. So I
guess the Spanish stations are free to be as vulgar as they want? I
haven't listened closely, but I've never heard them bleep anything
out.

But hey, I've heard uncensored curses (in English) and seen naked
boobies on PBS TV. So why can't radio be just as vulgar if it wants?

The radio spectrum is a public resource, and the public doesn't want
vulgarity on its airwaves.

The fact that there are some listeners who do want it is irrelevant.

Are you suggesting that Conservatives never require pre-qualified
questions? I've been in this business a long time and have encountered
many, many Conservatives who required not only pre-qualified questions
but wouldn't do it live so they could see or hear the final product
before it aired.

Yours is a stupid generalization. It depends on the talent of the
individual and his or her comfort with the media.

According to the History Channel they even encouraged it because it created a closer bond between soldiers. They didn't fear their weenies the way we do today. You might call it "Ask,Tell and pursue - each other."

>But hey, I've heard uncensored curses (in English) and seen naked

Some of us believe that the creator (whatever form she takes) wouldn't create something nasty.

When I was at WGBH-TV (I know, Liberal, Commie TV) in the early 70's we did a beautiful nude ballet for TV called "Targets." I was the booth announcer for TV that night.. The green rooms were just across the hall. Imagine my delight/surprise when I walked in to be greeted by a hallway full of beautiful naked dancers, male and female.

I had the piviledge of watching it being taped in the studio and, later, the finshed product. We didn't block out the "nasty" body parts. They were concealed by the brilliant lighting of Chas Norton.

Since I had seen body parts before and consider them inspired designs, I found the produced version with Chas' lighting to be the most compelling. I only wish I had had a VCR. I would treasure that tape. It was profoundly inspiring.

I believe most of the country doesn't give two hoots in hell about politics, period. Especially those in the so-called "money demographics" we're all chasing.

I maintain the political leanings of the host matter little. What matters is the entertainment value -- nothing else. If the "liberal network" forgets for one second that it's in the entertainment business, not the politics business, it will fail. Otherwise, it has as good a chance as anything else in this extremely fragmented media marketplace.

Well, the UAW has been running a liberal talk radio network for a fair number of years. It started with Chuck Harder's attempt at a network when he was living in the Telford Hotel down in Florida. They apparently bailed him out when he was running out of money, and they ended up removing Chuck (probably a very good move on their part).. and substituted a lot of other talent. They moved the operation to Detroit...

They never could get a large number of affiliates, and are shutting the operation down. I forget the URL, but I stumbled over it a few weeks ago after the demise was announced. All liberal talk, 24x7. And very unsuccessful.

Franken -may- be able to do better...but the chances of getting a good station line up are about zilch. It will be a nice money sink, just like the UAW attempt was.

I will also avoid it as much as possible. The software is full of bugs and installing it is a RealPain!
In one installation it caused multiple corruptions of the registry. It took a number of tries before it finally took.
At another station they desire to have CoolEdit Pro as their default player on the studio computers. RealOne always, on its own, modifies the file associations so *it* is the default player. Does anyone have any solutions for that one?

Yep - a lot concerning public airwaves too, but wonder what the % is of cable to
public today really is - guess your antenna is it correct?

> >Lets talk reality shows now in vogue - looking for the reality in the reality

Then explain to me why Howard Stern's in the top 5 among national commercial radio programs--despite being on one-fifth as many stations as Limbaugh (or fewer).

And why pictures of half-naked babes seem to have become a standard feature on classic rock/active rock/modern rock station web sites, most of them owned by the same conglomerates who also own--often in the same markets--"lite rock less talk" stations with "morning shows the whole family can listen to."

And (from your anti-Bush sig) when did the far left become so prudish while some of the far right have started embracing taboo-breaking behavior (like card-carrying Republican Mancow Muller)?

How do you know what "the public" wants? Vulgarity seems to work
pretty well on radio morning shows.

>The fact that there are some listeners who do want it is irrelevant.

Tell that to HBO and the other cable providers who are taking viewers
from broadcast TV because their content is more adult.

It's always foolish to claim to speak for "the public." You speak for
yourself and, maybe, a few friends you know well, but you have no idea
what I (a member of the public) will accept.

The top rated station in most markets has perhaps a 10% audience share.
If 10% listen, then 90% don't listen. Even the most popular show on radio
only appeals to a small minority.

I don't care what stations put on their Web sites, but the public owns
the radio spectrum and it's right and proper that the public, through
its elected representatives, should prescribe how it shall be used.

Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. (deleted)
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. (Deleted)
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at\ the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?
Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

---

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in

the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: andy@vintagebroadcasts.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But

not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request

to: Fred Korb, c/o Oldtime Radio Collectors and
Traders Society, 725 Cardigan Court, Naperville,
Illinois 60565-1202. I am willing to help you preserve
the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a
lubricating film can be automatically applied to the tape as it is
played. I tried it. Although temporary, it does indeed work! I'd
recommend it for those squeaky tapes that you wish to re-record onto
newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info
about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the
backing, or the binder compound used to stick the magnetic
particles to the plastic backing -- has absorbed water
from the air. The water molecules actually make the tape
expand a bit, so it doesn't fit the machined tape-guides
properly anymore; and they can interfere with the
lubrication impregnated into the tape; and it is theorized
they can even interfere with the polished smoothness of
the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the
formulation of the plastic backing and binder. In the
mid-70s, both 3M (Scotch) and Ampex, the two major tape
manufacturers, started experimenting with their formulas.
They thought they were introducing major improvements,
but instead created a tape much more prone to
hydrolization than anything had ever been. The problem
did not show up for years, and the formulas did not get
corrected until sometime in the mid-'80s. Theoretically
any tape could get hydrolyzed over a long period of time,
especially if stored in a high-humidity situation, but in
practice most squeaky tapes were made (roughly speaking)
between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and
entreprenurially successful producer of radio drama in
the US today) gave me his formula and I've done it many
times now and it works:

Bake the tapes in a convection oven for 8 hours at 130
degrees Fahrenheit. It is entirely possible to bake a
tape twice if the first time doesn't do the trick. You
get about a three-week "window", sez Tom, before the tape
starts to re-absorb water. So the best deal is to bake
the tape and immediately make a copy. But if you forget
to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164

Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you.

Here is a list of some of the WWW sites for modern audio drama:

Jim French Productions (Imagination Theatre):
http://jimfrenchproductions.com/
Atlanta Radio Theatre Company:
http://www.artc.org
ZBS Media:
http://www.zbs.org/zbs.html
LodesTone Productions:
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop:
http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.
To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

end

Q25. I have never heard "Old Time Radio". Can I get an audio sample
via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect
to any of the WWW sites mentioned above, and follow the pointers to
their audio clips and / or soundbytes. Many of the soundbytes can be
downloaded, and played on your computer's sound card, others will
play "realtime" through your multimedia system. There is also a news
group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR
shows (news groups are notoriously inefficient at transferring large
binary files, however).

You can select from many moderate-length soundbytes at Jerry
Haendiges' Preview Listening Lounge at
www.otrsite.com/ra/preview.html

Q26. I have lots of loose OTR cassettes filling my drawers. Is there
a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about
everything from "underbed cardboard storage boxes" to old soft drink
cases. If you want your collection to have a more "professional"
look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from
specialty suppliers. Radio Shack used to carry a
small line of these and charged too much. We are in
the recording studio business, and receive catalogs
from several sources. The one I like best has
some of the lowest prices and unhesitatingly deals
with individuals and will take your credit card
number over the phone for instant shipment (in
contrast to some who require account setup, purchase
orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for
video. Cassette albums are available in a large
number of different styles, sizes and capacities.
The 8-cassette albums I use are CPCN.4+4M/WHT in
white and CPCN.4+4M/RBLU in royal blue. Outside
dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit
well on a bookshelf. This model also seems to cost
less per cassette than any of the other models,
though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

(Q27. deleted)

Q28. I am interested in re-creating some OTR drama. Where can I get scripts?

A28. Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com
---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the

equipment (and its condition) it was common for one
program to bleed into the opposite channel...especially
if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played
back) on a machine with mis-aligned tape heads. It can
also occur when trying to record over a 1/2 track
recording with a 1/4 track machine with dirty or
mis-aligned erase head. You usually will hear another
program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or
track at a time. As for crosstalk, make certain your
machines are kept in proper alignment. Use a high quality
BULK ERASER if you re-use old tapes... this is especially
true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws
once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet
every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the
StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please
get software and instructions from your favorite Internet Service
Provider or shareware/freeware software site, or connect to
www.old-time.com/irc.html for basic instructions.

(Q31. Deleted)

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since
many news servers ignore alt.groups, you may need to contact your ISP
to get that news group listed locally. See
www.old-time.com/newsgroups.html for more information. Also try
www.groups.google.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no
matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show
from the studio to transmitter sites. The show was done live at least
twice - once for the East coast, once for the West. After Bing Crosby
spearheaded the introduction of recorded shows (about 1948), the East
coast show was recorded for later telephone transmission to the West
coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy

them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.

Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)

It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:

1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/

2. Make note of the LOC Call Number and description of the item you need.

3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.

4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional

clearances may be required if the program is under a separate copyright.

5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.

Hint: point your browser to www.groups.google.com and try your search from there

---

Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

A43. Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.

MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a 64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good an audio rendition as possible.

NOTE: URLs mentioned in this FAQ may have changed. For the latest information, point your browser to www.old-time.com, or join one of the internet mailgroups mentioned above. Email addresses listed here may have changed as well.

On 25 Jan 2004 23:46:17 GMT, Bill Blomgren <billblomgren@hotmail.com>
wrote:

>Franken -may- be able to do better...but the chances of getting a good station
>line up are about zilch. It will be a nice money sink, just like the UAW
>attempt was.

On a purely non-ideological level, re: the new "liberal talk
venture"...

Their biggest problems will be signal-related. All the decent AM
signals in most markets are gone, and many of them are running the
right-leaning talk the new venture will be going up against.

If their Chicago affiliate is any indication...well, WNTD/950's signal
isn't exactly a Windy City powerhouse. It's 1000 watts day,
non-directional, and 5000 watts night, directional. Here's a look at
it, via the "for entertainment only" pattern at radio-locator.com:

Daytime:
http://www.radio-locator.com/cgi-bin/pat?call=WNTD&service=AM&status=L&hours=D

Looks good on a map, until you realize that A) basically anything
outside the inner "red" ring will give static, and B) ANY AM signal in
a major metro area like Chicago is subject to static, especially if
it's not a 50KW powerhouse.

The daytime pattern would appear, assuming the map is anywhere close
to reality, to give poor service to Chicago's northern and western
suburbs, especially.

Its only signal advantage over AM band newcomer WRLL/1690 Berwyn
("Real Oldies") would apparently be the lower dial position, and
perhaps a more central tower site.

Nighttime:
http://www.radio-locator.com/cgi-bin/pat?call=WNTD&service=AM&status=L&hours=N

Two site operation, here? It appears to have some of the same
problems as the day site, with a tighter east/west pattern.

It'll be interesting how they overcome such signal problems. There's
a rumor that they're looking at many of the Radio Unica stations (WNTD
was the network's Chicago affiliate).

In the San Francisco Bay Area, this would mean KIQI/1010, a 10KW
day/500w nighttimer that's probably one of Unica's better signals:

http://www.radio-locator.com/cgi-bin/pat?call=KIQI&service=AM&status=L&hours=D

But overall...the "signal advantage" in most of the markets already belongs to whichever station runs Rush or conservative talk in general. Chicago's Rush affiliate, WLS/890, blows 950 out of the signal water with its 50KW stick. San Francisco's KSFO/560 is not the strongest signal in the market, but had much higher visibility as a long-time market leader in its past days, and is run by current market leader KGO. 1010 would have to come out of nowhere.

In nearby Sacramento, Rush's "adopted hometown", the Unica station is KATD/990 Pittsburg (down in the Delta in the extreme East Bay). I used to listen to this station occasionally in its days as English-language AC/oldies "The Cat", and it does very well in Sacramento during the day, but disappears at night. And my old home station (also Rush's old home) KFBK blows 990 off the dial in terms of coverage, history and visibility.

Not only that...Sacramento's fastest growing suburbs are in the far northeast and eastern areas of the market...areas where 990's signal is not nearly as good. Someone oughta tell the Progress Media folks about market growth patterns outpacing once centrally-located AM stations.

Mike

Nobody gives a shit what you, a member of the public will accept, not any more than I, a member of the public will accept. This is an exercise in mental gymnastics accompanied by an argument that commonsense, though becoming less common, will prevail. Beat your chest and lead the least common denominators on to victory. What an accomplishment that will be.

There is overwhelming support in Congress for laws restricting indecency on the airwaves. That support is fueled by public pressure -- the same sort of public pressure that produced the "do not call" list and pretty well eviscerated the telemarketing industry.

>Tell that to HBO and the other cable providers who are taking viewers
>from broadcast TV because their content is more adult.

Cable's not the same thing as broadcast; it uses private spectrum that viewers have to pay to receive. You don't get HBO by default, and it doesn't show up on the TV screens of viewers who don't want it.

Because there are only so many megaHertz in the radio spectrum and so many advertising dollars in a local market, radio can't offer the vast array of choices that cable does. Moreover, radio is more intrusive than television; it's portable, it's ubiquitous, and you can hear a radio without looking at it or even being in the same room. Indecency on the radio is therefore a twofold evil: it invades ears that do not wish to hear it, and it takes up spectrum that could be used for higher quality programming.

The fact that someone in my market might get a 10 share with Howard Stern does not impress me.

No, not at all.. What I am suggesting is that very few liberals can face an
uncensored audience day after day like the successful conservatives can,
because their emotion-based politics falter under the light of logical
argument.

As a long time member of the broadcating industry I certainly care
what the public wants.

For someone so concerned about purity in the medium you're very free
with your own obscenities. Frankly, the place to start in cleaning up
the industry is with individuals cleaning up their acts. If you feel
free to use obscenities and other vulgar language how can I take you
seriously when you complain about hearing it on the radio?

Rich

Try a remedial arithmetic class. You're assuming there's only one station. The other 90% share is captured by others who possibly do the same thing. If you want to make that point you should use the rating. It includes the entire population, listening or not. Share is simply the percentage of the population using radio.

I still say the premium cable channels are doing pretty well with frontal nudity and people seem to be willing to pay for it. I doubt the web would be making much money if the porn sites didn't exist.

Let's rephrase your original statement. Let's say "some of the public doesn't want this material." That would be accurate. To say "the public", including everyone, doesn't want it can easily be disproved.

>I don't care what stations put on their Web sites, but the public owns
>the radio spectrum and it's right and proper that the public, through
>its elected representatives, should prescribe how it shall be used.

Since when does the public elect the FCC? "The Public" must let its representatives know what it wants, otherwise we'll be governed by the likes of John Ashcroft who is so erotically challeneged that he tries to cover up a great national symbol because it has a naked breast.

How many times have "preachers" tried to eliminate pornography (even soft core stuff like Playboy) and failed? While they're doing this they probably have a stash of Hustler in the nightstand or an underage child behind the altar.

I doubt it. The percentage of the population complaining about "dirty radio" is very small. What would happen if the letters to the FCC suddenly said "we want naked people on TV." Which politician would be first to introduce a bill to allow it?

People who like it or don't care (the majority, I believe) simply don't write.

Don't forget, it's also an election year. It's a much safer topic than asking why we're at war and where are those weapons of mass destruction. Why are Bush's buddies the only people sucking money from that $87 billion pool of cash.

Pontificating about the dangers of dirty words and naked bodies are wonderful ways to divert the public's attention from serious issues.

When young kids consider oral sex no more intimate than a good night kiss I want to see what "the public" 20 years from now will be complaining about.

Too many people out there forget that Limbaugh wasn't exactly a ratings machine for the first couple of years out in California and that most stations originally took him because he was free programming. Even then stations in major markets were tape delaying him into odd hours/weekends until the show took root. To expect that anyone will be able to short-circuit that process and jump straight into the spot light is asking to hit the lottery the first time they buy a ticket.

Further, there is no doubt that Franken is a bright, funny guy but as we all know too well radio is a different animal. He might be brilliant and he might crater. Your guess is as good as the next guys.

>--scott

Until someone complains...and that someone doesn't have to be a majority of people...a handful of complaints and the negative publicity that goes along with them, potentially reaching a much larger group of consumers than what Arbitron represents as listeners to a particular show or station, often does the trick and then advertisers disappear and Arbitron becomes irrelevant. How many affiliates has Stern picked up only to lose for exactly that reason, and he can't even get away with four letter words.

And you are claiming that Rush Limbaugh is not also playing to the emotions
in the same way?

Playing to the emotions with ludicrous arguments that aren't logical is what
talk radio is all about. Logical arguments don't bring in callers. Getting
people riled up and angry (either for, or against you) is what brings in
callers.

A couple of minutes with Google and the keywords Sony CD Recorder will
find the CDRW33 at a street price of about $500.

Kinda pricey for a one-shot deal when you can get software and
hardware for a PC for a lot less.....

How >many affiliates has Stern picked up only to lose for exactly that reason, and >he can't even get away with four letter words.

That's what makes Howard a pro. I'll bet, even if he could use them, he wouldn't. Howard Stern is a bad example to use because advertisers flock to his show. Not the Proctor & Gambles but the advertisers who want the audience he delivers. If I'm a car dealer who wants to sell a pickup to a 23 year old male I'd be smarter to use Stern than Limbaugh.

The "get to the advertiser" approach works in situations like Laura Schlessinger bashing the gay community. They fought back. According to the top honcho at Premiere it cost her show $30 million in lost billing. Her advertisers were the kind that sell soap and don't care who buys it. They don't want controversy and wouldn't be attracted to foul language in the first place.

It's an election year and the gummint has to look like it's doing something so their guy gets elected. Dirty words and bad taste is always an easy target because no legislator in his right mind is going to go on record advocating either one. They'll make laws. Someone will file suit and the Supreme Court will strike down the law and take the blame. It's standard operating procedure and leads to calls for more conservative judges who don't turn out to be as conservative as was hoped and we still can blame the judges.

It's a beautiful system that let's citizens believe they make a difference while being ignored.

Rich

Hmm I thought that was LIST for the w33. Not so bad when you actually read
the w33 features. If I needed a dedicated CD audio recorder today, it would
be the w33 or w66 Sony.

I consider an "uncensored audience" one where the calls aren't
screened. Are you telling me that conservative talk shows don't screen
their calls? Are you tellng me that hanging up on callers is facing an
audience? Usually you hang up on a caller because you don't know the
answer or you're doing schtick not because you're trying to make a
logical argument. Logical arguments don't get ratings in Talk Radio.

Unscreened talk shows are, generally, very boring because the same
callers get through repeatedly and really, really dull callers get on
and drone away. One after another.

Whether you like it or not it's the talent of the individual host
rather than their political slant. Many, many conservative hosts have
failed.

Rich

Well there certainly isn't anything rational about giving tax cuts to people
who don't pay taxes. Tax cuts are for taxpayers, to which the emotional
libs say are "for the rich". Who the hell do you think pays most of the
taxes? Listen to the left and hear their class warfare, race-baiting, etc.
Very logical.

This isn't an advert, honest. I'm looking for advice on how to put potential customers in touch with the agency responsible for the broadcast archives of the former USSR and Russian Federation.

I have a friend working in the agency and they are very proud of the materials, much of which has been digitised. In part they want to see the material aired and used, and in part they are looking for income to fund their archiving activities. It covers TV, radio, recorded concerts, still photography etc.

If anyone can point me at potentially interested bodies please reply here, or email me on phil [at] yarwell dot demon dot co dot uk

(The hotmail address above is primarily a spam trap)

Thanks,

Phil

Mike Ward <mward@iname.remove-this-part.com> had written:
|
| On a purely non-ideological level, re: the new "liberal talk
| venture"...
|
| Their biggest problems will be signal-related. All the decent AM
| signals in most markets are gone, and many of them are running the
| right-leaning talk the new venture will be going up against.
|
| If their Chicago affiliate is any indication...well, WNTD/950's signal
| isn't exactly a Windy City powerhouse. It's 1000 watts day,
| non-directional, and 5000 watts night, directional.

>From my experience, the 1 kW daytime was actually OK. The
transmitter was (still is?) relatively centrally located in
Chicago. The nighttime signal, though, was on a very tight pattern
from a site on the far South Side. It was very difficult to hear at
my North Side location (approx. 5600 North).

| Two site operation, here?

See above.

| In the San Francisco Bay Area, this would mean KIQI/1010, a 10KW
| day/500w nighttimer that's probably one of Unica's better signals:
|
| http://www.radio-locator.com/cgi-bin/pat?call=KIQI&service=AM&status=L&hours=D
|
| But overall...the "signal advantage" in most of the markets already
| belongs to whichever station runs Rush or conservative talk in
| general. Chicago's Rush affiliate, WLS/890, blows 950 out of the
| signal water with its 50KW stick. San Francisco's KSFO/560 is not the
| strongest signal in the market, but had much higher visibility as a
| long-time market leader in its past days, and is run by current market
| leader KGO. 1010 would have to come out of nowhere.

For a "coming out of nowhere comparison", KNEW is probably the more
valid choice than KSFO. It has nighttime signal problems in many Bay Area
locations as well. As for KSFO...well, as long as it can penetrate
Civil Defense-era bomb shelters in Daly City, it will probably do OK.

KIQI's transmitter is right at the east end of the Bay Bridge, so
it will put a good signal day and night into San Francisco,
Oakland, and Berkeley, and probably much of southern Marin County.
More problematical would be southern San Mateo County and all of Santa
Clara County -- but it's not the only station that would be facing

that problem. (In terms of geography, San Jose really ought to be
more of a separate market than it is -- the Dionne Warwick Syndrome
hits again.)

| Someone oughta tell the Progress Media folks
| about market growth patterns outpacing once centrally-located AM
| stations.

Many, many AM station owners have felt the sting of that
phenomenon.

| Yes, but NPR is fairly conservative these days. You want to hear liberals,
| you have to tune into Pacifica. And even they aren't HALF as radical as
| they were even a decade back.

The mother ship kind of comes and goes into radical mode these days. What keeps KPFA anchored is a core of reporters who, although they have definite viewpoints, are *very* informed about the topics they cover. But "radio" and "information" seem to be increasingly disjoint sets. "Infotainment" isn't just for teevee any more.

If you want to hear truly radical left-wing programming in the Bay Area, probably the best choices are Poor People's Radio (KPOO) at 89.5, or the North Oakland pirate at 104.1. The San Francisco pirate at 93.7 was raided; the East Oakland "Soul Beat" pirate at 104.1 kept going for a while after Comcast yanked the lease for its cable channel just before Thanksgiving. But that disappeared earlier this month and the old Soul Beat studio line has been disconnected.

According to my accountant the richest pay the least in taxes because
they can afford all the loopholes in the tax law. The middle class pay
the most as a percentage of their income. Some corporations pay no
taxes at all.

I take it you haven't listened to right wing radio recently. Class
warfare, race baiting, etc. have been their staples for at least a
decade now. Of course, if you're among the right wing this is gospel
truth and not race baiting at all.

The favored targets are often gays (Laura Schlessinger, Michael
Savage, Howie Carr, Sean Hannity, etc) have been particularly vicious.
Savage even threatened a lawsuit when gay groups threatened to go to
advertisers. It cost Schlessinger $30 million in billing. It's
particularly funny when they claim they didn't mean what they said
once they saw their income threatened.

I guess they didn't expect a targeted group would fight back.

It's hard to listen to the left because the right dominates radio.
Many of us would love the chance to hear both sides of bigotry.

I haven't really heard KPFA much. I listen a lot to WPFW for the great jazz programming, but in the last few years they have become really toned down. They used to ID as "Peace, Freedom and Wisdom" and they have long stopped doing that. Twenty years ago you could tune in late at night and hear long rants advocating "killing all the white people." Today they are mildly liberal and in favor of unionization.

That's something that both liberal and conservative politicians have been
doing recently. It's a bad idea, but it doesn't seem to be particular to
either side of the aisle.

Class warfare is a fact of life. Classic Republicans know this, and for
generations have voted for the party that helps them. In other words, they
vote their class interests. Only dumb Limburgers are poor
or lower middle class, and yet Republican.

Maybe someone in here can help me.I was wondering if anyone knows the whereabouts of a former radio station,disc jockey in Ft. Lauderdale,Florida,by the name of Kathy "Wild" West? She was on this FM station back in the early to mid 80's.I was just wondering if she was still djing,and if so where? And if she isn't waht she is doing for a living today? She was a very nice person.I used to call her up quite frequently,and she was really cool,and she would play alot of my requests too.

I miss hearing her voice coming in over the airwaves,when she would answer the phone and say,hello I-95.

A long time ago, this was about the use of obscenities on radio and TV, brought on by the current bills in Congress trying to make profanity illegal and Powell's comments that perhaps the FCC should be harder on obscenity cases.

Of course, it degenerated into a political battle--as often happens these days.

David, I think we are seeing the "glass" differently. I felt that the station had to base their income predictions on what ads they thought they could sell - if the needed income to show financial ability. You are saying that justification of such a balance sheet wasn't required. I'll agree that the FCC never questioned the figures in later years.

For anyone interested, here's a reminder of upcoming DX tests; if anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least March (2004)".

Sunday, February 15, 2004 - WQMA-1520, Marks, MS 12:00-2:00 am CST.
WWW: http://www.q1520radio.com/

Please remember, what's listed as being on, say, Monday *may* be what you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting
me know, and please, drop the station personnel a note, via e-mail or snail
mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

CLOSED CIRCUIT ADVISORY

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator. We haven=
't
asked for quite some time, but we need contributions TODAY. If you value =
this
service, please help.

We're here to serve you for as long as you want us. Your response over th=
e next
several weeks will provide that answer.

The address for the Amateur Radio Newsline is Post Office Box 660937, Arc=
adia
California, 91066.

Looking forward to hearing from you REALLY soon, I'm Andy Jarema, N6TCQ.

**

Amateur Radio Newsline report number 1380 with a release date of Friday,
January 23, 2004 to follow in 5-4-3-2-1. =20
=20
The following is a Q-S-T. The ARRL says that it will petition the FCC fo=
r a
code free entry level license with high frequency phone privileges and Am=
ateur
Radio Neewsline announces the Roy Neal, K6DUE, Amateur Radio Mentoring Pr=
oject.
These stories and more coming your way on Amateur Radio Newsline report =
number
1380 coming your way right now.

(Billboard Cart Here)=20
=20

HAM RADIO POLITICS: A NEW DIRECTION

Topping the news this week -- honoring one of our own. Enlisting an army=
of
volunteers to make us all a little bit better -- and doing it in the name=
of
the late Roy Neal, K6DUE. But first -- the biggest organization of Amate=
ur

Radio operators in the world finally takes a position on the code versus
no-code issue. The ARRL is asking the FCC in a petition for rulemaking t=
o
create a no code entry level H-F license for anyone who can successfully =
pass a
written exam of a mere 25 questions. If the FCC accepts the ARRL idea, i=
t
would keep the more stringent requirements for the Amateur Extra Class li=
cense,
including their ability to send and receive Morse code. Amateur Radio
Newsline=E2=80=99s David Black, KB4KCH, takes a look at the details of wh=
at the ARRL
is asking the FCC to do:

--
Code free access to ham radio's high frequency bands ... it's part of wha=
t
could change amateur radio's complexion forever. And it could become rea=
lity.=20
The ARRL says it will ask the FCC to make sweeping changes to the United =
States
amateur radio service. Perhaps the biggest change of all: Creating a new=
entry
level ham radio license that grants access to high frequencies without
requiring any Morse code proficiency. =20

But that's not all. The League also proposes consolidating all amateur r=
adio
licenses into three classes: Novice, as it's being called for now, Genera=
l and
the highest level, Extra. And only the Extra class license would require=
Morse
code proficiency--of 5 words per minute. The new Novice license would re=
quire
a 25-question written test and would offer limited HF, Morse code, data a=
nd
phone and image privileges on 80, 40, 15 and 10 meters. Novices would al=
so
have VHF and UHF privileges, including access to 6 meters and 2 meters. =
Their
power levels would be restricted to 100 watts on 80, 40 and 15 meters, an=
d to
50 watts on 10 meters and higher.

The middle amateur radio license would continue to be the General, but it=
would
include all current Technician, Tech Plus and present General license hol=
ders.=20
This license would not require a Morse code test. Under this proposal, i=
f you
are a current Technician or Technician Plus, you would automatically obta=

in
General class privileges with no additional testing. The current General
examination would remain unchanged for new applicants.

The third license class, the Extra, would involve the fewest changes. Un=
der
the League proposal, hams with Advanced class licenses would essentially
automatically become Extra class because of similarities in the technical
proficiency required for both levels. New applicants for the Extra class
license would have to pass a 5 word-per-minute code test--the written tes=
t
would stay as is. If you're currently a Novice, Tech Plus or General lic=
ense
holder, you would receive a lifetime 5 word-per-minute credit.

The proposed changes got the blessing of ARRL's Board of Directors Januar=
y
16th. The proposals are the creation of a League Executive Committee act=
ing at
the Board's direction. The new structure suggestions come as a result to
changes in international radio regulations that are part of the World
Radiocommunication Conference 2003. At the same time, the FCC has been w=
anting
to streamline the amateur radio licensing structure which it began more t=
han
five years ago.

How do radio amateurs feel about the changes? Reaction is mixed:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of
newscast.
--

Janice Rock, AF4LT, sees benefits and drawbacks:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of
newscast.
--

Supporters say the new structure offers a true entry level license with H=
F
privileges that should boost growth in the amateur radio service. While =
some
hams may claim that taking away code for HF access damages amateur radio,=
other
hams dispute that. Bill Levey, WA4FAT:

--
Bill Levey, WA4FAT - Audio Only Report: Please listen to audio version o=
f
newscast.

--

Supporters say the changes will help amateur radio by allowing new Novice=
s to
participate in emergency nets on HF sideband. The impact of this propos=
al on
amateur radio's long term future has Janice Rock concerned for another re=
ason:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of
newscast.
--

League Executive Vice President David Sumner K1ZZ says the Novice class l=
icense
could wind up getting a new name, more appropriate for the times -- this,=
as
amateur radio faces what could be one of the biggest changes in its histo=
ry.

>From Birmingham, Alabama, I=E2=80=99m David Black, KB4KCH for the Amateur=
Radio
Newsline.

RESCUE RADIO: NYC ARES ACTIVATES FOR COLD WEATHER

The New York City District Amateur Radio Emergency Service was called int=
o
action last Wednesday evening, January 14 th. This, after the American R=
ed
Cross of Greater New York contacted Mike Lisenco N2YBB. Lisenco is the
District Emergency Coordinator for ARES and the message was clear: Call
together the members of ARES to provide emergency communications between =
the
warming centers being established in the five boroughs and Red Cross
headquarters in Manhattan. =20

--

Lisenco: =E2=80=9COnce I received the phone call from the coordinator of=
disaster
volunteers at the Red Cross of greater New York, the first thing that I d=
id was
to call the five EC=E2=80=99s we have here in New York City. Each boroug=
h which

constitutes a county has its own EC. In turn they called their people lo=
oking
staff the shelters.=E2=80=9D

--

By the next morning, New York City District ARES Emergency Coordinators h=
ad
more than a dozen Amateur Radio operators on standby awaiting the activat=
ion.=20
Friday evening they went into action after Mayor Bloomberg announced the
shelter openings. The ARES radio operators manned their posts throughout=
the
operation, which lasted the better part of a day during some of the most =
frigid
weather ever recorded in the Big Apple. The hams finally stood down on
Saturday afternoon. =20

This is not the first time that New York City District ARES has provided
critical communications for emergencies. They were active with the oil b=
arge
explosion at Port Mobile on Staten Island, the Northeast Blackout in Augu=
st
2003 and did heroic work following the terrorist attacks of September 11,=
2001.
(ARNewsline(tm), NYC ARES)

**

Break 1

Stay tuned for the details on one of amateur radios most ambitious mentor=
ing
projects. It=E2=80=99s coming up later in the newscast, but first From th=
e United
States of America, we are the Amateur Radio Newsline, heard on bulletin
stations around the world including the Peace River Repeater Associations
systems serving Punta Gorda Florida.

(5 sec pause here)

**

ANNOUNCING THE ROY NEAL, K6DUE, AMATEUR RADIO MENTORING PROJECT

Amateur Radio Newsline is paying tribute its late vice president, Roy Nea=
l,
K6DUE, by naming an ongoing mentoring program in his honor. Roy became a
silent key last August after surgery. He was 82.

The Roy Neal, K6DUE, Amateur Radio Mentoring Project is designed to pair =
new
hams -- often called =E2=80=9Cnewbies=E2=80=9D -- with veteran amateurs. =
This, in the hope

that some of the established hams=E2=80=99 operator skills can be passed =
down to new
generations. =20

--

Pasternak: =E2=80=9Cere is a long tradition of mentoring, often called
=E2=80=9Celmering,=E2=80=9D in Amateur Radio. No one knows the origin of=
the term, but the
first teacher might well have been named =E2=80=9CElmer.=E2=80=9D My men=
tor was a guy
named Charlie Zussman. Back in the 1950=E2=80=99s he was WA2AKX. Today =
he=E2=80=99s WE2R.
And his helping me become a ham has lead to a friendship that has lasted=
a
lifetime. What he taught me was that tradition is an important part of t=
he
hobby.

--

That=E2=80=99s Bill Pasternak, WA6ITF, who has produced these newscasts s=
ince 1977.=20
He and the Newsline Board of Directors came up with the idea for this pro=
ject.=20
Bill says that ham radio has become a tremendously complex arena and new =
hams
often don=E2=80=99t know where to turn for help:

--

Pasternak: =E2=80=9CWe have licensed hams who are truly experts in numero=
us fields
ranging from bouncing radio signals off the moon, to writing complicated
software which enables new forms of two-way communication. We want to ta=
ke
advantage of that knowledge base to help newcommers.=E2=80=9D

--
=09
While Amateur Radio includes world-class experts in a number of specialti=
es,
there are literally thousands of hams who have operating skills also wort=
hy of
passing on. For example, contesting is very popular, yet it is a tough n=
ut to
crack for a beginner. =20

--

Pasternak: =E2=80=9CContesting is intimidating. I know. I=E2=80=99m ju=
st getting
started. Good contest operators often are able to contact four stations =

per
minute for hours at a time. The great ones do even better than that. Ho=
w they
are able to do that is a skill that should be passed on to newcommers.=E2=
=80=9D

--

Two large pools of Amateurs are needed to make this mentoring project wor=
k.=20
First, there must be a group of volunteers who have a skill and are willi=
ng to
share their time. The second group is made up of the large number of beg=
inners
who want to learn.

One of the nations top mentors, kit building expert Joe Eisenberg, K0NEB,=
has
agreed to help set up databases and to begin the process of matching ment=
ors
with beginners. All we need to know is if you need assistance or if you =
are
able to mentor others. We also need your name, call letters, address wit=
h
zipcode, phone number, e-mail and when its best call.
=09
The special e-mail address to register is mentor@arnewsline.org.

Mentors might be matched by zipcode =E2=80=93 and be in the same town, or=
they might
be half-way around the world from each other and communicate by e-mail. =
Either
way I think we can make it work.

--

Pasternak: =E2=80=9CThe project=E2=80=99s namesake, Roy Neal, K6DUE, was=
himself a mentor
and not only in ham radio. I know this first hand because he is the one =
who
taught me to become a better writer and producer.=20

More important: Those of us who knew Roy, also know that helping others =
was a
very important part of his life. As such. we feel that the least that we=
here
at Amateur Radio Newsline can do is keep his memory alive with this proje=
ct.=E2=80=9D

--

Again, that e-mail address to register for the Roy Neal, K6DUE, Amateur R=
adio

Mentoring Project is mentor@arnewsline.org More information is on our we=
bsite
at www.arnewsline.org

And Roy, old buddy, this one is for you! (ARNewsline(tm), W6RCL)

**

THE BPL FIGHT: NORTH CAROLINA HAMS MEET WITH POWER PROVIDERS

Slow but steady progress in dealing with the imminent release of Broadban=
d over
Poweerlines in North Carolina. Gary Pearce, KN4AQ, is here with more:

--

Progress Energy fulfilled their promise to North Carolina Amateur Radio
operators and invited several Raleigh area hams to observe their new Phas=
e II
BPL trial in a rural subdivision south of the city on January 15th. =20

BPL =E2=80=93 Broadband over Power Lines =E2=80=93 is a system for delive=
ring high speed
Internet through neighborhoods and into homes and businesses via the powe=
r
lines. The technology places radio frequency signals on the power lines =
in
parts of the spectrum between 2 and 80 MHz. Those signals radiate to som=
e
extent, and can cause interference to a receiver in the vicinity of the p=
ower
lines. Naturally this has become cause for great concern among hams worl=
dwide.

In Raleigh, three ham radio operators met with engineers for both Progres=
s
Energy and Amperion, the equipment manufacturer. Two of the Progress Ene=
rgy
engineers were also hams. =20

The BPL trial consisted of a half-mile of overhead feeder along a highway=
, and
a few dozen homes passed by buried power lines. A =E2=80=9Crepeater=E2=80=
=9D amplified
the signal about every other block. =20

We were particularly interested in the spectrum used. We learned that ea=
ch run
of BPL, from repeater to repeater, uses two blocks of spectrum, 2.5 and 3=
.5 MHz
wide. At each repeater, a different block of spectrum is required. =20

The overhead feeder segment in this trial used spectrum blocks around 25 =
and 29

MHz. We listened with mobile equipment driving on the road adjacent to t=
he
power line, and received S-9 signals in the immediate vicinity of the lin=
e that
sounded like this when tuning across the 10 meter band:

--
[audio clip of BPL signal]
--

The signal fell off quickly when driving away from the line, but a ham at=
a
home station almost a mile away heard the 10-meter BPL signal about S-6 u=
sing
an 80-meter dipole antenna. =20

Amperion says a Network Operation Center can move any repeater to another=
block
of spectrum, or notch part of a block by remote control, to eliminate
interference, but they were unable to demonstrate that for our test. =20

Even with that flexibility, fitting 3.5 MHz wide blocks of energy in betw=
een
ham bands would be a delicate jigsaw puzzle. That much =E2=80=9Cempty=E2=
=80=9D spectrum
exists only between the 30, 20 and 17-meter bands, and it=E2=80=99s empty=
only from
the perspective of Amateur Radio.

Skip could completely upset the equation. BPL signals, which are similar=
to
very low power QRP Amateur signals, could reflect off the ionosphere and =
appear
hundreds or thousands of miles away. The energy of one isolated trial ar=
ea
might not have much impact, but a mature nationwide system with hundreds =
or
even thousands of installations using the same spectrum blocks could be a=
very
different story.

Yet to come in BPL is a comprehensive report from the NTIA; an FCC Notice=
of
Proposed Rulemaking for changes in Part 15, based on last year=E2=80=99s =
Notice of
Inquiry; and a decision by your local utility about getting involved in B=
PL.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carol=
ina

--

The hams at the test included Wake County ARES E-C Tom Brown, N4TAB, Tech=
nical
Specialist Frank Lynch, W4FAL, and reporter Gary Pearce, KN4AQ.=20

**

THAT FINAL ITEM: THE LIFE AND TIMES OF K2ORS

And finally this week, a new book is in the works about a broadcast legen=
d who
also happened to be a ham radio operator. Take a listen:

--
Shep: =E2=80=9CWell there I am playing that character deep in the jungle=
. We have
$400,000 of camera equipment that=E2=80=99s being eaten by mosquitoes. T=
hey eat
Betamax cameras. You don=E2=80=99t know about the tropics. Leaches are =
coming up
the tripods, when a runner comes down the beach. He=E2=80=99s a Chumaro =
Indian. =20

He=E2=80=99s running. He=E2=80=99s sweating. He arrives in the clearing=
. This is exactly
what happened. =20

The Director is standing there. He=E2=80=99s sweating and saying: =E2=80=98=
...damn, we got
to get this.=E2=80=99 We kept trying to clean the lens off. It was a to=
ugh shoot.

And this Chumaro runner comes up and he=E2=80=99s saying; =E2=80=98Messag=
e. Message.=E2=80=9D=20
He has a message. The Director looks at it and he hands it to me and the
message said -- and I quote: =E2=80=98...The Dayton Hamvention called. T=
hey want you
to speak this spring.=E2=80=99

I said: =E2=80=98For cripes sake, how did they know I was in the jungle=E2=
=80=99=20
(laughter)=E2=80=9D

--

That was the late Gene Shepherd, K2ORS, speaking at the Dayton Hamvention several years ago. Shep as he liked to be called, passed away in 1999. =
Now,
author Eugene Bergmann has set to work writing the definitive book about =
the
ham who invented talk radio. In a recent interview with Amateur Radio Newsline, he told us why:

--

Bergmann: =E2=80=9CWell I first started listening to Jean Shepherd way b=
ack in =E2=80=9856
when I was in college and I think what he had to say and the way he said =
it
affected my thinking for the rest of my life. Soon after he died I reali=
zed
how important he was to my way of thinking. That he was like an old frie=
nd. I
got more and more involved in learning more about him and I finally decid=
ed
that I had to write a book about his art.=E2=80=9D

--

In writing his book, Eugene Bergmann wants to make certain that every asp=
ect of
Shep=E2=80=99s life and career is accounted for, including his love of ha=
m radio.=20
And a love it was as in this very rare recording where he accurately pred=
icted
the explosive growth in F-M and repeaters in general and one New York Cit=
y
machine in particular:

--

Shep: =E2=80=9CI don=E2=80=99t think you guys who sit around every night =
like you do
recognize the already legandary status of this repeater outside of this a=
rea.=20
I just came back from a trip from the Canadian border and all the way dow=
n
through New England and way up in the Northern part of Maine I worked guy=
s and
the one thing that they all talked about was SUR (WA2SUR). And they real=
ly was
a quality of =E2=80=98wow=E2=80=99 in their voice. I think that in anoth=
er ten years
there=E2=80=99s no telling how immense this repeater will be and what a s=
tructure it
will be. I am very serious when I say this. I think we are in the begi=
nning
of a thing here and I think that ultimately 25 years from now people will=

look
back on the early two meter guys like us -- we=E2=80=99re considered earl=
y guys now
-- with a legendary awe. You know, with a quality of awe, like =E2=80=98=
my god --=20
they started it all.=E2=80=9D

--

That was recorded way back the evening of June 21st 1972 over the then W=
A2SUR
repeater in New York City. K2ORS was right on in his F-M and repeater g=
rowth
forecast. Bergmann says that=E2=80=99s the kind of he plans to include:

--

Bergmann: =E2=80=9CIn May of 1968 in one of his broadcasts he said: =E2=80=
=98...I became at
the age of ten, totally, maniacally and for life I might point out --
completely skulled out by Amateur Radio.=E2=80=99 So he was quite an ent=
husiast up
to his death in =E2=80=9899=E2=80=9D

-- =20

Sound intriguing? Well you can find out a lot more about Eugnene Bergann=
=E2=80=99s
book and how you can help to writer it on this weeks RAIN Report. Just g=
o to
www.rainreport.com or dial into area code 847-827-7246, sit back and enjo=
y a
quarter hour with Eugene Bergmann and his new book on the legendary Jean
Shepherd, K2ORS. (ARNewsline(tm))

But soon, thanks to AM IBOC and BPL, nobody will be able to make out the words on AM broadcasts well enough to know if there are obscenities being used or not. Thus, the FCC will have solved the problem.

AMATEUR RADIO NEWSLINE=E2=84=A2 ANNOUNCES CREATION OF THE ROY NEAL, K6DUE=
, AMATEUR
RADIO MENTORING PROJECT

January 15, 2004 (Los Angeles California) The Amateur Radio Newsline Inc=
., a
Federally chartered 501(c)(3) not-for-profit corporation has today announ=
ced
the creation of the =E2=80=9CRoy Neal, K6DUE, Amateur Radio Mentoring Pro=
ject.=E2=80=9D=20
This is a program designed to take newly licensed radio amateurs and plac=
e them
one-on-one with veteran hams so that they may learn the traditions and
operating skills that no classroom or home-study environment can teach.=20

Roy Neal, K6DUE, was a driving force within the structure of Amateur Radi=
o
Newsline. He passed away on Friday, August 15, 2003 from complications a=
rising
from heart valve replacement surgery a few days earlier.

In addition to serving as Amateur Radio Newsline's Vice President, he was=
also
our teacher, advisor and friend. Those of us who had the honor of knowin=
g Roy
were keenly aware of his willingness to help anyone better themselves. H=
e was
always willing to share his lifetime of knowledge in many areas including
science, space exploration and Amateur Radio. With this in mind the Amat=
eur
Radio Newsline Board of Directors at its annual meeting on December 13, 2=
003

voted unanimously to honor Roy=E2=80=99s memory by creating a program to =
carry on his
vision. =20

What we have named =E2=80=9CThe Roy Neal, K6DUE, Amateur Radio Mentoring =
Project=E2=80=9D
is loosely based on a similar program created by Broadway performer Ann
Reinking. Reinking was a student of and performer with the legendary
choreographer/director Bob Fosse. She is now carrying on the =E2=80=9Cme=
ntoring=E2=80=9D
tradition in the art of dance through her own educational foundation, th=
e
Broadway Theater Project. This is a Florida based training program connec=
ting
students with seasoned theater professionals. If we may quote Ms. Reinki=
ng:

=E2=80=9CIts sort of an un-written law or rule in the world of dance that=
you pass on
what you know. This particular craft is at its best when its passed from=
one
person's hands to the next.=E2=80=9D

Now, if you think about it, what Ann Reinking says about "dance" applies
equally to our world of Amateur Radio. Maybe more so, because, for decad=
es the
knowledge and tradition of our hobby/service was passed down from seasone=
d
operators to newcomers, one to one. Unfortunately, in the ham radio of t=
oday,
this art of mentoring that we call "Elmering" seems to be disappearing. =
It is
being replaced by "weekend cram class training" and/or the more tedious w=
orld
of =E2=80=9Chome study.=E2=80=9D Both provide lots of technologically tr=
ained hams, but
they do not turn out skilled operators or hams who really appreciate the =
art of
amateur radio. Only one-on-one =E2=80=9Cmentoring=E2=80=9D or =E2=80=9CEl=
mering=E2=80=9D can do that.

=E2=80=9CThe Roy Neal, K6DUE, Amateur Radio Mentoring Project=E2=80=9D is=
to be a similarly
structured program that fosters those one-on-one relationships that go we=
ll
beyond the knowledge necessary to pass a ham radio exam. It will put an
emphasis on our traditional ham radio values by placing new hams into con=
tact
with skilled operators who are willing to teach them such radio art-forms=
as
how to work DX, or run a contest, build and operate a repeater, talk by

bouncing signals off the moon, kit construction and anything else that ma=
kes a
ham a ham. In essence, to pass along the living traditions that make ham =
radio
what it is to all of us old timers.

To make this work, two groups of hams are needed. First we need skilled
operators who are willing to donate time to assist those in need of train=
ing.=20
We also need new hams to come forward and say: =E2=80=9CI want to learn m=
ore.=E2=80=9D We
will do our part by matching the mentors to those in need of Elmering. =20

To get the project underway we have asked Joe Eisenberg, K0NEB, to create=
the
necessary databases and begin the process of matching volunteer mentors t=
o
those wishing instruction. We are also asking both groups to send us an =
e-mail
at mentor@arnewsline.org. In your note please state if you are offering =
to be
a mentor or are in need of training. Please include your name, call, add=
ress,
e-mail address with zipcode, phone number, best time of day to call and a=
ny
other pertinent information. =20

It is our hope that the nation's Amateur Radio community will join with u=
s to
make "The Roy Neal, K6DUE, Amateur Radio Mentoring Project" a part of the
traditions of the hobby, and that it will become a lasting memorial to th=
e
radio amateur who gave so much of his life to making Amateur Radio the be=
st
hobby and service in the universe.=20
. =20

333. Record Real Media Stream

Newsgroup: rec.radio.broadcasting
Date: 2004-01-30 22:28:40 UTC
From: rmdiv2001@hotmail.com
Message-ID: <bvelqo$pi1$1@xuxa.iecc.com>
Source record: 6073
Cross-posted to: alt.internet.radio,rec.audio.pro,rec.radio.broadcasting

I am trying to record some Real Media Streams from the KQED archive so that I can listen to it in my car when driving home. Here is a link to one such stream:

http://www.kqed.org/.stream/real/radio/forum/2004/01/2004-01-29a-forum.rm.ram

When put this link into my webbrowser it loads up the Real Media Player and streams the show. Now I tried to capture this show with NetTransport by setting the URL to that address. Unfortunately, it downloads not the right thing but only some file with the size of 210 bytes.

How can I capture this stream? What other free software is out there that can record Real Media Streams?

Thanks a lot,

Rob

334. Amateur Radio Newsline(tm) Report 1381 – January 30, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-01-30 22:28:41 UTC

Amateur Radio Newsline(tm) Report 1381 – January 30, 2004

Amateur Radio Newsline report number 1381 with a release date of Friday, January 30, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hams across the nation react to the ARRL restructuring proposal and the first B-P-L law suit involving ham radio is threatened in Austria. These stories and an interview with ARRL President Jim Haynie, W5JBP, highlight this weeks Amateur Radio Newsline report number 1381 coming your way right now!

(Billboard Cart Here)

**

RESTRUCTURING: HAMS REACT TO THE ARRL NO-CODE PROPOSAL

Hams are starting to react to the recent ARRL proposal to restructure the United States Amateur Radio service, and not surprising the comments are as diverse as the community itself. Amateur Radio Newsline’s David Black, KB4KCH, is at our South-East Bureau with this part of the story:

--

If you listen to the ham bands and check out the comments on the qrz.com website, it appears that most amateur radio operators have a somewhat sedate response to the ARRL's restructuring proposal. While some activists make their opposition quite vocal, the majority of comments so far seem to accept the League's initiative, 'though some do express reservations.

"I can live with this" is how some comments go. Others more strongly support the League by saying, "right on, A-double-R-L." The biggest concern most express centers around the ability to monitor the airwaves for rules compliance if explosive growth results. As one operator on 15 meters says, "If we get a million new hams, will the FCC give us 500 more Riley Hollingsworth's to keep them in line?" Hollingsworth handles amateur radio enforcement matters for the Commission.

Some operators say the League's proposal will wind up dumbing down amateur radio. Some even claim to have resigned their ARRL membership, 'though so far, no proof of that has surfaced. Vehement opponents of restructuring may in fact terminate their League memberships, but the number is not expected to be significant.

Restructuring is not a done deal. Announcement of the League's proposal is only the start. The League will formally request that the FCC make a rules change. Once the Commission receives that request, it will be up to the FCC to decide

whether or not it will consider the League proposal put it out for public comment. Chances are that it will. Once the proposal is assigned a rule making designation, you will have a chance to make your opinion known.

Comments are likely to come from the general public, the business community and any special interest groups as well as those who hold an FCC assigned call sign.

Stay tuned -- the story's just beginning.

>From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Unless the FCC decides to place the ARRL request on a separate fast-track, you can expect the agency’s first action to be putting it out for initial comment sometime in the next several weeks. (ARNewsline(tm))

**

RESTRUCTURING: THE ARRL ON THE ARRL RESTRUCTURING PROPOSAL

The ARRL is now explaining why it has decided to ask the FCC to restructure the United States Amateur Radio Service, and the words are coming straight from the top. Amateur Radio Newsline’s Mark Abramowicz, NT3V, caught up with ARRL President Jim Haynie, W5JBP, by phone and got some insight into why the ARRL Board acted as it did :

--
With the American Radio Relay League's imminent filing with the FCC of its proposal for a new, no-code HF entry level license, the debate is certain to heat up.

ARRL President Jim Haynie W5JBP acknowledges the league's proposal will generate some controversy. But he says months of research, surveys and lots of internal debate went into crafting the revival of a Novice-class license.

Yes, Haynie confides, the ARRL's directors and Haynie himself were pressing the flesh - so to speak - for months gathering input from the amateur community. Directors also were conducting informal surveys among ARRL members. And, he says, a professional research company was hired by the league to survey hams about the state of the hobby.

Haynie says the research company's findings were pretty sobering and bolstered the ARRL board's drive for license reform.

"For example, 53 percent, if my memory serves me correct, today of all amateurs now are 55 years or older," Haynie says. "And this is growing at an exponential rate, it's not linear. And this is a very disturbing thought."

He says the results also revealed something the ARRL suspected for some time.

"There's people getting licenses and they're getting involved in what we call, or what I call '2-meter ghettos' and they have no place else to go so they lose

interest after about a year or six months or whatever," Haynie explains. "So you've got 200,000 or 300,000 Technician licenses out there who say 'I've tried' and they did and they didn't like it."

Haynie says it became clear one way to recapture the magic of the hobby lay in the experiences many long-time hams had when they first entered amateur radio.

"We went back and thought about, okay, how did it used to work and what was successful about it? And the old Novice class license was extremely successful, I think. And, we said, 'Well, okay then we have to go back to some form of that.' "

Last year's World Radiocommuncations Conference laid the ground work for countries to decide for themselves what to do about CW and licensing. But Haynie says the WRC '03 decision played a small role in the ARRL's deliberations.

"Morse Code is certainly tradition, I don't deny that," Haynie says. "And I think it's a neat ability. It's a skill. It has nothing to do with intelligence."

Haynie says he and other directors have heard some argue: 'Hey, I had to pass a code test, why shouldn't everyone else.' Haynie says that's like saying I'd like to play golf like Tiger Woods and coming to the realization that's probably not going to happen because you simply don't possess the skills - even with lots of practice. The same logic, he says, applies to CW. For many hams, he says, it's simply not their bag.

Haynie says the ARRL's proposal preserves CW for one license class, yet opens the doors to the world of HF for those who couldn't learn and master Morse Code to pass even a 5-words-per-minute test.

"People, they realize, they've come to grips: We are getting older. And we're not getting the people into Amateur Radio," Haynie says.

"And the amateur community realizes that we've gotta do something. And, I don't say that the league's proposal is perfect. Neither does any of the directors or officers of the league say that. But it was the best that we could come up with that still preserved the Morse Code tradition for the Extra class exam, and yet, gave you the taste of the old Novice that I used to have 30-something years ago."

Haynie says he's confident, based on his experience with the FCC, that the agency will look favorably on the ARRL license proposal.

"I have a gut feeling that they will take a majority of it, at least I think they will. They'll probably fine tune it, they'll tweak it some because that's typical of the federal government," Haynie says.

"But on the other hand, I know, I know that they want to simplify the Amateur Radio Service. They want three classes of licenses. They want to reduce their workload and continue to do what they like to do and amateur radio take care of itself."

And how long does Haynie think it will take the FCC to act and make any changes to the Amateur Radio license structure? He says don't expect a decision anytime soon.

"I don't see anything happening on any of the petitions, including the league's, probably 'til late 2005," Haynie concludes.

Haynie says his e-mail and phone have been busy since the board's vote two weeks ago. He says he's comfortable with the license proposal and is prepared to support and defend it.

Haynie says he had the chance to do so earlier this week before his hometown radio club in Garland, Texas. He says after explaining the league's rationale to the group, those willing to listen asked lots of questions. Haynie says he felt by the time it was over, many appreciated the league's work on behalf of the hobby.

Haynie's next stop: The 44th Tropical Hamboree in Miami on February 7 where he's expecting to get lots of feedback.

For the Amateur Radio Newsline, I'm Mark Abramowicz NT3V in Philadelphia.

--

If all went as expected, the ARRL was to transmit its proposal to the FCC on Wednesday, January 28th. And less we forget, a word of congratulations to Jim Haynie on his election to a third term leading the United States only recognized Amateur Radio society. The ARRL Letter Board of Directors expressed its confidence in W5JBP’s leadership on January 16 with a unanimous vote for his him to continue as President. (ARNewsline(tm))

THE BPL FIGHT: AUSTRIAN BPL PROVIDER SUING HAMS OVER NEWS STORY

In what looks to be a case of “he said -- no -- he said,” a row is brewing over the introduction of Broadband over Powerline telecommunications in the city of Linz, Austria. One that has a service provider taking that nations Amateur Radio society to court over statements quoted in the media world-wide.

As reported a few weeks ago, stories were circulating that PLT, or Power Line Telecommunications as the Europeans call their BPL system, had been halted in Linz. This, due to interference caused by the system. Also that the Austrian government had enjoined the service provider and the system would never be permitted.

Not true says the BPL provider and the power company and its now headed to court to try to stop the hams from complaining to them and to the press. From across the Atlantic, Jeramy Boot, G4NJH, has more:

--

The Austrian national amateur radio society, OeVSV, has objected to the use of PLT in Linz, stating that it causes interference to amateur stations, and issuing a press release which was picked up by the Austrian mass media. It appears that the OeVSV was misquoted as saying that the Austrian ministry had taken out an injunction against the PLT providers and that the service had been closed down for good in Linz.

The management of Speed-Web Consulting and Linz AG, who are responsible for the PLT transmissions, are disclaiming what they say are "press attacks by Austrian radio amateurs". They say that there has not been any injunction against them and the roll-out of PLT continues.

Speed-Web and Linz AG say that Austrian radio amateurs are doing their best to stop PLT "by filing undue interference complaints". They go on to say that "if there should be any actual, harmful and officially proven interference case caused by Powerline Communications, mitigation measures will solve this very case at that specific location in the concerned frequency".

On the 14th of January, Linz AG stated that it would be suing the OeVSV, as well as its president personally, over this matter.

Jeramy Boot, G4NJH.

--

The decision of Linz A G to sue the ham radio operators over the story of BPL says that in this one, big business is willing to go the whole nine yards. (GB2RS)

**

THE BPL FIGHT: FCC'S ABERNATHY ACKNOWLEDGES AMATEUR RADIO BPL CONCERNS

Here at home, FCC Commissioner Kathleen Q. Abernathy is apparently shifting away from her definition of BPL as a "Broadband Nirvana.” Last week Abernathy specifically cited Amateur Radio concerns about the interference potential of Broadband Over Power Line in remarks she delivered to the Catholic University of America's Columbus School of Law.

According to the ARRL Letter, Abernathy said BPL should not be widely deployed before dealing with ham radio's interference fears. She admitted that she now recognizes that Amateur Radio licensees have raised concerns about the potential for harmful interference. Abernathy described this as something that will have to be addressed before any mass market deployment can occur.

Commissioner Abernathy made her remarks on January 22 at the school's Washington, DC campus. Abernathy said that if engineers can find a way to prevent harmful interference to other radio services, BPL would represent a tremendous advance for consumers, because it could bring broadband to any home

that has electric power delivery. (ARRL)

**

RADIO LAW: CONGRESS MAY RAISE INDECENCY AND OBSCENITY FINES

Using obscene and indecent language on the airwaves may soon get very expensive. This as congress considers raising the stakes for those who insist on talking dirty on the radio. Amateur Radio Newsline’s Bill Pasternak, WA6ITF, has the details:

--
United States Representative Fred Upton of Michigan introduced congressional legislation to upthe maximum fine for an indecent broadcast from $27,500 to $275,000. Under the Upton sponsored measure the maximum fine for a continuing violation would be raised from $300,000 to $3 million.

Upton had also scheduled hearings to review the FCC's indecency enforcement policies for January 28th. Ken Johnson, a spokesman for Representative Billy Tauzin of Louisiana is quoted as saying that law makers intend to move the legislation quickly in hopes of sending a signal to broadcasters that enough is enough.

This action comes following recent complaints by FCC Chairman Michael Powell. He says that the existing penalty cap on indecency fines was too low to discourage off-color broadcasts.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF

--

Commissioner Powell believes that once broadcasters start to feel the pinch where in their wallets they will start to think twice about transmitting indecency on the airwaves. (Published news reports)

**

ENFORCEMENT: UPS TO THE FCC: YOU HAVE OUR FULL COOPERATION

The FCC has received a letter from United Parcel Service offering the company’s full cooperation in removing any unlicensed radio equipment from its nationwide fleet. This follows a January 7th letter to the Middlesburg Ohio office of U-P-S detailing unlicensed 10 meter operations coming from delivery vehicles in that area.

The FCC also has contacted another trucking company, R and L Transfer of Norwalk Ohio regarding the same type of problem. Unlicensed operators coming to the 10 meter band has been a growing problem around the world in recent years. (FCC)

**

ENFORCEMENT: THAT RADAR IS A NO-NO

The FCC has also written to a pair of hams in the Winfield and Haysville Kansas area. This, regarding a reported piece of marine radar equipment mounted in a land based vehicle. According to the FCC the radar unit was being used for storm spotting without being licensed for this use. The identities of those using the radar system were not revealed. (FCC)

**

HAMFESTS AND CONVENTIONS: OKLAHOMA IN MARCH

Turning to the social scene, the Green Country Hamfest and ARRL Oklahoma Section Convention is slated for Friday and Saturday, March 19th and 20th at the Claremore Exposition Center in Claremore Oklahome. Claremore is not far from Tulsa, and the event will feature free parking, loads of vendors, on-site ham radio exams, numerous forum sessions along with some truly nifty prizes. More information is on the web at www.greencountryhamfest.com (KC5FM)

**

HAMFESTS AND CONVENTIONS: FIRE CANT STOP THE DIXIFEST IN MEMPHIS

Despite a fire that destroyed its normal venue, Dixiefest 2004 in Memphis Tennessee will happen the weekend of February 14 and 15. Planners were able to find a new home at the Mid-South Fairgrounds' Pipkin Building. This is only a proverbial stones-throw from the Shelby County Building which was destroyed in the December 2003 blaze. More information about this premiere event can be found on-line. Just take your web browser to www.dixifest.org and take a peek. (Via e-mail)

OUR GOLDEN PAST: CARL & JERRY "LIVE" AGAIN

Its time for a trip back to the 1950's. To a kinder and gentler Amateur Radio. Our tour guide for this journey is Bruce Tennant, K6PZW:

--]

Remember the names Carl and Jerry? Well if you were playing with ham radio in the 1950's and 1960's you are well aware that these are the first names of the two fictitious teenage electronic whizze's. Characters created by the late John T. Frye, W9EGV, for his long-running magazine series of the same name.

The Carl and Jerry stories appeared in Popular Electronics from October 1954 through December 1964. They told of the adventures of two perennial teenage boys who shared a special bond because of their shared love of music, electronics and radio. Now, many of these stories are again available to read to enjoy thanks to a new spot on the world-wide-web. Better yet, they are the kind of stuff you may want to read to your grandkids, especially if they have the same wonderment as you when you were their age.

Where are they and how do you these Pop Com classics? Thats easy. Just follow to link you will find in this weeks print edition of this Amateur Radio Newsline report. And good news for our sight impaired listeners. Word is that the print works well with most devices to help the blind to read as well.

Traveling back in time for the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, enjoying the past.

--

So far there are only 21 of the stories in the seriers on the web, but enough to keep you glued to your computer screen for several hours. They are there to read at http://home.gwi.net/~jdebell/pe/cj/cnjindex.htm (ARNewsline(tm))
**

INTERNATIONAL - IARU: NEW IARU REGION 2 ARDF WEBSITE

Back to the present and word that Region II of the International Amateur Radio Union now has web site to serve as the voice of its Amateur Radio Direction Finding Working Group. The site provide links to official rules and regional results along with contact information for A-R-D-F groups and individuals throughout the Region.

Plans call for the site to be in four languages that include English, Spanish, French, and Portuguese. If you have any comments or wish to volunteer with the translations, please contact Dale Hunt, WB6BYU or Ken Harker ,WM5R. Their respective e-mails are wb6byu@arrl.net and wm5r@arrl.net. The website can be found at www.ardf-r2.org (Press release)

**

INTERNATIONAL - UNITED KINGDOM: OFCOM NEW TELECOM REGULATOR

>From the international wire, word that Ofcom is name of the new regulator of Amateur Radio in the United Kingdom. The agency also holds responsibility for control other services that include broadcast television, radio, and numerous wireless communications services. More about Ofcom is on-line www.ofcom.org.uk (GB2RS)

**

INTERNATIONAL - VK: AN AUSTRALIAN LICENSE IS REQUIRED

A note to those of you who intend to operate from Australia on an extended visit. It appears that many amateurs, including those operating maritime mobile from within Australia's territorial waters, are using their own callsign with the 'stroke VK' suffix. Under Australian telecommunications law, this is

not permitted for any lengthy stay. Once past the grace period, all radio amateurs operating from Australia, and more importantly, from Australia's territorial waters must obtain an Australian license and individual VK callsign from the Australian Communications Authority. If you don't you will be told to go off the air. (Q-News, RSGB)

**

INTRUDER WATCH: HARMONICS BOTHER 20 METERS

An unidentified broadcaster on 14.280 MHz, has been identified as a harmonic of a Radio Liberty. The transmitter in question operates on 4.760 MHz and it's the 3rd harmonic that been heard in V-K-Land.

Meantime, another intruder on 14.320 MHz has been found to be Radio Uzbeckistan. This time it's the 2nd harmonic of a transmitter on 7.160 that's responsible for what's being heard. (Q-News)

**

WITH THE ARRL: MAJOR CHANGE IN DXCC POLICY ANNOUNCED

A major change in the criteria for determining what is a new DXCC entity. An ARRL news release says that the organizations Board of Directors has removed the guideline that provides for an entity to be added to the DXCC list if it has a separate International Amateur Radio Union member society. The ARRL says that this provision had the unintended consequence of bringing in applications for IARU membership that do not further the objectives of the organization. In fact, all it has done is to create what ARRL terms as an unfortunate and unnecessary administrative burden for the IARU. (ARRL)

**

DX

In DX, Dwayne Barbee KE4RVT is the latest ham on the air from war-torn Iraq. Q-R-Zed dot com reports that Barbee received his Amateur radio license from the Ministry of Communication on January 25th. He has been assigned YI9RVT and will be operating SSB and CW on all bands for the next 12 to 18 months from the city of Al Kut. (qrz.com)

And word that SM5DIC was scheduled to return to the Democratic Republic of Congo on the 20th of January. He will be there for two months and will operate the club call 9QZ0AR in his spare time. (GB2RS)

Also, AA1M and W1USN will be active as J3 stroke their home calls from Grenada to the 6th of February. They will operate CW, SSB and some PSK on the High Frequency bands. For all of these operations, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: RADIO FROM SPACE - THE SETI INSTITUTE IS MONITORING

Lastly this week, scientists searching the stars for aliens are convinced an E.T. is out there -- it's just that they haven't had the know-how to detect such a being. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--
Science Online says that technological advances have opened the way for scientists to check millions of previously unknown star systems, dramatically increasing the chances of finding intelligent life in outer space in the next 25 years.

The article quotes Seth Shostak. Shostak is the senior astronomer at California's non-profit Search for Extraterrestrial Intelligence Institute says that it is like looking for needles in the haystack that is our galaxy, but there could be thousands of needles out there. But on a recent visit to Australia to attend a conference on extraterrestrial research, Shostak said detecting alien life is only the start.

Since it was founded in 1984, the SETI Institute has monitored radio signals, hoping to pick up a transmission from outer space. Its Project Phoenix conducts two annual three-week sessions on a radio telescope at Arecibo, Puerto Rico. Project Phoenix, is the privately funded successor to an original NASA program that searched the heavens for signals from extra-terrestrial beings. That program was canceled in 1993 amid much skepticism in the Congress regarding the possibility of life in outer space.

For the Amateur Radio Newsline. I’m Norm Seeley, KI7UP

--

But Science Online says that the search has been slow. About 500 of 1,000 targeted stars have been examined and no extraterrestrial transmissions have been heard. (ScienceOnLine)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up close to a dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved. Now please stand by for a special

mesaage regarding Amateur Radio Newsline's current financial situation from Andy Jarema, N6TCQ. It following this 5 second pause.

--
5 sec pause
--

This is Andy Jarema, N6TCQ, Chief Financial Officer of the not-for-profit organization you know as the Amateur Radio Newsline. And once again, I am using the single word -- HELP! If you value this service, please help. We try to keep these kind of thing as subtle as we can.

You responded so wonderfully to our plea last April, and we haven't really asked for anything
since. But, unfortunately, your response dwindled in the waning months. The expenses of bringing you the up-to-date news on Amateur Radio did not.

We'd really like to hear from you. And we'd really like to hear from the repeater clubs out
there. These are the wonderful folks who re-transmit our broadcasts, bringing your nets increased value, and giving your members the latest in Amateur Radio news and information to enhance their hobby.

But Amateur Radio Newsline cannot continue without the funding needed to pay the monthly bills. And right now, we can't.

In the quarter century that it has existed, no one at the Amateur Radio Newsline has ever taken a salary. We all volunteer our time and talents. But what we ARE faced with are monthly expenses for gathering and delivering the news to YOU! We are talking telephone, Internet access and the like. This has not changed.

The bottom line is this: I'm asking that you try to find it within your organization or yourself as an amateur to continue this service. As we've said before, whether Amateur Radio Newsline continues to provide this service or if it disappears is totally your decision. We're here to serve
you for as long as you want us. Your response over the next several weeks will provide the answer.

The address for the Amateur Radio Newsline is Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you REALLY soon, I'm Andy Jarema, N-6-Tiny California Quake.

--End--

I wanted to do that at one time, and someone referred me to the
program Total Recorder. It isn't free but it's pretty cheap.But
I'm cheaper and I didn't buy it. You can download a free trial
version that will let you record for a trivially short amout of
time so you can't acutally get any use out of it but can see
how it works. The advanced edition even lets you schedule a
recording of a streaming program unattended. If it will work
on your computer (it's Windoze) you might want to check it out.

342. B95 Flint MI fires long time Morning Man Magoo for having Cancer

Newsgroup: rec.radio.broadcasting
Date: 2004-01-31 20:28:39 UTC
From: abirdinsnowsings@aol.com
Message-ID: <bvh35n$9u8$1@xuxa.iecc.com>
Source record: 6084

Unfortunately I wish this wasn't so, but for those who watched ABC 10 we saw it for ourselves.

Tony "Magoo, morning man at B95, a country station in Flint, has an aggresive form of throat cancer, it spread to his face, his mouth, his nodes, he lost almost all of his teeth, his immune system is now slim to nothing and he almost died of pneumonia.

During the time while Magoo was having his throat and mouth surgically scraped of cancer, going through radiation and chemo, having his nodes removed, and fighting off opportunistic infections, B95 decided to remove all traces of HIM from their office and website.

He called to ask what was going on, and they have him 3 choices, He could return to work with IV in arm, Broadcast from his sickbed (which management told him would make for compelling radio) or be fired.

Magoo, weak and sick, showed up at the B95 studios as he was told to do, they sat him at a desk where they had him do NOTHING. The program director, Coyote, had taken his morning slot. They then fired Magoo, refusing, because of some tiny loophole, to pay him severance, and saying he doesn't deserve disability.

He now has no job, no ability to get good health care because he has no money, and B95/Citadel in Flint MI has YET to explain why they fired him.

Is this how people treat one another? I would call, write, or even visit B95 and ask why they did this to Magoo? Why did they fire a man for being sick?

I guess they hate cancer patients.

The Annis Han-D-Mag is around $60 now, and does a pretty reasonable job of it.

I'd first, though, find out how it got magnetized in the first place. Has the machine been near anything with a strong magnetic field? Is a head blocking capacitor bad and throwing DC across the head?

A local studio might be willing to rent you a demagnetizer and a magnetometer so you can track the source of the problem down.

I covered this in alt.radio.broadcasting....but I'll go into detail here.

You want a device which is designed to provide the appropriate amount of magnetic flux to the head without overdriving the amplifier that it's connected to. Too much and you'll smoke a very low power device, too little and you won't do the job on the head. Thus, you need to get a head demagnetiser. They're not expensive. True, you won't be using as much as you would the tape machine you're maintaining, but it's a good investment, since your recordings (I would assume) are worth far more than the $20-30 a demagnetiser will set you back. If you're really strapped, perhaps you could borrow one from someone who has more resources, or maybe you could all buy one you could share, since you won't need it but for 10 seconds every 100 hours...surely under those circumstances there's no need to actually own one solely on your own.

If you have a full duplex sound card with digital in and out, put a patch cord between it's digital out and it's digital in..... Send the Real Audio to digital out... Use any program you like to record the signal from the digital in...

Hmm,

Out of curiosity, does anyone know of a realtime realaudio converter?

If you can hear it, you can record it. Run some program that records
a wav while playing the realaudio stream. If you've set up the right
Record source in your soundcard's mixer (probably found in the system
tray), you'll get a recording.

Windows\ Audio recorder will do. there are many more elegant
programs, from freeware upwards.

351. Commercially available outdoor FM antennas [Non directional beams]

Newsgroup: rec.radio.broadcasting
Date: 2004-02-02 15:41:59 UTC
From: Richard <nearlynews_email@ntlworld.com>
Message-ID: <bvlr47kdu1@xuxa.iecc.com>
Source record: 6091

Can anyone tell me what outdoor FM antennas are available that are
either dipoles, or folded dipoles, or end fed halfwave antennas,
,j-poles - etc? Not directional parasitic beams!

There seem to be slim pickings, or it's just my searching skills that
are naff! :c) You come across quite a lot of transmitting antennas but
I'm after receiving antennas.

One regular non-broadcast dipole I've found:

>http://www.maplin.co.uk/Products/Module.asp?CartID=040202140438851&Modu
leNo=873&MR=N<

Not bad, cheap.

Halfwave type:

http://www.ccrane.com/fanfare.asp

Probably good. Expensive!!

Folded dipole "halo":

>http://www.towerhillaerials.com/viewProd.phtml?ref=52&orderNumber=0<

Cheap, but I'd be tempted to bend this straight!:c)

Crossed dipoles:

http://www.funke.nl/aerials/fm.htm

No-one seems to sell receiving straight folded dipole!!

Any other similar products out there that you know about?

TIA.

Rich.

Jerrold makes a couple halo antennae. I'd go to folks like Jerrold,
Winegard, and the other TV outfits.

You can, of course, use transmitting antennae for receive, although you
will have to deal with it being 50 ohms source rather than 75.

You can make your own without much work.

No from live audio, say at a conference, to realAudio soyou can stream live
to the web?

I know there are hardware codecs for some formats that do realtime
conversion (minus latency), but is there a software or harware codec that
ctakes live audio and converts it in realtime to the RealAudio format?

I think for that you'd have to get the encoding/streaming software from
RealAudio. It's been 4 or 5 years since I looked into it, and at that time
they offered a simple basic one for free. Check their website.

Well, I have the following list:

Dipole: "Radio Rod"

Straight Folded Dipole: "R.1100-FM"

Circular Folded Dipole: "All-Rounder"; "FM1080" (Several makes)

S shaped Folded Dipole:?

Crossed Dipole (Turnstile) :"R.1100-FM OMNI"; "PR-6010"; "BTY-2-FM";
"FMSS"

End-Fed Halfwave: "FM-2G"; "ST-2"

J-type:? (Seen some broadcast type)

That's my list. If anyone can add any more models, feel free.

If you want a nice factory built folded dipole, just take one of the crossed dipoles, like radio shack sells, and remove one of the two dipoles and through it away. You are left with a single folded dipole with higher gain than the crossed dipole. That is what I use.

Regards,

John Byrns

For sale:

Partial interest in AM daytimer in tiny West Virginia.
Town of less than 800 (2000 census) but about 28,000
in the county. Below 1000 KHz dial spot.
Self-supporting tower. 1 KW days, 26 watts nights.

Only $150,000 including studio/office/xmtr building,
land and tower. Only AM in county. On air since 1949.

Joint venture. Active/inactive investors with at least
ten thousand dollars ($10,000)each are welcome. No
individual can own more than 49 percent. That goes for
me!

City of license is the county seat. Amazingly it has 4
motels, 8 restaurants, 4 grocers and even 1 Sears
store.

Radio Shack no longer sells the crossed dipole. I spent some time last month
trying to find one, ended up getting the last FM Yagi I could find in stock
in the Minneapolis_St. Paul area...looks like they are discontinuing that
too.

>

keep in mind that the RAM file is just a reference to the
URL of the real RA file (it is a text file with one link
in it). The RA file is the one with audio data in it.
That's the one you want.

Right click the link and select download. Save the RAM file
to your hd. Now open the ram file in a text editor like
notepad.

The contents of the ram file is the actual URL to the real
ra file.

Make a dummy html page with a HREF to the URL that you found
in the RAM file. Something like:

click

Open this html page in your web browser.
Right click on the link and select download.

Wait a bit.

You now have the RA file on your HD for offline
listening/archiving. Done.

I am using Super Mp3 Recorder at http://www.supermp3recorder.com and it's helpful.

370. 4CX5000A or simular

Newsgroup: rec.radio.broadcasting
Date: 2004-02-05 16:28:13 UTC
From: mail@catv-solutions.nl
Message-ID: <bvtqut$37e$1@xuxa.iecc.com>
Source record: 6008

My name is Onno de Vries and i'm living in the Netherland and building big amps is my hobby.
I just bought a 4CX 5000A on a radio market here for a good price (180 Euro) including socket.
Becourse the price was so good i took the challenge to build a 88-108 Mhz final from it.
I allready build many with all diferent kind of tube's but after some experimenting with this tube i found out that the anode resonator a a bit of a problem course of the high cappacity of the tube.
I try to do it with a double output coil (together Almost a half wave) wich you see in manny designs for 144 Mhz amateur amps using for example the russian tube GU84.
This works but it has a terrible efficiency,about 30%.
I hope that someone have experiance with big transmitters with 4CX5000A or simular in the final wich has about the same anode cappacity and inpedance.
I hope that somebody can give me some Info about making a good and high efficiend tank with these kind of tubes.

nospam,

Thanks for the input. I actually have figured that out after a while of 'playing' with these files. After extracting the correct URL the download with the freeware software I found seems to work. I got two overlapping shows but I guess that is because I downloaded two shows at once. That's easy to fix. The only problem I have right now is that 1. I have to write a program to automate all this as I plan to download lots of shows and 2. my car stereo does not accept CD-RW and does not have a line-input. I could burn it to CD-R which work ok. I have CD-Rs that I got pretty much for free but I don't want to tose them away stupidly due to evironment concerns....

Thanks,

Rob

Hi Onno,

RCA used the 4CX5000A as the final in their model BTF-10D 10kW FM transmitter. The manual doesn't include any photos that show the complete anode cavity, or even photos that show all the details. It's been nearly forty years since I have had hands on one of these, but basically there are two adjustable lines used as inductors in a pi network connected between the tube anode and the transmission line to the antenna. The first inductor is in parallel with the anode capacity. I will review the manual and see if I can figure out any of the details.

Regards,

John Byrns

374. Vintage 50's and 60's Radio Broadcasts for sale

Newsgroup: rec.radio.broadcasting
Date: 2004-02-06 00:22:50 UTC
From: rockitradio@aol.com
Message-ID: <bvumoqqtr1@xuxa.iecc.com>
Source record: 6014

They are called Airchecks and we are selling and expanding for sale our Rock-it Radio collection of recordings of Top 40 Radio of the 50's and 60's. These recordings have been digitally remastered at our studios and are unscoped which means they are uncut -- music, newscast and commercials are all included. We are continuing to remaster new releases as they become available. Here is the list we are offering at the moment.

1955 Alan Freed from March 5th, 1955 on WINS Radio New York.
1958 Mad Daddy Pete Myers November ?, 1958 on WJW in Cleveland
1959 Bill Balance from August 18,1959 on KFWB Los Angeles
1959 Alan Freed from November 5th, 1959 on WABC in New York - Note: this was one of his last broadcast before Payola scandal ruined his career.
1961 Elliot Field from January 6,1961 on KFWB Los Angeles
1963 B. Mitchel Reed from February 7, 1963 on KFWB Los Angeles
1964 The Real Don Steele (As the Emperor of North America) from July 23, 1964 on KISN Portland, Oregon (probably our most whimsical!)
1965 Casey Kasem on May 27th, 1965 on KRLA Radio Los Angeles
1979 4BC - Brisbane Australia Top 40 Weekly countdown with Bennie Dingo of November 4, 1979. First station we ever worked for.
1998 Rock-it Radio Christmas Special w/ Bennie Dingo (syndicated)
2003 Rock-it Radio Tribute to Johnny Cash - Featuring his SUN years recordings of the 50's. (Syndicated: Recorded Sept. 12, 2003)
2003 Rock-it Radio Christmas Special for 2003 (Syndicated)

All Airchecks are $9.50 each plus $1.50 shipping and handling. Each Recording is digitally remastered and placed on CD and average about 1 hour in length. Further descriptions and playlist of each show is available at our Ebay Store, where these are available at:
http://www.palmsradio.com/store.html

Satisfaction is guaranteed and 100% of all proceeds go to supporting Rock-it Radio Online and paying for internet and copyright costs to the entities that be.

Thank you for your time,

Bennie Dingo

For anyone interested, here's a reminder of upcoming DX tests; if anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least March (2004)".

Sunday, February 15, 2004 - WQMA-1520, Marks, MS 12:00-2:00 am CST.
WWW: http://www.q1520radio.com/

Please remember, what's listed as being on, say, Monday *may* be what you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting
me know, and please, drop the station personnel a note, via e-mail or snail
mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

The Collins 830F transmitter used this tube -- there's one still in
service as a backup here in the Boston area -- and the tube socket
sits on the deck of a 1/4-wave-length cavity that can be tuned
roughly by raising and lowering a sliding plate that forms the
"ceiling" of the cavity. Fine-tuning is accomplished by moving a
vertical plate inside the cavity connected to the cavity wall;
it acts as a shunt capacitor. Another capacitor in series with
the output RF sample loop acts as a loading control.

The Harris FM-25K power amplifier is similar but is built around
a larger tube (8990/4CX20,000A).

I don't think "special event" licenses are available in the US, the way they
are in Europe. And if you are looking to set up next week, you're about
two years too early to get an expermental license through the FCC. That's
probably the only way to do it.

As far as actual equipment goes, you can get a complete outfit from Klay
Anderson Audio for under $100k, I think. They outfit a lot of vans for
special event broadcast facilities and for the US military.

Amateur Radio Newsline™ Report 1382 – February 6, 2004

Amateur Radio Newsline report number 1382 with a release date of Friday, February 6, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A major problem for Amsat Oscar 40, a surprise BPL rollout in Pennsylvania, UPS says that illegal 10 meter radios will be ordered out of company trucks and another view of the ARRL's restructuring proposal. Find out the details on Amateur Radio Newsline report number 1382 coming your way right now.

(Billboard Cart Here)

HAM RADIO IN SPACE: AO-40 SUFFERS CATASTROPHIC POWER FAILURE

The main battery pack on board the AMSAT Oscar 40 satellite has failed and controllers are unsure if the bird can be brought back to life on the reserve power system. Amateur Radio Newsline's Norm Seeley, KI7UP, tells us what happened on-orbit:

--

According to AMSAT Executive Vice President Rick Hambly, W2GPS, AO-40 began its tumble to obscurity on Sunday, January 25th. That's when the satellites battery voltage momentarily dropped to 24 point 5 volts. This triggered a fail-safe that shut down the satellites passbands. Then, at the beginning of the eclipse on orbit 1486 the battery voltage rapidly dropped just below the cutoff voltage of 24.0 volts and this shut down the transmitters to protect the battery and other on board equipment.

AMSAT controllers kept a close eye on the bird and on Tuesday the 27th the battery voltage suddenly dropped from to 14V. Mission commanders currently believe that more battery cells short circuited. Control stations immediately began transmitting blind commands to the spacecraft in an attempt to switch over to the auxiliary battery. Eventually, the auxiliary battery pack came on line, but in parallel with the main pack. This means that the shorted main Ni-Cad battery is loading down the back-up Nickel Metal Hydride cells are clamping the voltage low and keeping the auxiliary battery from fully powering the spacecraft.

AMSAT is hopeful that one of the cells in the main battery will eventually fail open circuit. This would effectively remove the damaged battery from service and permit the back up battery to assume the full load of AO-40. In the meantime its a waiting game with fingers crossed that no other catastrophic failures to other parts of the satellite take place.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, in Scottsdale Arizona.

--

A set of spare A0-40 back-up batteries were found at the AMSAT lab in Orlando Florida. Using them Stan Wood, WA4NFY and Lou Mc Fadin, W5DID performed a series of tests that showed the auxiliary battery pack on board the satellite should work well if they are otherwise undamaged. Unfortunately, than will only happen if the main battery pack can be pulled off line.

**

HAM RADIO IN SPACE: MIKE FOALE TALKS HOME

Still with ham radio in space, Wednesday, January 28th was a very special day on board the International Space Station for Astronaut Mike Foale. That’s because the space traveler got the chance to speak to students at the school he used to attend and he did so using Amateur Radio. Take a listen:

The contact between Foale on board the I-S-S and the kids at The King’s School, Canterbury, England began at 17:42 UTC when the I-S-S answered the call of G-B-4-F-U-N. That station was operated by G-Zero-A-K-I and the audience kept its breath as Foale answered 12 questions.

--
Contact Audio - No print transcript
--

Media coverage of this contact was impressive. Meridian TV, BBC TV, BBC Radio Kent, Invicta Radio and the Kent Gazette interviewed the students and put reports in the main newscasts. The BBC World Service and the Press Association asked for information and contact transcripts. (ARISS, ON4WF)

**
THE BPL FIGHT: PA HAMS ORGANIZE TO FIGHT ALLENTOWN ROLLOUT

Hams in Northampton County in eastern Pennsylvania, just outside of Allentown, are organizing a campaign to protest announced plans by PP&L to offer Broadband Internet Service over power lines in a development in Hanover Township. The Allentown-based utility has been doing field tests of the technology in nearby Emmaus, Pa.

The ARRL's Eastern Pennsylvania Section Manager Eric Olena, WB3FPL says PP&L sent out 2,000 letters to residents in a section of Hanover Township and already has received replies from 200 people interested in subscribing to the service.

Olena says an ARRL District Emergency Coordinator and other hams met with township officials to warn them about the massive inteference Broadband over Power Lines brings to the radio spectrum, including fire and emergency

frequencies. But, he says, the officials apparently were swayed by the utility's assurances no such interference exists.

An interview with Olena and others involved in the battle, coming in next week's Newsline. (ARNewsline(tm), NT3V)

ENFORCEMENT: EVEN MORE COOPERATION COMBATTING 10 METER PIRATES FROM UPS

A follow-up to our recent story concerning the use of unlicensed 10 meter radio gear on-board United Parcel Service Trucks. As reported, back on January 7th the FCC notified the U-P-S offices in Elkhart Indinana and Middleburg Heights Ohio of its findings. The company offered its full cooperation to end the problem.

Now comes word from the FCC that they have been contacted by UPS national corporate headquarters has contacted the regulatory agency and the company did not mince any words. It told the FCC that the agency has its full cooperation in removing any unlicensed radio gear and any non-certified two-way gear from their delivery fleet, nation wide.

According to UPS, the only personally owned radio gear permitted in their trucks under a collective bargaining agreement with their union drivers are commercially built unmodified C-B sets, and that only on a regional as-needed basis. No other radios are allowed. (FCC, UPS, others)

**

ENFORCEMENT: THE FCC ACTIVE IN A NUMBER OF CASES

Meantime, the FCC has been active in a number of other enforcement issues involving ham radio operators. The agency’s Daryl Duckworth, NN0W, has more:

--
Duckworth: “An Extra class license was downgraded to Technician class due to a failure to appear for a retest in Solidad California. Also, cancellation of an Extra class license in Medera California for the same reason.

A notice for retesting was sent to a General class licensee in Hialeah Florida. The deadline for that one is March 1st.

A letter requesting additional information pursuant to Section 308(b) of the Communications Act -- in order to make a decision on a General class renewal went out to Newton Square PA..

A letter settling enforcement action with a General class licensee in Bart VT. has resulted in voice operation prohibited for three years on 20 meters.

Daryl Duckworth, NN0W, reporting.
--

Even though its still not naming names of alleged violators the FCC is making sure that those thinking about breaking its rules know its still around. (FCC, RAIN)

RESTRUCTURING: ANOTHER LOOK AT THE ARRL PROPOSAL

Even though there are more than a dozen restructuring proposals before the FCC, its the American Radio Relay Leagues recent filing that really has the world of Amateur Radio talking. The obvious question is why, and thats what we asked correspondant Mark Abramovich, NT3V, to find out:

--

As more amateurs find out what the ARRL has to say, they're starting to pay attention.

When the ARRL speaks, the FCC generally listens. In the past, the FCC has used the organization's proposals as a foundation for decisions.

To understand where the ARRL is coming from, you might want to get some perspective from the past. Who better to offer it than Harry Dannals W2HD - elected ARRL president in 1972 and re-elected to five consecutive terms. Now retired and living in Charlottesville, Va., Dannals is on top of the debate.

"It's a long cry from the days of incentive licensing when we did have people who resigned their membership, withdrew their membership, or did not renew their membership, just to show their disappointment and utter dissatisfaction with the incentive licensing proposal as it was named," Dannals recalls. "Because that was indeed (what it was), in the minds of the ARRL board headed at that time by President Herb Hoover.

He believed that in order for us to show that we were improving ourselves and becoming better at what we do that we should upgrade our license structure."

Dannals says the claim the ARRL proposal for a "no code" HF license "dumbs down" the hobby is off the mark.

"I think the new proposal, despite the criticism by those who say: 'I had to do it and therfore, you have to do it,' I think the new proposal will bring more people into amateur radio than the 'no code' proposal ever did," Dannals says.

Dannals says the Novice concept will go a long way in revitalizing interest.

"The introductory grade of license will give them some of the things that will make amateur radio mean more, the long-distance communication, the long friendships that develop over the many thousands of miles," Dannals says. "And I do believe we need this."

Dannals laughs at the fears that we'll need hundreds of FCC types to police the new hams.

"I think if the amateurs themselves who have experience, the older timers - and they don't have to be white-haired and grizzly old-timers - they can be relatively newcomers, maybe 5-10 years," Dannals says. "They can take care of tutoring the newcomers more than adequately."

Dannals says local radio clubs are the key to success for any license restructuring.

"Put out a handshake and say: 'Come on board. We'll help you, we'll teach the courses that you can use to get your license and we'll help you once you've got your license.' The old Elmering still is working."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Keep an ear open for more on this from both Harry Dannals and Mark Abramovich as all of the restructuring petitions wind their way through the FCC rules making process over the next several months. ARNewsline(tm))

ON RAIN: JIM HASYNIE W5JBP

Meantime an in-depth conversation about this issue with ARRL President Jim Haynie, W5JBP, is available from RAIN -- the Radio Amateur Information Network. Its in cyberspace at www.rainreport.com or on the phone at area code 847-827-7246. (RAIN)

**

REGULATORY: CROSS BORDER RADIO DISPUTE BETWEEN US AND MEXICO BROADCASTERS

A cross border radio war may be brewing between the United States and Mexico. This as complaints of massive interference to United States broadcast operations from a new station on 560 kHz in Tecate Tijuana Mexico lead to a high level telephone call between the FCC and the Mexico’s SCT on Thursday, January 29th. A call that many hoped will defuse the situation before it escalates any further.

According to the CGC Communicator, the SCT which is Mexico's telecommunications regulator is said to have promised swift action in eliminating the interference that XEKTT is currently causing to U.S. stations. But the story does not end here. Concern for Mexico's planned operations as XESS on 780 kHz and XEDD 920 kHz, also in the vicinity of Tijuana continues to mount. A printed copy the authorization for 780 kHz has surfaced. It confirms that operation with 20 kilowatts dayside and 10 kilowatts night with non-directional facilities both times and a quarter-wave tall broadcast tower is in fact sanctioned by the SCT.

The CGC Communicator says that this confirms the power figures it published a few weeks ago and establishes what it terms as more blow torch situations. Meanwhile, additional broadcasters are joining the list of companies concerned

with the current 560 kHz interference. (CGC)

**

ENFORCEMENT: THE FCC VS. THE SUPERBOWL HALFTIME SHOW

FCC Chairman Michael Powell has ordered an investigation of the telecast of last weeks Superbowl half-time show in which rock performer Justin Timberlake ripped part Janet Jackson costume on-camera. The stunt brought a massive number of complaints to the regulatory agency from viewers of the game.

In a press release obtained by the Amateur Radio Newsline, Powell states: “I am outraged at what I saw during the halftime show of the Super Bowl. Like millions of Americans, my family and I gathered around the television for a celebration. Instead, that celebration was tainted by a classless, crass and deplorable stunt. Our nation’s children, parents and citizens deserve better.”

CBS which aired the game denied that the incident was preplanned. None-the-less, Powell instructed the Commission to open an investigation into the broadcast. He also stated that the inquiry will be thorough and swift.

At least in theory, each station that permitted the video to be aired could be fined or have its license designated for as hearing if the investigation finds that the material was either indecent or obscene. (FCC release)

**

RESCUE RADIO: AGENCY WARNS OF BIG FIRE SEASON IN THE SOUTHWEST

Hams involved in emergency communications in the Western United States should get ready for a rather busy fire season. At least that’s what a recently released preliminary outlook for 2004 seems to imply. Bill Pasternak, WA6ITF, has the retails:

--

According to Jay Miller, W-A-5-W-H-N and Raleigh Stout A-C-5-J-W, the Southwest Area Coordination Center in Albuquerque, issued the report. The center is a multiagency hub for the region's wildfire operations and it says that persistent drought and millions of dead or dying trees have set the stage for a fire season as bad or worse than 2002. That’s when millions of acres burned across the region.

In southeastern Arizona and southern New Mexico, field surveys reveal that the snow pack holds less than 20% of the average moisture of a normal mid-winter. Coupled with the 2003 monsoon season being one of the driest in a century, the center says that tinderbox conditions are manifest.

And its going to get worse. With little relief in sight, the fire season, which usually begins in April, could start a month or more earlier. Public land managers are being urged to complete training and preparations sooner than usual and to put more firefighters on duty. It also means that hams involved in support of firefighting efforts will need to hone their skills a lot earlier

this year in order to be prepared.

For the Amateur Radio Nerwsline, I’m Bill Passternak, WA6ITF

--

Its beginning to look as if firefighters and the ham radio operators who support them may have a tough fire season ahead. (ARNewslin(tm), WA5WHN)

RESCUE RADIO: TEXAS CELLPHONE HERO

A 40-year-old flight attendant in El Paso, Texas is being hailed as a hero. This, for her fast and efficient handling of 15 to 20 9-1-1 calls which were sent to her home phone due to a routing error at S-B-C Communications.

News reports say that Maria Chaidez Karam processed the calls for help - including several emergencies - during the 41-minute glitch. In fact, she relayed details via her own cellular telephone to the police dispatch center's seven-digit non-emergency number.

Complete details about this story are on the web at http://www.borderlandnews.com/stories/borderland/20040119-70359.shtml (CGC)

**

RADIO LAW: ABRAMS VS. RPV - ANOTHER WIN

An update on the case of radio site owner Mark Abrams WA6DPB versus the city of Rancho Palos Verdes California. Abrams has been embroiled in litigation against the city for several years and has won every round, This is no different. The 9th Circuit Court of Appeals ruled on Thursday, January 15th, that Abrams is entitled to damages, attorneys fees and court costs from the city, but there is a catch. Abrams says that the decision only entitles him to a trial to determine the amount of money involved. It does not set an award amount. (WA6DPB)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE WAR ON TERROR: SECURITY ALERT FOR CELL PHONE GUNS

Don't be surprised if you're asked to make a call on your cellphone the next time you go through airport security. Time Magazine quotes sources as saying handguns disguised as regular cellular telephones have been seized in several

drug raids across Europe.

The potentially deadly devices look exactly like a normal cellular handset but are capable of rapidly firing four .22-caliber rounds of ammunition. They are manufactured in Croatia and are fired by punching buttons on the keypad

So far, none of the phony cellphones are known to have surfaced in the United States. Aviation security experts say screening equipment now in use can detect these cellphone guns as well as all other improvised explosive devices.. The rest is on-line at http://www.time.com/time/magazine/article/0,9171,1101040202-581402,00.html (CGC, Time Magazine)

**

POSTAL PROBLEMS: CQ INVESTIGATES DAMAGED MAGAZINES

If you are wondering why your ham radio and other magazines have been showing up with torn covers or their insides missing, you are not alone. So were the folks at CQ who were receiving complaints from their readers. So they launched their own probe and what they found that its likely a problem at the United States Postal Service.

According to CQ Publisher Dick Ross, K2MGA, the postal system has installed new equipment that’s designed to speed up the processing of mail through automated sorting. Ross says that it usually works quite well but unofficial information coming to him says that the units can cause problems if they are even slightly out of adjustment. As Ross says, it sounds as if the new technology demands maintenance far beyond having a service crew fix it when it breaks.

Ross says that his magazines have already taken steps to get around the problem until the postal service finds a permanent fix. This includes new imported paper for the magazine covers.

What Dick Ross found out about the foibles of the postal services automated sorting system makes good reading. You can find it on page 4 of the February issue of CQ Magazine. (CQ)

NAMES IN THE NEWS: FCC ENGINEER MICHAEL J. MARCUS HONORED BY IEEE

A word of congratulations to Dr. Michael J. Marcus, N3JMM, of the FCC’s Office of Engineering and Technology. This, after recently being conferred as a Fellow by the Institute of Electrical and Electronic Engineers based on his extraordinary record of accomplishment.

The IEEE chosen to honor Marcus’ contributions in the field of radio technologies with specific recognition to his creative technological vision that significantly advanced policies. This helped to lead to the deployment of spread spectrum and Wi- Fi technologies.

Dr. Marcus joined Office of Engineering and Technology in 1979 and currently serves as its Associate Chief for Technology. He received his bachelor's and doctorate degrees in electrical engineering from Massachusetts Institute of Technology. Before joining the FCC, Dr. Marcus worked for Bell Laboratories, the U. S. Air Force, and the Institute for Defense Analyses. (FCC release)

**

HAMFESTS: AM EXPO 2004 IN NEW JERSEY IN APRIL

Turning to the ham radio social calander, AmExpo, an event within an event will take place on Friday April 30 through Sunday May 2nd 2004 at the Millville Airport located in Millville, New Jersey. In addition to the hamfest, the 2004 "Wheels & Wings" air show is occurring at the Millville Airport at the same. This event features many extraordinary aerobatic exhibitions including the Air Force Thunderbirds. (

Meantime, Hugh McElroy, W2AVN says that AmExpo itself is a celebration of the evolution of communications. Included will be demonstrations of ham radio satellites, Echolink, along with HF, VHF and UHF radio communication in every mode. More information is on-line at www.p49millville.org. (W2AVN)

**

SEMINARS: COMM ACADEMY IN WASHINGTON IN MARCH

The sixth annual Communications Academy set for March 20th and 21st at the Shoreline Conference Center, in Shoreline, Washington just north of Seattle. This years theme is Interoperability and the Expanding Role of Amateur Radio Communications. The keynote speaker is retired Police Chief Gerald W. Boyd, KW7J. Boyd is the author of five books including three on amateur radio emergency communications. You can find out more in cyberspace at www.commacademy.org (Press release)

**

CONFERENCES: EASTERN VHF CONFERENCE IN CT. IN APRIL

And the 30th Annual Eastern VHF/UHF Conference will be held on April 16th to the 18th at the Radisson Hotel in Enfield, Connecticut. Guest speakers to date include Dan Henderson, N1ND, on the status of ARRL VHF/UHF Contesting & Awards, Del Schier, K1UHF, with a talk called What's New at West Mountain Radio and many others. And, as a special thank-you to all those who have supported the conference the planners are providing a free dinner to all who register for the event. More, including registration forms can be found on-line at www.newsvhf.com (VHF REflector)

**

INTERNATIONAL - UK: WORKED ALL BRITAIN AGM ON FEB 15

In international news, the Worked All Britain Awards Group Annual General Meeting will take place on the 15th of February. The venue is the Radiosport Communications and Computer Show at Stevenage in the United Kingdom. Nominations for the committee to consider should be sent to G0NLX at her call

book address no later than February 13th. (RSGB)

**

CONTEST OPERATIONS: K7BV TO TURKS AND CAICOS FOR ARRL DX CW

>From the contest calendar word that Dennis Motschenbacher K7BV will be in the Turks and Caicos Islands from Feb 19th to the 26th. This, to operate in the ARRL DX CW contest using the probable call sign of VP5M. He will use VP5 stroke K7BV outside the contest with operating emphasis placed on the WARC, 6 and 2 meter bands. VHF WSJT meteor scatter scheduled contacts can be arranged. QSL via KU9C. (VHF Reflector)

**

DX

In DX, word that five German operators are from Tobago active as 9Y4 slash their home calls through the 14th of February. Look for them around 14.277, 21.377 and 28.377 Mhz. (GB2RS)

And F6AIG is currently on the air from Mayotte. Look for him around 17.00 UTC on about 14.130 Mhz. (GB2RS)

Lastly, DL2GAC is again active as H44MS from Honiara in the Solomon Islands. He plans to stay there a while and is active on 80 through 10 meters on SSB. For all of these operations, please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: BROADBAND OVER POWERLINES - AUSTRALIA SHOULD WAIT AND SEE

And finally this week, the pitfalls of broadband over powerlines technology have been highlighted down-under by a group calling itself The Spectrum Issues Group Australia or S-I-G-A. This, in a letter published in the Sydney Morning Herald and The Age news papers. Q-News Graham Kemp, VK4BB has the details.

--

While BPL holds out the promise of always-on internet availability from every household power point, overseas experience with this new technology shows Australia should not rush into adopting it.

BPL/PLC systems installed here would cause significant interference to high frequency communications users across Australia which include emergency services, aircraft, police, rural and remote services, maritime, government agencies and private users such as we Radio Amateurs.

Roger Harrison, VK2ZRH, speaking for the group says they are an informal alliance of organisations and individuals across Australia with interests in RF communications and technologies. Alliance members come from broadcasting, community service bodies, consultancies, emergency services, equipment manufacturers and suppliers, government, industry bodies, the radio amateur community and other radiocommunications users.

Graham Kemp, VK4BB.

--

The S-I-G-A letter makes fascinating reading no matter where you are in the world. It can be viewed on line at the Fairfax f2 website. That U-R-L is in this weeks printed Amateur Radio Nerwsline report.

(DO NOT READ: http://smh.com.au/articles/2004/01/19/1074360700131.html)

Hallo Umar.

Thank's for responding. Atleast i have some transmitter type's wich
uses the 4CX type of tube's.
I did some searching on the net and found the Collins and the Harris
transmitters but no photo's, manuals or schematics wich i realy need
to bild this thing.
When i read Your story i understand a bit how they do it.....but a bit
is not enough.

Umar......thank's again for helping,if You know where i can find some
more info please let me know.

Regards. Onno.

386. FS: Almost heaven, West Virgina!! AM for sale.

Newsgroup: rec.radio.broadcasting
Date: 2004-02-07 19:24:01 UTC

For sale: (The "Radio Crazy" is baaaaaaak!!!)

Partial interest in AM radio station in West Virgina. Tiny town but about 29,000 in county. It is the county seat. Only AM in that county. On the air since the 1940s.

Joint venture. Total asking price is $150,000 including studio/office/transmitter building, land and HUGE 331 foot self-supporting tower. Low dial spot below 1 MHz. Daytimer. 1 KW days, 500 watts PSA and some night power sufficient to cover city of license.

Active or inactive investors with $10,000 each or more are welcome. All investors would be on the board with full voting rights if desired. No individual can own over 49 percent. That includes me! Zero-tolerance for bullies!

I am a semi-retired broadcast engineer.

References:

a-Mr. Larson E. Rapp. My parole office. ZingZing prison, Ossingstink, NY.

b-Trade reference: Brazilian Bandit Airways, Osh Kosh, WI. Purchased one-way ticket to Rio using all unmarked small bills.

Those properly identifying themselves will be given call letters and city of license.

Please!! No "AM bashers" or other negative nabobs! You wanna do "flaming", go to ICQ!

Tel: (478)741-1710 in Macon, GA.

I'm working producing a music CD, and we've done some work with WAVs
of the songs, and burning the spots off .wav files onto a CD is very
easy to do these days. And a lot cheaper than the otherwise very good
Sony being discussed.

You also can't tell the difference quality-wise either between the
Sony and a good PC burner.

Found some discarded long-form programs on CD recently, and the CD had
two 30-minute programs, plus four spots for each program as well.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Well i just wright a big reply........use the backspace button and my
mail was gone. Great....
O.k . Just start over all again. GRRRRRR.

Hallo Philip....first i have to excuse myself for not reply&#65533;ng Your
mail.
Sombody was and is still so friedly to sent me mail with a virus.
I had to install(ghost)my pc again and thatswy i lost mail and
adresses.

I just take a look at the site's You put on this page. Some i
allready saw bur the www.somis.org/ is verry interesting. I copy'd
much and printed it out.
They other site's has more to do with six meter transmitting.

But....Umar was talking about a Harris FM-25K. Well on the Harris
page(after much digging)i found much. I found two different kind of
schematics and a drawing of a cavity. Verry good.....i'm happy.....
The onely thing i have to do now is measure the socket or tube on the
drawing , compare it to the real size and than i can calculate the
size of the cavity.

THAN BILD THE THING.

If it's finish'd the AMP i will let You know all.

Philip and Umar.......thanks for helping me out.

Greetings from Elburg....the Netherlands. Onno.

P.S. This engine dynamo thing.....is it normal to build those things?....Crazy?.....awsome.

It all happens in the USA!

I flew over to some of these mobile amplifier "shootouts" and took a
bunch of pictures.

That van owner above lives in Florida.

He has another rack of high output alternators on the main engine in the
front.

He has full throttle control of both engines in the front.

I'm afraid your tube amp would not get much of a lookin as the champion
that day ran a pair of 4CX20,000's in the output of his amp:-)

By the way, one of your radio ships just came to the UK for a refit:

http://www.mvcommunicator.com/39400.html

Take care and good luck with your project.

Hello
I have changed out some tracks on my station at live365.com. It is at
http://www.live365.com/stations/304701

I have on the list:
KISN Portlan 1964 Don Steele
Larry Lujack 1970 WLS
Dave Rabbit intro for a bootleg station run by US military personnel in 1971
WABC July 4 1968 Dan Ingram
some PAMS jingles.

And more. I am scouring the fruited plain for more cuts. Stay tuned.

Also I want to start a Jive Five where you rate the top five tracks played
that month (I am job searching; may not be able to update the tracks
monthly). Email me your favorite track being played and I will tabulate the
results and post them on the station's page.
Ken

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, March 14, 2004 - WTOP-1500, Washington, DC will conduct a DX test from midnight - 1am EST. The test will consist of WTOP's regular all-news format; the station identifies frequently. The test will be run at WTOP's full power of 50000 watts, and will switch to a daytime-directional antenna pattern for the duration of the test.

Reception reports may be sent to:

WTOP Radio
3400 Idaho Avenue, NW
Washington, DC 20016

WWW: http://www.wtopnews.com/

(Arranged by Lynn Hollerman for the IRCA CPC.)

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

My recollection of a turnstile antenna is two folded dipoles at 90 degrees
to each other.
See URL:
http://www.qsl.net/wb8erj/turnstile_antenna.htm

A search of radio shack catalog does not show one nor is it in the manual
lookup section
However there is a Lindsay turnstile at URL:
http://www.lindsayelec.com/fm88-108.html

Easily found by using Google -- the searchers friend

Actually, the correct name for the antenna is a "Yagi-Uda", named after the two Japanese engineers who developed it.

Yes. Although not exactly clear, that is what the Winguard is, although I would have expected a little better radiation pattern. Note the data sheet gives "2 active elements" and the drawing sort of shows the othagonality. The 90 deg of twin lead is visible too.

> See URL:
> http://www.qsl.net/wb8erj/turnstile_antenna.htm
>
> A search of radio shack catalog does not show one nor is it in the manual

There is a part number (150-1639):

http://support.radioshack.com/support_video/32581.htm
(linked from http://support.radioshack.com/support_video/15785.htm)

> However there is a Lindsay turnstile at URL:
> http://www.lindsayelec.com/fm88-108.html

Probably very nice quality, but look at the price! Most consumers won't dream of spending that much.

Antennacraft makes one too.

http://www.antennacraft-tdp.com/pdfs/FMSS.pdf

http://www.starkelectronic.com/fm.htm

I'd say $19.20 is a little more like it for the consumer. I'd spray a few coats of Krylon Crystal Clear on it before I put it up.

Well, since WTOP will be running its regular all-news format, which is
simulcasted 24/7 on 820 and 107.7/Warrenton, VA, I guess so :)

But I don't think they're going to do anything special with the 820 or
107.7 transmitter power/direction/etc.

Mike

Yagi is the name of the man who invented the antenna design which bears his name,
yes. I believe he was (or possibly still is) Japanese.

It was invented in the 1930s by Mr. Yagi and Mr. Uda, whom I think were at
the University in Kyoto. Their book is still in print, I believe.

The Yagi was invented by two Japanese engineers, Hidetsu Yagi and
Shintaro Uda back in the 1930's. I do not know if either is still
alive, but they called it a Yagi-Uda.

I do, however, know that there is no Mr. Crest.

Did you try looking at the FCC website?

http://www.fcc.gov/eb/bccomplaints/

The Enforcement Bureau has two divisions responsible for handling broadcast complaints. The Investigations and Hearings Division is responsible for resolving complaints of non-technical broadcast violations such as complaints alleging broadcast of obscene and/or indecent material, violations of the FCC's rules regarding broadcast of hoaxes, licensee-conducted contests, broadcast of telephone conversation, and public inspection file requirements.

The Spectrum Enforcement Division resolves complaints of technical violations such as unauthorized operation of a broadcast station, violation of the Emergency Alert System (EAS) rules, antenna structure registration, marking and lighting rules, and operation with excessive power or at an unauthorized location.

Types of Complaints (each is a link)

* Broadcast of Obscene and/or Indecent Material Complaints
* Broadcast of Hoaxes
* Licensee-Conducted Contests
* Broadcast of Telephone Conversations
* Public File Requirements
* Payola and Sponsorship Identification
* Unlicensed Operation of Broadcast Stations
* Emergency Alert System
* Antenna Structure Information
* Broadcast Interference
* The FCC Enforcement Bureau: A Broadcaster's Guide

When many stations were "mom and pop's" or were part of much smaller companys (back in the 7-7-7 days of how many of what service one owner could have) it probably made stations more responsive to local people and community standards.

They were more dependent on income from the few stations they owned (compared to today), and had more time to listen to what was actually going on in those communities.

With the relaxing of ownership limits, and the ability to trade stations like baseball cards, and little requirement for the stations to be other than talk boxes or juke boxes, we have now what we have.

The situation is partly caused by the fact that most listeners don't realize they have some stake in the outcome of what happens at the federal level as it affects broadcasting, or realize that they have some mechanisms to have an effect there.

You snooze, you lose.

That's about to happen in Yuba City, CA (40+ miles north of Sacramento.)

The allotment for the only FM licensed to the city is more than likely going to be moved to a town closer to the Sacramento suburbs that would get its first aural service.

There are some reasons for the folks in Yuba City to fight the move, but the FCC's first priority in considering allotment petitions is first aural service for a community.

The station involved was just sold, and is already targeting Sacramento with a new 80's format from a new transmitter site that's closer to Sacramento.

The idea that a station allotted to Lincoln will actually SERVE Lincoln, (population 11,000) in the sense that many folks remember radio doing is absurd, given the current owner's quite visible (on Sacramento TV) aim for Sacramento.

There ought to be some mechanism available (more than just the community issues list and programming in response) that requires stations to serve, REALLY serve their communities of license.

That's not an issue for many stations that are either licensed to major markets and serve them, or are so far away that there's no temptation to do so because there's no economic benefit.

But for (primarily FM) stations that are 10, 20, and now 40-50 miles away... we see more and more trying to obtain the grass on the other side of the fence, instead of helping to improve the grass in their own communities.

It's even happend in the Yuba City MSA, where two stations in other counties call Yuba City "home," at the expense of their smaller Communities of License.

Unfortunately, the people in Colusa or Gridley never knew enough to say "boo" when the licensees did what they did.

Now, it's Yuba City's turn.

Ted.

Did WTOP have to get a special temporary authority to use daytime
power/pattern for this?

If not, what portion of the rules grants the authority to do so in the
middle of the night. "Experimental time?"

I bet if they go to daytime pattern in the evening, the folks in London
and San Francisco will also know when 495 is blocked at the 355 exit.
It'll be really interesting to see.
--scott

I actually like listening to WTOP on my way up the coast. I tune to WINS
next, and then to WBZ, so I get the traffic reports all the way up.

I'm in UK. You cannot buy the turnstile direct from FUNKE. Cost of "R.1100-
FM OMNI" to me is appx. $33.00. Google: R.1100- FM OMNI to see the item.

Another DXer asked me that same question; I asked the person that said they'd run the test if that were the case, and I have yet to have heard back. But if they're simucast, I'd imagine it will - but I know nothing about the pattern on the 820 station.

Probably Metro.

However, I fail to see how that is any different than the days when every radio station got its news straight off the AP teletype (which, ironically, is where Metro gets some of their news, too). There were, in any given market, only one or two radio stations able to afford to fully-staff a news department with news-seeking reporters; all the other stations had rip'n'read "newscasters."

WCBN WILL DESTROY YOUR FEEBLE FORMATS
=20
WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Recordings were played as a regular staple by the mid 1930s. As an example, Arthur Godfrey was the wake-up (morning) man on WJSV (now WTOP) during those years. He signed the transmitter on, took the readings, signed the log, etc.

In many cases these were 16-inch vinyl transcriptions from libraries rented to stations. They didn't have the surface noise problems on shellac disks. They were often of higher audio quality, especially the "World Broadcasting Corp" ones. They were sort of jumbo LPs. with 4 or 5 cuts on a side.

There was the day that Benny Goodman's band cut 50 tunes for World (IIRC). The members got $50 each for their efforts. Translated into today's dollars that would be like $800 or $1000 - a respectable sum.

Remember that there were only about 750 US radio stations in 1940, and a large percentage were on the networks. Networks didn't play records.

Stations playing the latest hit 78-rpm records appeared by 1940 or earlier.

In 1940 a major city like Washington,DC, had the four network stations and two independents. The independents were record-based. WWDC was very much a latest pop hit station.

Richmond, VA, had only 3 radio stations during WW2. They were on the 3 major networks. There would be a morning DJ, and also one during part of the afternoon. The (NBC) station I know most about never played records - only transcriptions.

And Johnny Mercer was a latecomer. Wasn't he a co-founder of Capitol Records, and thus would benefit from their products getting broadcast exposure. Capitol had their own transcription service/library, which probably included everything from their 78-rpm releases.

This is a very complicated issue, going back to the ASCAP monopoly, which ended withthe forming of BMI. Then the musicians' union required of many stations payment, or even the maintenance of an in house band to be able to play records.

I'm not an expert; you might seek out info on Barry Mishkind's site or do some web searches.

For sale:

Partial interest in AM radio station in West Virginia.
Small market. Non-directional daytimer with some night
power. On the air since 1949.

Total asking price is $150,000 and that includes the
HUGE 330 ft. plus self-supporting tower, land and the
combo studio/office/xmtr building.

It is the only AM in that county. Population of county
exceeds 25,000.

Joint venture. Active or inactive investors with at
least $10,000 (Ten grand, baby!)each are welcome. All
investors would be on the board with full voting
rights if desired.

I am NOT an agent, broker, shill, owner or part owner.
Even more important, I am NOT a crook!

431. ForSale LPB transmitters

Newsgroup: rec.radio.broadcasting
Date: 2004-02-13 17:04:04 UTC
From: Ben <w4wsm@nospaminsightbb.com>
Message-ID: <c0j024bcr1@xuxa.iecc.com>
Source record: 5971

Don't want to make this a for sale group but maybe someone here will have a need for these. Gotta make some money to buy into one of Meyer's stations!

I have both 5 watt and 25 watt versions of LPB's older tube type AM transmitters for sale. On my Motorola service monitor the 5 watt is doing about 4 watts out and the 25 is showing about 18. They are both on 580KHz.

I have some of the AC line interface units too. They are all missing one coil but everything else is there.

5watt: $100
25watt: $200
plus shipping from Bowling Green, KY 42101

Thanks,
Ben

Hi,

I reviewed the Digi 002 for radio World recently. To get the point across about what sorts of effects the Pro Tools LE software could do, I produced a promo and stuck it up on my website. Some folks have commented;

(A) It's pretty funny.

(B) You can do ALL of that with one mic, a laptop and PTLE?

Does this mean I'm falling back into the gravitational forces of my "production rat" radio roots?

Please help.

Regards,

Ty Ford

Very often the musician's union required one of their members to be present when records were played. When I first came to WOR in 1991 I was told their last sound effects person had only been let go a few years before. It took a long time to get the union rules changed to face a new world of recorded music. Many stations who are still in the buildings they used 20 years ago probably have one large studio big enough for an orchestra or 4 studios carved out of the big one.

Before 1440 Broadway was refurbished I saw the old studios. It was clear lots of live stuff originated there for both WOR and Mutual. They were studios you couldn't economically duplicate today. Air locks. Spring suspensions (WOR is just above the crossrails of nearly every subway line in the city in Times Square). If you were to try and record music without those isolated studios with today's ultra sensitive mics you'd have every car sounding like a low rider. The WOR Radio Network uses 20kHz satellite channels. I can picture every subway train that passes sending a 25Hz component that would trigger automation systems that use it.

Rich

434. Radio station logs!HELP!!!!!!!!!!

Newsgroup: rec.radio.broadcasting
Date: 2004-02-13 19:11:11 UTC
From: richmond45@juno.com
Message-ID: <c0j7gf$j1r$1@xuxa.iecc.com>

Does anyone have any information on FCC rules and regulations regarding retention of log times for advertisements? My company ran ads on several stations last year and we now need to verify the log times (what were the exact times and dates that they aired?) for those ads. Are radio stations required to keep such records? If so, how long are they required to keep them? Any help would be GREATLY appreciated!!

Radio stations usually keep commercial logs for at least a year.

I have to admit that your search will be costly in terms of hours, though. Did you receive invoices with the times on them?

The station I work for keeps program logs for three years and
transmitter logs for five years.

However, it's very common practice these days for invoices to include
spot play dates and times. Doublecheck to make sure your invoice
doesn't already give you that information.

438. Re: Radio station logs!HELP!!!!!!!!!!

Newsgroup: rec.radio.broadcasting
Date: 2004-02-14 17:44:32 UTC
From: Bob Haberkost <cbclistener-really!-@canada.com>
Message-ID: <c0lmq0$g68$1@xuxa.iecc.com>
Source record: 5978

Broadcast operations, despite relaxation of the requirement to do so, would do well to keep their logs for at least the term of license, plus 3 years.
With license terms up around, what, 7 years now, this is certainly an onerous undertaking, but the stations which do certainly have an advantage over those like this one who are having an awful time of it trying to find the support necessary.

Seeing as so many continuity logs are kept electronically, now, I don't see what the trouble is. And if the station in question hasn't invested the expense to store them electronically, this is when a lot of learning occurs. Good records are everything in a broadcast operation....having them usually satisfies all sort of questions posed by a visiting Field Officer, even if what's been alleged is true.

But now I see that the inquiry relates to a client-station relationship....good luck, because as I recall, there are no explicit log requirements now, seeing as there are no limits for commercial time, no minimums for news, no nothing. If you have a station which actually keeps and stores logs, then you've been lucky.

-- For direct replies, take out the contents between the hyphens. -Really!-

I don't believe they ARE required to keep that information anymore. From
what I understand, the FCC doesn't even require a station to have logs at
all. However, most DO...for their own purposes.

> My company ran
> >ads on several stations last year and we now need to verify the log

You, as rthe advertiser could have asked for affadvits for the
broadcasts...OR even airchecks.
(Something you could've stipulated before the spot buy.)

I listen to them up here in the Boston area whenever the ionosphere is
co-operative. IMHO, they have the best sounding audio on the AM dial.
Very clean high-end, notably free of IM - almost sound like FM. Anyone
know what they are using for processing? ---- and they don't play
"songs"!

TB

Here in Haverhill, Mass. - an interesting story =

http://www.wxrv.com/rivermusichall.shtml

WXRV-FM restored the live music studio that was built for WHAV(AM) in the late 1940s.

WHAV started as an AM station, also went on FM, and used the music studio space for other things (offices? storage? I don't know). In 1995, the AM license was sold off and the AM station moved their studio operation to Methuen. Since the FM station (WHAV-FM became WLYT, which became WXRV) is almost strictly 24-7 music, and now were all alone in the building at 30 How Street, they reclaimed the live music studio and they now use it for in-station performances by visiting guest artists.

Kinda bucks the industry trend. So does the station, by its mere existence as a standalone independent commercial FM outlet.

We will listen for them on that evening in Los Angeles...we dont have a station on 1500Khz here. 1480 is not very strong and 1520 is very weak...might be able to hear it...Eddie

Ask the question on the "mailbag" section of DCRTV.com . WTOP people read
and post regularly.

I visited their transmitter a few years ago. The modulation monitor needle
just stuck in the region near 100% - yet I agree they sound good. Shows
what you can do if you only have voice to deal with - and a good engineering
staff.

444. Re: Radio station logs!HELP!!!!!!!!!!

Newsgroup: rec.radio.broadcasting

>Does anyone have any information on FCC rules and regulations regarding retention of log times for advertisements?<

Logs of commercials are not required to be kept.

>From what I understand, the FCC doesn't even require a station to have logs at all.<

Incorrect. Logs must be kept for:

1) Tower light outages, and
2) All EAS alerts and tests.

pls excuse a bit of self-promotion but I'm proud of a show we're doing on
President's Day...Monday and maybe you'd like to catch it.
Dr. Bill Leavell, Editor and Publisher of the Washington Report newsletter and
I will be going through the President's...one by one starting with George
Washington. We'll look at them not as politicians or historical figures but
more in the "human" sense with odd bits and pieces about each.
It might be fun for you. In doing the research I've learned a lot

"falling back into the gravitational forces..." or just getting sucked back in?
Yeah, it sounds like production, all right, though I thought I heard accult for occult and perduction for production, but maybe that's just the result of MP3 on a cheap sound card (I've been mostly away from audio for almost a decade so I don't know how good or not mP3s are supposed to be).
I fully intend to steal the phrase "rusty ribbons", by the way, although you can make magnetic recording sound a lot more impressive and modern by referring to it as "molecular re-alignment" and you left out an important component of "Blue Star editing", a good splicing block.
You've reminded me just how much I miss doing production. I've been working the board for church services lately and it's really unnatural feeling to have all those sliders and knobs at my fingertips but never to get to go "on mic".

WCBN WILL DESTROY YOUR FEEBLE FORMATS
=20
WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,
hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an
intelligent fashion, and show links between musical genres.
=20

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the

Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

For sale:

(The "Radio Crazy" is baaaaaaak!!!)

Partial interest in AM radio station in small West Virginia community. On the air since 1949. 1 KW daytimer with 500 watts PSA and some night power sufficent to cover city of license.

Full asking price is only $150,000 and that includes the huge self-supporting tower, land and combo studio/office/xmtr building.

This is the only AM station in that county. Community is the county seat.

Joint venture: Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

I am NOT an agent, broker, shill, owner or part-owner. More importantly, I am NOT a crook.

My probation period with Mr. Larson E. Rapp (parole officer) is over and I have cancelled my one-way flight to Rio! Hi!

Tel: (478)741-1710 in Macon, GA. You will get an honest description of the situation.

Hi!

I've been developing software broadcast processors as a hobby for the past 4 years. My latest processor is called Energize II and is a plugin for software supporting VST plugins. It can also be used as a DirectX plugin using a DirectX-VST wrapper.

A light version can be downloaded from:

http://chrisbustad.tripod.com/

It would be great to hear some opinions about it, as it is still under developement!

Thanks!
Christofer Bustad

451. FM Broadcast band as we know it going away?

Newsgroup: rec.radio.broadcasting
Date: 2004-02-16 03:06:59 UTC
From: rahovland@earthlink.net
Message-ID: <c0pc4j$9aj$1@xuxa.iecc.com>

Dear Newsgroup,

Does anyone know the latest info about what is going to happen to the FM band when the FCC forces all of the VHF television stations to give up their broadcast band and switch to the new freqency allocations for digital TV? As you may or may not know, the FM band is located in between channels 6 and 7, I believe, and I would be surprised if the FCC would leave the FM band alone when the TV stations get out. They want to auction these soon-to-be-obsolete TV channel frequencies off to the highest bidder.

The consequences I think of when I consider the moving of the FM band are monstrous: what about all of the car radios, portable FM radios and walkmen, and collector hifi FM tuners that will suddenly become unusable without maybe some kind of adaptor which may or may not work very well?

To me, it just doesn't seem right that we need to have change for the sake of "progress", unless the progress is real and necessary. Many times it seems that these huge changes in the basic infrastructure of our communications industry are done for the sake of the economic enrichment of those companies who stand to profit richly from such a change, without giving much, or any, consideration to the consequences.

When a land developer decides to make major changes to a piece of undeveloped land, an environmental impact report has to be made before the developer can go ahead with their plans. Where is the impact report for this huge planned change in the FM band?

I would like to get comments from others who know more about this proposed change and when it is to occur.

Why should Mikey Powell give a rat's ass?

Really... we're going to all have to replace our TV sets when analog television signals are phased out, aren't we? (At least that's what I've been led to understand)

I personally have no desire to do so. I have digital cable. There is no additional attraction to having HDTV.

The people south of here in the Marianas - the hills that separate Apple Valley, California from San Bernardino - might benefit. But only the people south or east of the Apple Valley town line, in unincorporated San Bernardino County, because they can't get cable (Charter's franchises are in Hesperia and Apple Valley and Victorville, but they don't have an agreement for the unincorporated areas where not many people live)... and especially in the Marianas, with the big hills right to the south, satellite might not be an option either. (Going east of AV towards Lucerne and Big Bear, satellite should be doable as the hills aren't over there.)

I've *always* considered HDTV to be a solution looking for a problem...

> communications industry are done for the sake of the economic enrichment

That's fine. Mikey P. can buy me a new television set. :-P

There is none. I doubt that anyone at the FCC cares (although I'm sure people will pipe up and tell me I'm wrong :)

The FCC is not so doing, thus the consequences of such an action are
moot. (Just ask your friends at KOTA-DT channel 2.)

> digital TV?

No, they don't have to switch to new channels. They have a choice of using
the DTV on either of their channels. I'd imagine that many would choose
their VHF channel if DTV turns out to work well there.

> As you may or may not know, the FM band is located in between
> channels 6 and 7,

As are hundreds of other services.

> I would be surprised if the FCC would
> leave the FM band alone when the TV stations get out.

I see no connection what-so-ever between the TV switch to digital and any
effect on the FM band or any other services between 88 and 174 MHz. It
isn't as though FM stations were given a second frequency and have to choose
between it and their current one.

> They want to
> auction these soon-to-be-obsolete TV channel frequencies off to the
> highest bidder.

Right.

> The consequences I think of when I consider the moving of the FM band are
> monstrous: what about all of the car radios, portable FM radios and
> walkmen, and collector hifi FM tuners that will suddenly become unusable
> without maybe some kind of adaptor which may or may not work very well?

I'd say that there is 0.00000000000001 % chance that the FM band would be
moved. Where would it be moved to? TV was already allocated the UHF
channels where much of DTV is located. Anyhow, some DTV stations are
already on VHF, including channel 2. There is no other FM band for the
stations to move to.

> I would like to get comments from others who know more about this proposed
> change and when it is to occur.

Who said there was a proposed change for FM? I think you are making this up
from whole cloth.

TV is allocated a HUGE bandwidth. Modern receivers allow much closer spacing on UHF. The FCC is chosing to reclaim and sell some of this wasted bandwidth as part of the DTV situation. There is no parallel in FM.

> digital TV?

Best bet right now is that that's not going to happen. "Core spectrum",
into which all DTV will be placed, is channels 2-51.

The FCC changed their minds twice about which spectrum to allocate.
First, they said all DTV would be UHF. Then, they amended "core" to
read channels 7-51. Finally, they seemed to conclude not all stations
could be accomodated in 7-51, and added 2-6 to the list.

My employer, whose analog signal is on channel 4, drew digital channel
10. Our biggest competitor has an analog signal on channel 5 and a
digital on channel 56. They'll be forced to move their digital signal
to channel 5 after the analog signs off. Channel 6 in Philadelphia drew
digital channel 64, and will also be forced to move back to VHF after
analog closes. There are many other examples.

My guess is that the VHF stations didn't want to surrender the coverage
(and power efficiency) advantages of the lower channels; and the
land-mobile interests didn't want the large antennas and susceptibility
to sporadic-E interference inherent in VHF.

> channels 6 and 7, I believe, and I would be surprised if the FCC would
> leave the FM band alone when the TV stations get out. They want to
> auction these soon-to-be-obsolete TV channel frequencies off to the

FM indeed lies between channels 6 and 7 - just above channel 6. (you
can receive channel 6 audio on most FM radios)

The FCC has recently authorized "in band on channel" digital radio
broadcasts in the current 88-108 band.

It sure is a shame they didn't go through with their original plan. I would have liked to have seen channels 2-6, or at least channels 5 and 6, given over to the FM broadcast band. Just think of how IBOC and LPFM might have worked out if the FM band had a little room to expand!

>>

Nothing.

As soon as the conversion to D-TV is complete, the TV stations which were
temporarily relocated to other channels, some to VHF, but most to UHF, can
return to their original channel, but on digital.

A Japanese friend of mine says that "yagi" means "goat" in Japanese. So the antenna was invented by "Mr. Goat" and the antenna itself is the "goat antenna."

Well, I researched the FCC web site and discovered that logs are
required to be kept for 2 years, but only for tower outages, when the
call letters are announced and the time and sponsor of each "program",
whatever that means. It seems like the stations do keep logs of
advertisement log times, but my problem is that we bought the ads
through a 3rd party and we're trying to verify the log times that the
3rd party gave us, because we don't believe them. Unfortunately, if
the ads weren't bought directly from the station, they don't keep log
times or sponsor names. Sucks to be me.

Source record: 5901
Cross-posted to: alt.audio.pro.live-sound,alt.radio.broadcasting,alt.radio.broadcasting.open,rec.audio.marketplace,rec.audio.pro,rec.radio.broadcasting

I have two audio boards that I would like to trade for one smaller board. I have a Ward-Beck M1200 series board with all original paperwork. In working condition, recently removed from a dark radio station production room. This is a twelve channel board that uses Penny&Giles slide faders. More info or pictures upon request.

I also have a BE 10S350 10 channel board. Recently removed from the same dark radio station. This board also comes with the original manual. This is a ten channel stereo slide pot board. More info or pictures upon request.

I would like to trade these boards as a pair for a Mackie 1642-VLZ or a 1604-VLZ mixer, or a comparable mixer with at least 8 mic and 2 line inputs in good working condition. Also must have tape send and receive.

Shipping of these boards would not be practical, so I would be willing to meet someone up to 150 miles away from home to complete the deal in person.

Please remove NOSPAM to reply. Thanks for your time,

Kevin

That's an interesting question: could two TV channels worth of spectrum (12MHz) provide enough room to give each analog FM BC station a digital counterpart without using IBOC?

Since IBOC-AM seems to (more-or-less?!) work within 15KHz or so of bandwidth, it would seem a functional system with adequate quality to replace FM could be made to work with 120KHz available to each station.

But the FCC had a hard enough time fitting the DTV assignments into the channels they have. Even dropping one or two might prove a serious problem...

Well, the problem is that an inside source at this 3rd party, through whom we purchased the air time, told us that our spots might never have even run at all. So, even though this 3rd party gave us very detailed log times, obviously we're very interested in verifying these log times with another source. Unfortunately, it seems like radio stations don't keep sponsor information or even log times for 3rd party spots. (Sort of like a Paul Harvey kind of thing, but it's NOT Paul harvey that I'm talking about.) So, there doesn't seem to be a way to make sure that the 3rd party is telling the truth.

There would be enough bandwidth in a couple of 6-MHz TV channels to
make Eureka 147 work for every station in most markets....

On a more politically-correct note, there are interference constraints
between 8VSB transmissions on channel 6 and NCE-FM assignments which
resulted in very few TV stations being allocated DTV 6. (I think I
only found two when I looked. One of the original assignments was for
WCTX New Haven (moving from 59); they found that the constraints on
their power as a channel 6 were so confining that they arranged an
allocation swap with very-low-power WEDY New Haven, which didn't need
the coverage.) So it's conceivable that, after the transitional
period is through, channel 6 could still be cleared for other
purposes.

This sounds like a nightmare.

Perhaps the station keeps Production files--a cover page identifying the name of the advertiser and scripts and the rotation of commercials. If you entered this agreement in 4th quarter, lets say, you might be able to get this production information. I know we box up scripts, traffic sent from agencies for a year or so after its run.

Hope this helps

You're supposed to either listen to the broadcast for the ads yourself,
or hire another company to listen for you. Otherwise it's going to be
difficult to come up with any evidence for your case.

There are nine stations whose analog assignment is channel 6 and whose digital is above 51. Those stations would have to be accomodated elsewhere to clear channel 6 after transition. (I suppose that might be possible by using one of the channels freed by other stations in the same market.)

FWIW those nine stations are:

KVIE Sacramento (DTV-53)
WABG Greenwood, Miss. (DTV-54)
KOTV Tulsa (DTV-55)
WIPR San Juan (DTV-55)
KWQC Davenport, Ia. (DTV-56)
WCML Alpena, Mich. (DTV-57)
WKMG Orlando (DTV-58)
WLNS Lansing (DTV-59)
WPVI Philadelphia (DTV-64)

Also FWIW, there are eight stations whose analog assignment is channel 5 and whose digitals are outside core.

I've been impressed with our DTV. It does a pretty good job. WKRN's
does a darned good job too. I think something's broken with WTVF-DT,
they don't do anywhere near as well as their analog. (nor anywhere near
as well as WKRN-DT)

> Funny thing I'm just like 2 or 3 miles from the local ABC and can't
> receive it with the antenna pointing right at the tower but I can get

Probably, WBKO'd do a lot better if they'd splurge for a bigger tower...
(do it cooperatively with channel 40, they both could use the help...
of course, WSMV is better off with channel 40 having a wimpy signal<grin>)

I've seen WBKO-DT here, but only once and during a big tropo opening.
The KETs (which aren't all that powerful) are far more frequently seen.

This is an absurd notion, based on a lack of understanding.

There is a big chunk of spectrum between channels 6 and 7.

FM broadcast band 88-108MHz

The aero band, 108 to 136MHz or so.

Whatever is between 136 and 144MHz

2 meter amateur band, 144 to 148MHz

"Public service band" 148 to 174MHz
(I've lumped a lot here; paging, fire and police (at least in the
old days, MURS, the VHF marine band, the weather service broadcasts,
business use, etc).

Then comes channel 7.

So if they took the FM band away, there would still be a large chunk
there.

Take note that there is a 6MHz gap, a whole channel, between channels
4 and 5, which actually would be "in the way" more than the FM
band clustered with those other services that will not move.

What you also miss is the amount of spectrum that would be released
if TV vacated from the VHF frequencies (which the other posters
have indicated will not happen). 72MHz would be free, which is
in fact a massive amount of spectrum. TV is the widest bandwidth
signal commonly used, and you can fit an awful lot of stations in the
6MHz bandwidth used by one channel, the moreso now as schemes have
come into play to make better use of the spectrum for two way
communication.

So if the tv channels were released for other uses, a measly 20MHz for the FM band is nothing.

Even if none of this was true, except for TV there is very little need for continuous spectrum. So six MHz here, and six MHz there will result in 12MHz available, and they do not have to be adjacent. What we have seen is TV getting in the way. They were allocated over fifty years ago, when radio was still relatively unused. They took up large chunks of the VHF spectrum, no other service has so much allocation in the 30 to 300MHz range, and so whatever came later had to be fitted into whatever segments remained. Once the spectrum was full, there was no more space to put anything, even though in any given location there was always space lying empty, since no area has all tv channels in use. The other services don't need so big chunks, but TV is using any available space.

In other words, even if the tv channels were vacated for other uses, there is no reason to lump the FM broadcast band with them.

Michael

from http://www.rocklineradio.com/

Wednesday - February 18, 2004

The Genius of Frank Zappa

As ROCKLINE approaches its 23rd anniversary, we at the show become more and more aware of the incredible library of programs we have. With approximately one thousand, four hundred shows we have had a front row seat to Rock and Roll history. ROCKLINE provides a unique vantage point for watching American culture unfold before our very eyes and ears and to hear directly from the innovators about their perspective on Rock, their own contributions and the world in general. Throughout it all we have provided you the chance to speak with some of the most remarkable humans on the planet.

Without a doubt, one of the most amazing persons to enrich our world was Frank Zappa. With over 60 albums (60, that's not a typo) Frank continually pushed the boundaries, challenged us and helped change the way we perceive ourselves and those around us. Beyond The Beatles and a very short list of others, no one else can lay claim to such impact. To celebrate the release of the DVD "Baby Snakes" we are proud to present a reprise of the third ROCKLINE ever broadcast with the original host of the show B. Mitchell Reed and Frank Zappa. Taken from May 18, 1981, we will add new perspective to the Zappa story with fresh, brand new interviews from his son Dweezil, long time guitarist Steve Vai, and Frank's commander in chief on drums, Terry Bozzio. We will play some of Frank's most famous songs and portions of the Baby Snakes DVD as well. Plus, it is absolutely fantastic just to hear Frank's voice again in possibly the only national radio interview he did.

This is something we began only last year. Re-broadcasting truly special shows and moments and bringing them up to date with new, relevant interviews. We call them new, old shows. Call it what you like, but remember not to call at all on this night, as we present The Genius of Frank Zappa only on ROCKLINE!

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Monday, March 29, 2004 - WXHL-1550, Elkton, MD will conduct a DX test from 12:01 - 1am EST. The test will consist of numerous voice IDs and forgotten 70's and 80's Top 40 music and a few test tones. Currently, the engineer is uncertain of just what power the test will be run at; the station is normally 1000/1 w U3.

Currently, the engineer reports he is unable to respond to QSL requests or reception reports. Please contact me if you might be able to help.

Thanks!!

Lynn.

HI--Wow that sounds cool, actually seeing a station as a stand-alone,
serving a major metro, and doing local live 24/7! I wish that was
more commonly the case. I live in a radio desert of either
predictable playlists, or jukeboxes, or music for the college set.
I'd be listening to stuff in say NJ, Bulgaria, CA, Denver, Peru, etc.
if I had a computer at home...but, as far as "when did radio stations
start playing 78s?" question, I am actually more trying to figure out
when did stations start compiling "top ten" hit charts, which I am
very avidly seeking. Not knowing the history, I don't know what to
tell dealers in old newspapers, etc., what to look for. I AM PROBABLY
LOOKING FOR "TOP TENS" PRINTED IN NEWSPAPERS before 1957 or so, most
of all. I think they're more likely to turn up than the hand-out
flyers. I would be grateful for any information on the existence of
these (so that, if nothing else, I can know which newspapers to seek
in which cities), or to find anybody who clipped any of these out of
the paper. If you email me <fmerrilljr@DIESPAMDIEyahoo.com>
you'll get a message to me faster, probably. Thank you all...

Additionally, a copy of the invoices sent to the 3rd party might be acquired if the situation were explained to the station's traffic director.

If the production continuity was handled properly at the radio station, individual spots -- even from a 3rd party agency's roster of clients -- would be identified by ISCI code or some other ID so that the station know when to properly play which spot.

E.g. Agency XYZ is buying time for a roster of an insurance company's local agents. Each of those agents is to get a tag mention at the end of a generic :60 spot. The radio station might invoice Agency XYZ with the playback times of the :60 is this manner:

My Insurance Co + Tag TP 12:45 p.m.
My Insurance Co + Tag ES 2:38 p.m.
My Insurance Co + Tag GT 6:06 p.m.

The initials would stand for the individual insurance agent being tagged.

Keith,
I take it the STL is composite? If it was L/R discrete I would suggest running the Optimod out to the xmtr and do the processing there....
BUT in your case, it sounds like you need the XT chassis which is a 5 band compressor that works with the 8100 and was an option....may not be easy to find, though...Personally, I like the audio quality of the 8100...rich and full....but you have no EQ control....you might want to look at updating the Optimod internal cards and also adding the XT chassis...that can make a noticable difference in air sound....
DO NOT put anything after the OPTIMOD though...also you do not want any major COMPRESSION ahead of the 8100....it will fight the AGC in the 8100 and make the audio sound trashy....I HAVE used another processor ahead of an 8100 but with the 8100 in BYPASS mode and only acting as a limiter and Stereo Generator.....I had a 8200 at the studio and that fed a T1 and AES STL.....at the xmtr site, the L/R audio was picked out of both paths and fed to the 8100 thru a relay switch.....thus the audio was already processed...but as L/R I had to feed a Continental 802A exciter which is composite only...so the 8100 was used in a limited mode...but it worked! You probably need a audio EQ more than anything else ahead of the 8100 if it is set up right.....that will get you tha' thump!! ;)

If you need more info or if I can help more, sub wb5itt for nospam in the return address of my email!

What point is there in sending a card to a station test you didn't hear?
That's like asking for a QSL from Radio Netherlands because you didn't hear
it.

AHH FYI, There is only 4 MHz between TV 4 and 5....
72-76 MHz....not 6 MHz! Used for radio links (only is areas where TV 4
and 5 are not allocated/used) and model remote controls.

136-144 is government use....satellites (wx, etc) MARS, CAP, etc...even
Russia's MIR used 143.625 MHz as a comm channel....

Nah. They won't be asking for a QSL, they'll just be telling the station that they tried for them (but didn't hear them), and then thanking the station for running the test.

Just gives some feedback to the station that there were indeed those who were 'trying' to hear the test.

You obviously do not know how to finesse Prisms. I've had Texars blow the doors off the competition, without overmod, and do so in such a manner that, when compared to the original source, it was virtually indistinguishable from it.

For no reason in particular, would like to throw our station out into the spotlight.

98.1 KVET, in Austin, Texas.. We play tunes from Nashville that don't suck, And classic country, and Texas favorites.... a somewhat eclectic variety.

Our morning show is #1 12-plus. Hosted by Bob Cole and Sammy Allred (Yea.. THE Sam Gezzinslaw, of Geezinslaw Brothers fame.) And, to boot, we have Ray Benson as our "Station Voice." Whatta voice.

| The FCC is not so doing, thus the consequences of such an action are
| moot. (Just ask your friends at KOTA-DT channel 2.)

Evidently a few TVs are doing so already. KCSM San Mateo, CA (secondary PBS for the San Francisco Bay Area) announced in its March program guide that it will give up its analog allocation on channel 60 and will broadcast exclusively as DT on channel 43, multicasting at least two channels. The second channel will be a jazz channel complementing KCSM-FM. The primary reason, though, seems to be economic: "We made the decision that our resources needed to go toward serving more students by creating a whole new telecourse 'stream', rather than paying what amounts to double rent and electricity to continue our analog broadcast."

KCSM estimated that about 8% of its viewing audience will be affected. Cable and satellite feeds are to continue.

WKRN really does have a nice signal. So much better than the analog
with all it's co-channel.

I don't think BKO will ever go for a bigger stick. They never have
been on the cutting edge and they seem to be happy with covering the
surrounding counties. They have 4 antennas on the tower now with 13
and 24 both on it.

I spoke with 40's GM a little while back and he talked of a new tower
and an actual studio but it hasn't happened. I did turn the antenna
around and see the DT signal but it didn't impress me so it was back
to WSMV...I'm just glad the signal on 10 is so good up here.

KET is running 4 channels. Too bad we can't see the PBS HD stuff.
Wonder when 8 will turn on a transmitter?

What's the deal with the Sinclair stations? They looked bad enough
before DT but now they look like pixalated mush.

For anyone interested, here's a reminder of upcoming DX tests; if anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least March (2004)".

Sunday, March 14, 2004 - WTOP-1500, Washington, DC 12:00-1:00 am EST.
WWW: http://www.wtopnews.com/

Monday, March 29, 2004 - WXHL-1500, Elkton, MD 12:01-1:00 am EST.

Please remember, what's listed as being on, say, Monday *may* be what you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting
me know, and please, drop the station personnel a note, via e-mail or snail
mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Amazing.

Is all that spectrum bandwidth occupied by over-the-air TV really serving
only a small percentage of the population? Rural areas surely must still
rely on over-the-air TV.

As an aside, in the news report that Cox Cable and ESPN had made peace it
was reported that Cox will pay ESPN $2.61 per month for each of their cable
subscribers!

[Moderator's Note: Yes, rural areas do, to a certain extent, rely on over-
the-air TV, but in many cases, people probably have DSS or cable, like my
parents who live 40 miles east of Cleveland in Geauga County, Ohio, and get
most of their programming from Dish Network.

Here in Apple Valley, CA, and throughout the (mostly rural) High Desert,
there are probably more people who have to rely on over-the-air signals, but
the Los Angeles stations, which are 90 miles southwest of here, all have
translators sitting on a tower down in Hesperia. The tower isn't well
maintained, though, and I don't know whether Victorville's lone local TV
station, KHIZ-TV 64, has its transmitter in that area or not... my wife says
they don't, actually, and that their transmitter is up in Victorville near
their studio.

But in Apple Valley/Victorville/Hesperia, unless you live outside city limits,
you can get cable from Charter, and up in Barstow, you can get cable from...
mmm... I think it's Time Warner. And in spite of the mountainous terrain,
most homes in this area are properly situated to use DSS also.

Interesting note: Until the recent mandates allowing DSS providers to
carry local stations, my parents had to use an antenna to get Cleveland's
TV stations. They're 40 miles from Cleveland, about the same distance from
Erie, PA, and maybe 50 from Youngstown, Ohio, and they could get stations

from all three cities, but the signals weren't very strong. In spite of the fact that they could pay Dish $5 per month to get Cleveland local TV, I believe they still use their antenna. I have no clue why. **SJS]

499. DX test Results

Newsgroup: rec.radio.broadcasting
Date: 2004-02-20 19:01:44 UTC
From: ircamember@ircaonline.org
Message-ID: <c15liodbn1@xuxa.iecc.com>

Here's the results of the most recent DX test that have been received here:

Sunday, February 15, 2004 - WQMA-1520, Marks, MS tested 12:00-2:00am CST:

This test was heard throughout a large part of the US and Canada - many times, it was the code that got thru. Many DXers reported hearing the test; the station had said they were giving an award for the longest distance reception, but I have been unable to find that information on their log page. From the information I have received here, it appears that the farthest reception reported was in Seaside, OR, by DXer Pat Martin on a Drake R8 with terminated 1500' Eastern beverage, followed by Saul Chernos in Burnt River, ON, and Jeff Falconer in Clinton, ON. Also reporting hearing this test were:

Ken Wilson, Central, KY
John Hunter, Rossvile GA (near Chattanooga)
Dave Hochfelder, Highland Park, NJ
Mike Hardester, Jacksonville, NC
Patrick Griffith, Westminster, CO
Jim Myrick, Meridian, MS
Earl Higgins, St. Louis, MO
Steve Francis, Alcoa, TN
Michael Procop, Bedford, OH (near Cleveland)
Gerry Bishop, Niceville, FL
Bruce Winkelman, Tulsa, OK
Bill Dvorak, Madison, WI
Les Rayburn, Helena, AL (near Birmingham)
Curtis Sadowski, Paxton, IL
James Niven, Moody, TX
Mike Oswald, Houston, TX
Ward Jones, Dallas, TX

Most reported hearing code with QRM from KOMA-OK, KRHW-MO, WSAI-OH, and WLAC-TN; some recounted the music and/or announcements played.

However, there were some, mainly in the West, that tried for the test but weren't able to recive it; these included Vaugn Martin in Helena, MT, Nick Hall-Patch in Victoria, BC, Don Kaskey in San Francisco, CA, Art Peterson in Richmond, CA, Frank Aden in Boise, ID and Gordon Bell in Troy, NY - he is not far from WWKB, a 50 kW station.

Many reported how much they enjoyed the test; many thanks to WQMA!

That's all for now...

Lynn.

What's wrong with being polite and just saying "Thanks for running the test, but I couldn't get your signal at XXX"? Who knows, your response might point out a previously unknown problem to the CE! I try to always mention it in DX test announcements because I think a "thank you" reflects well on the DXing community.

Some years ago, my employer's TV station (since sold) was hit by a
devastating arson fire that wiped out its transmitter. The station
was off the air for weeks, but kept feeding cable headends. Ratings
were unchanged. Hardly any viewers noticed the on-air signal was
gone.

I'm sure the cable penetration is even higher now, although it's been
several years since I checked.

| Amazing.
|
| Is all that spectrum bandwidth occupied by over-the-air TV really serving
| only a small percentage of the population?

In the San Francisco Bay Area, it is quite likely. Yet NBC did
suffer a hit when it got into a snit with KRON (from losing the
bidding to buy the station) and flipped the affiliation to KNTV in
San Jose. An estimated 25% of the geographic area lost NBC service
over-the-air, but KNTV quickly arranged with Comcast's predecessor
to ensure cable carriage on area systems. In any event, KNTV has filed
to move to Mt. San Bruno (the site that KCSM-TV is leaving). But the
hit in ratings may have come more from KNTV's image (or lack of image)
in the market and having to compete with the San Francisco incumbent
stations in news. KNTV doesn't seem to be really committing the
resources or the brains to do it consistently right. It's passable
but feels like about Kansas City in quality.

Anyhow, due to the terrain of the Bay Area, as well as its
geographic expanse, there is no site that will serve all
areas well. There will be significant dead spots no matter
where the transmitter is located -- obviously, that's true
for FM as well. The best combination for FM stations seems to be a
Sutro (SF) or Beacon site with on-channel repeaters in the I-680 corridor
in the East Bay. TVs haven't tried that combination, possibly due to
the relatively heavy reliance on cable. KDTV does have a translator
in Santa Rosa (far North Bay), and KRON did have one there until KQED-DT
came on and wiped out channel 30.

This varies dramatically from market to market -- national "penetration" numbers for cable and satellite are averages, with some areas much lower, and others much higher. In the Dallas-Fort Worth area, off-air viewing of the local stations is still common, since we have one of the lowest cable penetration rates in the country, and not all satellite subscribers opt to pay the satellite company to provide what they can receive off-air for free.

Why pay $5/month to get what they're currently getting for free? It seems a very rational decision to me...especially since the antenna apparently provides signals from mulitple markets, something that Dish can't legally offer to them.

IMHO that's only half the problem. Even without the CCI here, the computer noise/leaky insulators are pretty bad - and when they aren't present, the signal can be just plain snowy.

But when the sporadic-E kicks in, well, you'd better have a DTV if you want to watch ABC... There have been days when I've had a snow-free signal from XEFB with some weak WKRN CCI in the background!

(then again, if you'd seen a picture of the XEFB transmitter site (I have), you'd know why they get out so well!)

> I don't think BKO will ever go for a bigger stick. They never have

> and 24 both on it.

I wonder if there might be some concern over WKRN (and as a result, ABC) getting bent out of shape if WBKO puts too much RF down into Tennessee?

> Wonder when 8 will turn on a transmitter?

8 just took out a STA for roughly 45kW ERP. Strange, as I thought I read their full-power transmitter was already ready to go & they were just waiting on the STL and encoder.

> What's the deal with the Sinclair stations? They looked bad enough
> before DT but now they look like pixalated mush.

I don't watch often enough to know... They've got five transmitters at the same site now (all three digitals and the analogs for 30 and 58) so I suppose STL bandwidth is at a premium...

For those that grew up in Los Angeles in the 1950's you will immediately recognize the name of Old H.H. -- Hunter Hancock -- who has the esteemed honor of being the First DJ in history to have the first show dedicated entirely to Rhythm and Blues then known as 'Race Records' in 1948.

Hunter Hancock finally retired in 1968 from KGFJ in Los Angeles. And had not broadcasted except for a LP for the 50's and 60's Cruisin' Series. Except Hunter Hancock did do one exclusive show for Rock-it Radio in Ventura, California in
the Fall of 2001 -- And at the age of 84 -- he proved he could still "Hunt with the best of them" on the Lane Quigley Memory Lane Show.

This show will be able to be heard as a rebroadcast online at Rock-it Radio Online
from our archives page at: http://www.palmsradio.com/rockittext.htm
And click to show #880 -- The show will be available to be heard for approximately 2 weeks from the initial airing beginning on 21 February, 2004.

Today Hunter is 87 years old and though in fraile health remains in High Spirits!

This show is also available as an Unscoped Aircheck in the Rock-it Radio Music Store, where all proceeds help to keep and pay the copyright fees it takes to keep these shows broadcasting over the internet.

The Rock-it Store is at: http://www.palmsradio.com/store.html

We invite all of you to tune into this DJ Icon of the 50's exclusively on Rock-it Radio Online

All the best,

Bennie Dingo

Who would be interested in this spectrum if its not used for Broadcast?
Not real practical for a mobile communications use since most systems now
use hand held radios and antennas at this band are not user friendly.
Maybe Rural high-speed Internet services?

I'm surprised 4 allowed 40 to go NBC. Most of 13's coverage area is
in KY of course and they used to claim they covered more counties of
KY than any other VHF. I kinda think WAVE may have taken that honor
now.

>I don't watch often enough to know... They've got five transmitters at

Actually, the preemphasis on FM nowadays with all the high end
processing can be done away with...to try to process (compress, limit,
clip) the 0-15 kHz spectrum and especially the high end, means you will
overshoot and overmodulate the xmtr unless you clip/limit the hell out
of it..but when you clip, you cause even more problems....
MOST engineers today agree that the PRE AND DE emphasis curves could be
done away with entirely...because the field has changed a lot since
Armstrong's days and the FCC's early development of the FM rules.
With today's processing and EQing, you really donot need PRE
emphasis...and if you donot need it, why have DE-emph in the rcvr???

The RIAA curve for records was done because of the material used & the
freq response in early days...technology has left that behind and that's
a moot point today...CD's donot have such a requirement...and I always
record my cassettes with Dolby C ON and then play them back with Dolby C
OFF so the high end sounds cleaner and brighter :)

If the rcvr makes had wanted to, they COULD have had flat response to
10-15 kHz in an analog rcvr and put a filter switch on it (like my Sony
XRA-33 AM STEREO car rcvr has)...but they didn't want to listen to car
buyers bitching about the noise and whine while listening to AM adj
channel...so they made the rcvrs narrow....same reason why 50% of the
time your radio FM stereo light is ON, you are actually listening in
blended mono!!!

For sale:

(The "Radio Crazy" is baaaaaaak!!!!) Hi!

Partial ownership in nice little AM daytimer in small West Virginia town. Non-directional, 1 KW days, 500 watts PSA and 26 watts at night. Night power more than sufficient to cover city of license.

Total asking price is $150,000 and that includes the HUGE 331 ft. self-supporting tower, land and combo studio/office/xmtr building.

Station is on the air since 1949. It is in the county seat. City of license population under 1,000 but almost 29,000 in county. This is the only AM in that county.

Joint venture: Active or inactive investors with at least $10,000 each are welcome. No individual can hold over 49 percent. That means me too! We want no "bullies" here!

You must be US citizen with no felony convictions or history of license revocation(s) with the FCC.

Tel: (478)741-1710 in Macon, GA.

I am NOT a broker, agent, shill, owner or part owner. More importantly, I am NOT a crook.

Cable isn't cheap - last I looked, the basic "lifeline" service (just
the local OTA stations and a couple of shopping channels) is $300/year
here. I know people who spend over $1,200/year for cable. Personally,
I'm willing to live with a fair amount of snow to save $300!

One year's "lifeline" cable charges here would buy a digital tuner. It
can be connected to their existing analog TV and antenna and will
deliver a fantastic picture & sound.

So am I. I suspect some money changed hands. (given that they were - maybe still are - simulcasting some of our newscasts) It would make a certain amount of sense to operate 40 as a satellite of 4.

Interesting. 58's analog hasn't improved much since the move. Their digital is the best of the bunch. To the best of my knowledge they never operated their digital from the old tower south of town - in fact, I don't recall their digital ever being authorized to operate from that tower.

Interesting also that 30's analog dropped. The towers are within a few dozen feet of each other, and the antenna height actually *increased* (by an entire 2 meters...) on the new tower. They were already running the max 5000kw, and still are, at least according to the FCC DB.

The reason for pre-emphasis has as much to do with the modualtion technique and the inherent limitations with the method.

If you're familiar with the sideband model for frequency modulation (the one represented on a spectrum analyzer), you may remember that 100% modulation (+/- 75kHz) will produce many more sidebands at 60Hz than it will at 6kHz. Because the amount of power in the sidebands for lower-frequency modulation is so much greater, the low frequencies are inherently quieter (because the limiter stages in FM demodulators have more to work with to strip out AM noise). Pre-emphasis was added to provide a modicum of noise improvement (by increasing the amount of power in the sidebands) for modulation frequencies which have a relative deficiency in modulation sidebands.

It's arguable whether the North American standard of 75uS is too much, and as I've never heard European-standard FM radio, I don't know if their 25uS preemp is too little or still too much, but the adoption of preemphasis compensation has nothing to do with the technology of the time - it's simply trying to circumvent the laws of physics, and those haven't changed since the beginnings of frequency modulation techniques.

Frankly, Chris, if you're having trouble dealing with high-frequency clipping with your processing set up, you've got it set up wrong, anyway. There's no way that the high end should be slamming against the pre-emp limit. No wonder you think Texars are trash, since it's so easy to use too much high end. Finesse is the key.

520. WXHL DX test - update!

Newsgroup: rec.radio.broadcasting
Date: 2004-02-23 21:15:23 UTC
From: ircamember@ircaonline.org
Message-ID: <c1dqhbcuq1@xuxa.iecc.com>
Source record: 5811
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

An update to my earlier message about the WXHL test...

DXer Les Rayburn has volunteered to help with responding to QSL reports for the test (MANY, MANY THANKS!!) *AND* he got a .wav file of WXHL's Morse ID to the engineer, so there will be code used in the test!

So, to repeat:

Monday, March 29, 2004 - WXHL-1550, Elkton, MD will conduct a DX test from 12:01 - 1am EST.

The test will consist of numerous voice IDs, code IDs, and forgotten/rare 70's and 80's Top 40 music and a few test tones. Currently, the engineer is uncertain of just what power the test will be run at; the station is normally 1000/1 w U3.

The station prefers that reception reports be e-mailed; send them to:

d_oetting@hotmail.com

The engineer (Dan Oetting) says he will respond to reception reports via e-mail but not via snail mail. However, in your e-mail, please CC: Les Rayburn at les@highnoonfilm.com. Les will respond to snail-mail reception reports with a special QSL card, printed just for the test. You can send your reports to Les at:

Les Rayburn
High Noon Film
100 Centerview Drive
Suite 111
Birmingham, AL 35216

Also, if you include your postal mailing address with your e-mail to Les, he will send you a card as well. PLEASE don't forget to include return postage!!

And remember, whether you hear the test or not, if you try for the test, please drop the station a note thanking them for running the test - and let me know about your results, too!

Thanks!

Lynn.

Wonder what side of the tower 30's antenna is? I know it was all alone
at the top of the old tower since they came on the air. A whole 2
meters! HA Just looking it looks shorter than the old one...

58 was almost unwatchable up here when they were at the old site. When
they turned on digital it was very weak. I spoke to someone that
worked on the 58 site one day on 444.775. He told me at that time he
couldn't see it across town.

Boy I bet this is a fun thread for everyone but us...

Ben
BTW, is David VanHooser still working there? Sure I didn't spell his
name right...

Dear IRCAMEMBER,
Thanks for your post. Pass on my appreciation of their efforts to get their station on the air. It does seem to be a lot of work. Let us know how the test went, and what response you got. Maximus.

Cable isn't cheap, but 1200/year is 100 per month. I don't pay that much
to Charter, and I not only have digital cable, I also have the $40/month
Internet service (it's the middle-of-the-line residential package, 768x128
Kbps, similar in bandwidth to many residential DSL packages).

Hmmm. Maybe they started at even lower power than they're using now?

I did note WNPT's DTV on the air this afternoon. It was off again by
primetime though. Obviously still testing.

(Via BDXC News at 16.40 this afternoon ..... great news at last!!!!)

This just in from manxradio.com news:

Long Wave broadcaster gets the go ahead

A long-wave radio station is to be set up in the North of the Island,
and could be on air by the end of the year.

A short time ago at Douglas Courthouse, Isle of Man International
Broadcasting PLC was told it could proceed with its plans.

Bride resident, Nick Cussons, had attempted to block them by lodging a
petition of doleance challenging the Communications Commission's decision to
award a substantive long wave broadcasting licence to IMIB.

However, Acting Deemster, Roger Kaye, threw out the petition and said
he saw no reason why the licence should be revoked.

IMIB chief executive Paul Rusling is delighted with the verdict.

After his petition was dismissed, Mr Cussons said he was disappointed
with the findings and is considering his options.

He now has six weeks to consider whether or not to file an appeal.

He does not intend to make a further statement at this time.

Here in the Boston area, the top tier package for Digital Cable
costs $94.20, HDTV is another $7.25, and if you want the Internet
that's another $42.95. Not counting the rental of the set-top box,
and all the taxes and extra fees.

It doesn't take more than a few hundred dollars to buy a box that just
generates a subcarrier with the station call sign.

But if you want to put actual useful information out from RDS, that can be
substantially more expensive.

Nationally Syndicated Radio Sales- Sports Radio

My client, a nationally syndicated radio sports talk show, is seeking an experienced sales executive to sell air-time. The successful individual will be an energetic salesperson who is capable of bringing on new business and maintaining current accounts from day one.

Job Responsibilities:
-Development of new accounts and maintenance of inherited existing accounts that include Nationally recognized Fortune 500 organizations.
-Marketing, collections and occasional writing of copy.
-Travel as required.

Qualifications:
-Minimum of 5 years experience with a proven sales track record.
-Must have sold syndicated radio and be familiar with its workings.
-Knowledge of sports is a major plus.

Compensation
-40% commission on sales.

Please forward your resume to jhand@djvassociates.com as a MS Word attachment. Thank you.

Amateur Radio Newsline™ Report 1384 February 20, 2004

Amateur Radio Newsline report number 1384 with a release date of Friday, February 20, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Reaction begins to the FCC on B-P-L, Hamvention will probably remain in Dayton and restructuring continues around the world. These stories and more coming your way on Amateur Radio Newsline report number 1384, right now.

(Billboard Cart Here)

**

THE BPL FIGHT: ARRL REACTS TO FCC NPRM

The ARRL and many others in ham radio are not happy with last weeks FCC decision to proceed with further implementation of Broadband Over Powerline, and they are making their position known. Amateur Radio Newsline's Mark Abramovich, NT3V, has been following developments and has more in this report:

--

To say American Radio Relay League President Jim Haynie W5JBP was disappointed with the FCC's decision to issue a Notice of Proposed Rulemaking on Broadband Over Powerlines might be an understatement.

Haynie sat in on the FCC's Feb. 12 meeting in Washington, D.C. and admits he was dumbfounded when many of the commissioners expressed excitement about the possibilities of BPL, ignoring interference concerns expressed by their technical staff.

"To have Commissioner (Kathleen) Abernathy come out in her initial speech that blew us away and her unbounded enthusiasm and then turn around at the hearing I attended and listen to Commissioner (Jonathan) Adelstein allude to unsubstantiated reports of interference and I was livid," Haynie says.

Haynie says the commissioners look more like cheerleaders for, than regulators of, the communications industry.

"It just seems to me though that the commission has gone from a regulatory agency to a Chamber of Commerce," Haynie says. "Their eagerness to implement this prior to the NTIA study rollout, which they actually have a letter from a congressman asking them to wait, seemed to me it was put on the fast track and try to beat the NTIA results."

Haynie says lots of what he heard about what's supposed to be in the NPRM does not bode well for amateur radio. But he says there are some burdens on the

electric utilities.

"They put a lot of constraints on the BPL industry," Haynie explains. "They have to react in real time, they have to be frequency agile. They have to have public web sites, they've got to have somebody on duty 24-7 to mitigate complaints of interference."

Ah, yes, interference. BPL proponents claim hams don't know what they're talking about.

"I've heard reports of some of the BPL industry spokesman who flat deny that there's a problem," Haynie says. "There never has been a problem, there can't be a problem. "In several interviews I've done with the regular press it was: 'Okay, go down a buy you a short-wave receiver at Radio Shack. Go down there and listen to it for yourself. I don't have to give you all these engineering data, you can hear it for yourself.'

"The utilities, they are being hand-held very carefully by the BPL industry and being told: "There's not a problem, there's not a problem.' "

Haynie says profit for the equipment manufacturers and the utilities is clearly the motive for BPL.

"Any CEO worth his salt who's running a power company is going to try to figure out more ways to get investment return for his investors," Haynie says. "He's got a grid there and if these salesmen come in and tell him: 'Well look, you know, we can bring you in an extra million dollars a day or million dollars a week for your power grid and it's not going to cost you anything other than just put these little devices on every quarter mile.' Why not?"

But Haynie says a recent Carnegie Mellon University study of the BPL business model identifies pitfalls.

"It would take 17 years for the recovery of the initial investment," Haynie says. "And that puzzled me until I read the article and it said because broadband is dropping, DSL dial-up is getting cheaper every month.

"Deals are coming out, Verizon's fixin' to come out with some more stuff. The old thing $30 a month is going to be high. And that's what BPL wants right now, $30 for a residential, $50 for a business."

Haynie accuses proponents of deception proponents in "selling" the concept. He says the claim it will finally connect rural areas of the country to high-speed internet access is, well, hogwash!

"We know that what the BPL industry wants to do is pick the low-hanging fruit, the high-density population areas," Haynie says. "But that's the selling point they're using on the (Capitol) Hill. And that's the selling point they use with the commission. I heard Chairman (Michael) Powell say that himself along with several of the other commissioners.

"They have been sold this bill of goods. And if anybody would stop and think about it, if it was such a good deal to serve five customers in a four-square-mile area, the DSL and the cable people would be doing it now."

Haynie says he's seen and heard criticism of ARRL, much of it declaring the League hasn't done enough to address the BPL threat.

"Let me assure you, we have done a lot, and we have talked to a lot of our potential allies," Haynie says."We've had one, in-face meeting in Washington. We do constant e-mails back and forth.

"But I am not going to, and the League is not going to, reveal all the things we're working on because that would be ridiculous to show the hand to the industry. Let them figure out what we're up to."

What can you do and where do Haynie and the League see this going? Tune in next week for part two of our interview with Jim Haynie W5JBP.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

Can radio services including ham radio survive with the level of interference that many experts say BPL will create? We will look into this in future reports. (ARNewsline (tm))

**

WITH THE ARRL: THREE LONGTIME AWARDS DISCONTINUED

Meantime, the ARRL Awards Branch has discontinued three longtime awards programs. Gone are the Rag Chewer's Club, the Old Timer's Club and the Friendship Awards.

According to the ARRL Letter, the society’s Membership Services Manager Wayne Mills, N7NG, says that the number of amateurs applying for awards in general has declined significantly over the years, and interest in these three awards had slowed to a trickle.

Mills says that the awards programs eliminated had outlived their interest level. He adds that the cessation of the three awards is effective immediately. (ARRL)

**

RESTRUCTURING: NEW RULES FOR DANISH HAMS

More restructuring of ham radio is taking place around the world. This, as a set of new Amateur Radio regulations have been introduced in Denmark that make the nation code-free. Jeramy Boot, G4NJH, reports:

--

The Danish Information Technology and Telecom Agency has announced new regulations for radio amateurs in Denmark. The main feature of the new regulations is the elimination of the Morse code examination for access to the HF bands. Danish radio amateurs are also now allowed to use parts of the 4-meter band without a special permit. These are: 70.0125 to 70.0625, 70.0875 to 70.1125, 70.3125 to 70.3875 and 70.4125 to 70.4875MHz. Beacons are allowed in the 70.0125 to 70.0500MHz portion of the band. Detailed Danish 70MHz band

plans can be found on the Internet.

I’m G4NJH in Nottingham.
--

The new regulations came into effect on the 1st of February. (GB2RS)

**

RESTRUCTURING: CROATIAN HAMS GET NEW PRIVILEGES ON 40 METERS

Croatia has become the first country in Region 1 to benefit from the expansion of the 40-meter band agreed at the World Radio Conference in Switzerland last summer. 9 A prefix amateurs have also been given privileges at 70 and 3400MHz and now no longer have to pass a Morse code test for access to the HF bands.

New amateur radio regulations came into effect in Croatia on the 26th of December but have only recently been announced to the world. Since that date Croatian amateurs have been permitted to operate between 7100 and 7200 kilohertz on a Secondary basis, with a maximum power of 1000 watts P-E-P. This is in addition to the normal Region 1 allocation of 7000 to 7100 kilohertz.

On 4 meters, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3400 and 3410 MHz, with a maximum permitted power of 150 watts.

And like so many other nations, the Morse code requirement for an H-F band access license has been dropped. Under the new regulations and there are now only two classes in Croatia. They are the full license and a beginners' ticket. (GB2RS)

CONVENTIONS: HAMVENTION HOPES TO STAY IN DAYTON

Hamvention will probably stay in the Dayton Ohio area. This, according to the event’s General Chairman Gary Des Combes, N8EMO. In an interview with the Rain Report, Des Combes says that Dayton is the Hamvention’s home:

--

Des Combes: “My personal goal, and the goal of all of the volunteers is to maintain the show in Dayton Ohio. This is where it started and we would love to have it stay here. The plan we have no is to continue to go in that direction.”

--

How do planners intend to do this?

--

Des Combes: “What we need to do as a volunteer team is to work smarter, harder and more efficiently. Make the dollar ‘squeal’ so that the cost to the attendee and the flea-marketer and the exhibitors stay reasonable.”

--

What about the rumors of a move away from Dayton?

--

Des Combes: “There have been questions, quite frankly, from the exhibitors and others about wanting to move to newer and nicer facilities, but there are significant costs associated with that, and its our goal to keep this show a volunteer show because -- quite frankly -- we can do it better and more economically than if we went to a larger venue.”

--

Keeping the show in Dayton is only a small part of what Gary De Combes has to say about Hamvention 2004. Part one of the Rain interview with De Combes is on-line right now at www.rainreport.com and on the phone at 847-827-7246. Part 2 will be available on Friday, February 27th.

Hamvention 2004 takes place May 14, 15 and 16th at its traditional home at the Hara Arena in Dayton Ohio. (ARNewsline (tm), RAIN)

ENFORCEMENT: EX-KG6IRO DUE BACK TO COURT

I’m Bill Pasternak, WA6ITF, with a late breaking story. Dateline Los Angeles California where former ham Jack Gerritsen, the ex-KG6IRO is headed back to court. This time for a probation hearing and sentenceing on charges that he tresspassed on a federal instalation. Bur local hams haqve gotten themselves involved in the sentencing proceedure and are trying to convince Judge Carolyn Turchin of United States District Court to ban Gerritsen from owening or operarating any transmitting equipment -- of any sort -- during his probation period.

This action appears to be a grass-roots effort by repeater owner operators all across Southern California who believe that Gerritsen is responsible for interference to their systems. They are asking all of their users and other hams in the area to send a letter to Judge Turchin explaining the importance of quashing any source of interference that could cause problems during emergencies. They also want to let the judge know all about Gerritsen’s past record and have her order him to stay away from ham radio or any other two-way service as a restriction of his probation.

Judge Turchin has set Monday, February 23rd for the hearing. Will let you know the outcome in next weeks Amateur Radio Newsline report. (ARNewsline(tm))

**

RADIO EDUCATION: TEXAS HAM DONATES STATION TO SCHOOL

The San Angelo Texas Planning Commission has approved a 40 foot Amateur Radio tower for Santa Rita Elementary School. San Angelo businessman, Kenneth Gunther, W5ZJ, plans to donate the tower, a rotor, antenna's and radio equipment to the educational institution. The radio gear and antenna system will allow students to learn about telecommunications technology and earn their ham radio licenses.

W5ZJ, is the owner of Gunter Wholesale Electric Company. His donated tower will be erected inside the courtyard of the elementary school's main building. Plans for the 40 foot tower passed 6-1 after a motion to allow a 50 foot tower failed 4-3. (San Angelo Standard Times, WB5T)

RADIO GOOD-GUYS: COLORADO YOUTH RADIOS IN REPORT OF FOUND POLICE TWO-WAY

A Highlands Ranch, Colorado, teen appears to have done the right thing when he found a Denver police radio on Monday the 16th. Not sure what the unit was, he used it to let the police force know he had it.

The 13-year-old boy found the radio in the yard of a nearby home. This, after he saw it thrown from a sport utility vehicle. The unidentified youngster retrieved it, figured out how to turn it on and used the radio to tell a police dispatcher that he had it.

Denver police and Douglas County sheriff's officials were working to retrieve the radio. Officials say that they hadn't been notified that a radio was missing, and investigators were trying to determine who it belonged to. They are also looking into how this radio got out of the City and County of Denver.

The complete story is on-line at rockymountainnews.com/drmn/local/article/0,1299,DRMN_15_2660662,00.html (Rocky Mountain News, CGC)

**

ROAD RADIO SAFETY: STUDY FINDS LOTS OF IN-CAR DISTRACTIONS

Drivers are distracted 16.1 percent of the time their vehicles were moving and cellphones nor two-way radio is not the main culprit. This, according to a study conducted by the auto club and researchers at the University of North Carolina.

The investigation tracked 70 drivers from North Carolina and Pennsylvania. It found that Cellular telephones were not the major distraction. In fact only 30 percent of the subjects used a cell phone while their vehicle was moving compared with 97 percent who leaned over to reach for something and 91 percent who fiddled with the controls on their car’s entertainment system.

The study found all drivers fiddle with their radios or engage in other distracting behavior. This, even when they're being watched as part of a study on distracted drivers. (Science OnLine)

**

HAM RADIO BUSINESS: NEW FROM CREATIVE SERVICES SOFTWARE

Turning to ham radio business, Creative Services Software has announced that version 3.0 of Pacterm for Windows and P K term for Windows will be released later this year. Version 3.0 not only includes new sound card modes, but also an integrated logging program to keep track of QSO's, DXCC and even do light contesting. It will also support exporting to ADIF for use with the ARRL Logbook of the World and to other logging programs, provide radio and rotor control, and be able to sync with Packet Clusters that are connected by the Packet window. More information on Creative Services Software products can be found at www.cssincorp.com (CSS via VHF Reflector)

**

THE ELECTRONICS INDUSTRY: CES PREDICTS GOOD SALES IN 2004

The Consumer Electronics Association -- better known by the initials CES -- says that the wholesale electronics market in 2004 is likely to grow to 100 point 99 billion dollars in sales. That's up 5 percent over 2003 and a major improvement over three years of negative or minimal growth.

CES is a trade group representing audio, video and mobile electronics makers. It says that the U.S. consumer electronics market is seeing a sharp growth in video products, which has helped to offset the decline in stand-alone audio products and in-car consumer electronics. Sales of new technologies such as plasma television screens were expected to generate nearly $1.5 billion in revenues for 2003, nearly tripling from $515 million just one year earlier. Growth in consumer electronics last peaked in 2000, when sales rose 12.7 percent to $96.37 billion over 1999. (Adapted from CES release)

CHANGING OF THE GUARD: LELAND SMITH, W5KL OF QCWA - S.K.

Some sad news to report QCWA President Emeritus Leland Smith, W5KL, has become a Silent Key. According to QCWA webmaster Bob Roske, N0UF, Smith passed away in his sleep the evening of February 15th.

In addition to being President Emeritus of QCWA, Smith served as Chairman of the organizations Scholarship Committee, was President of The Old-Old Timers Club and a member of The Society Of Wireless Pioneers. (QCWA)

**

CHANGING OF THE GUARD: RSGB PAST PRES. GEOFF STONE, G3FZL - S.K.

And word that Radio Society of Great Britain past president Geoff Stone, G3FZL, has also become a Silent Key. This following a long illness.

Stone served as the Society's President in 1964. The RSGB described him as a loyal servant of the Society, serving on Council and numerous boards including the VHF Committee. His funeral took place at on Wednesday, February 11th in South London. (RSGB)

**

HAM RADIO IN SPACE: AMSAT SAYS IT NEEDS $110,000 TO LAUNCH ECHO

AMSAT says that it urgently needs to raise $110,000 to help defray the launch of the Echo ham radio satellite. The bird is scheduled to ride into orbit thus coming June 29th, and the money has to be raided well before that date.

AMSAT like Amateur Radio Newsline is a federally recognized tax exempt 501(c)(3) organization, and your donation should be tax deductible in the United States. Information on how to support the Echo launch and other ham radio in space projects is on the web at www.amsat.org (AMSAT-NA)

**

HAM RADIO IN SPACE: U-O-SAT AT AGE 20

Meantime, there’s a big anniversary coming up for ham radio space operations. March 1st marks the 20th anniversary of the UO11 ham radio satellite on-orbit. We have more in this report:

--

On the 1st March the UO-11 ham radio satellite, which is also known as UOSAT 2 will have been in space for two decades. To mark the event, AMSAT-UK will be issuing a commemorative QSL card in exchange for listener reports from stations hearing the signals during the month of March. The reports must be made by way of the reporting page on the web site and the QSL card will be in the form of a downloadable "E-QSL".

By way of background, UO-11 was the second satellite to be launched by Martin Sweeting, G3YJO's, group at the University of Surrey in here in England. Its telemetry beacon can still be heard on 145.825 MHz FM using nothing more than a handheld 2 meter rig. There is also a 2401.5 MHz beacon but signal is not very strong and represents quite a challenge.

Depending on the status of the satellite, it sometimes goes into 'safe' mode, and the beacon transmitters are not activate for days at a time. Because of this, University of Surrey ground station controllers will attempt to maximise the number of days the transmitters are active during the month of March.

For the Amateur Radio Newsline, Rick Johnson, KA9VZD reporting.

--

An article and pictures about U O11 and the rules for filing reports are available on the AMSAT-UK website. Its in cyberspace at www.uk.amsat.org (AMSAT-UK)

**

RADIO IN SPACE: RADIO TELESCOPES DISCOVER NEW GALAXY

Using radio telescopes on Earth and another optical scope in space, a team of astrophysicists says it's detected a tiny galaxy that is the farthest known object from Earth. California Institute of Technology astronomer Richard Ellis says the galaxy is roughly 13 billion light-years from Earth. According to Science On Line, an expert at the Harvard-Smithsonian Center for Astrophysics in Massachusetts says the discovery gives a rare glimpse of the time when the first stars and galaxies began to emerge. (Science OnLine)

**

INTERNATIONAL - ISRAEL: A REPEATER FOR ALBANIA

Hagal International reports that the Israel Amateur Radio Club has donated a 2 meter repeater to Albania’s amateur radio society. Hopefully, by the time you read this it will be up and running in Tirana, which is Albania’s capital city. (Hagal International)

**

CONTEST CALENDAR: THE DIGITAL SKIRMISH

Turning to the contest calendar, "The Skirmish" - that’s the Troy Amateur Radio Association’s digital prefix contest, will be held on April 17. Categories include PSK31, PSK63, MFSK, RTTY, Packet, ASCII, SSTV and others with activity on 160 through 6 meters excluding the Warc bands. You can find additional information at www.n2ty.org/seasons/tara_seasons.html (Via E-Mail)

**

CONTEST CALENDAR: N3FTI FROM TURKS & CAICOS FOR ARRL DX CONTEST

Steve Kerns, N3FTI, says he will be on the island of Providenciales, Grid Square FL31 in the Turks & Caicos chain for this years ARRL World Wide DX Contest. During the contest, his group consisting of WE3C, KQ3V and himself will be active as VQ5A. This is the first time to Steve’s knowledge this prefix has been activated from the Turks and Caicos and the first time this prefix has been used by any station. During non-contest times listen for Steve operating as VP5 stroke N3FTI.

This contest runs for 48 hours from zero hours UTC on Saturday the 21st of February on all the contest bands between 160 and 10 meters. For more information the VQ5A operation, check www.qsl.net/n3fti on the world-wide-web (VHF Reflector)

**

DX

In D-X, word that LZ1ZF is celebrating his 35th anniversary of being on the amateur radio bands with the special callsign L35ZF. He is active on all bands and modes. until the 31st of December.

Also, SM0CCM will be active as J73CCM from Dominica through the 4th of March. He will operate on 160 to 6 meters mostly CW, with some RTTY and PSK 31. QSL as directed on the air.

And word that JA2EZD will be traveling in Vietnam and Cambodia through the end of the month. He plans to operate using the calls 3W2B and XU7AAA. Again, QSL as directed on the air.

And QSL Manager Jos&#65533; of Jesus Moura Costa, PS8ET tells Amateur Radio Newsline that he has relocated. His new address is Q-25 C-17 Parque Piau&#65533; Teresina, PI. 64.025-100 Brazil South Am&#65533;rica

Lastly, 4X4SIX is an Israeli 6 meter beacon operating on 50.080 MHz. The team of 4X6ON and 4Z5AY built the 5 watt station which announces its call sign around the clock in Morse using a J-Pole antenna.

(Above from various DX sources)

**

THAT FINAL ITEM: THE LONG HAM RADIO WALK

And finally this week, the story of a long walk that’s taking ham radio with it. Jim Meachen, ZL2BHF reports:

--

Tony Whitaker, G3RKL, from Sheffield, in the United Kingdom is off to New Zealand for a short walk. Well not exactly a short walk. More like 750 miles as Whitaker treks from Invercargill to Blenheim, along State Highway 6 up the West Coast of the South Island. And he will operate an Amateur Radio station along the way.

Whitaker will be on the air using the special callsign ZL6SHS on H-F, V-H-F and U-H-F while actually walking. He also plans to use F-M simplex, Echolink and I-R-L-P Internet-linked repeaters in places where they are available. He will use them to keep in touch with his ham radio friends back home in the U-K.

Whitaker’s marathon walk starts in Invercargill on the 21st of February. If all goes to plan he is scheduled to arrive in Blenheim on the 8th of April -- probably a bit tired -- but very satisfied. We will keep you posted on his progress.

For the Amateur Radio Newsline down-under, I’m Jim Meachen, ZL2BHF.

--

This is not Whitaker’s fist long ham radio walk. He has already made seven others including one in Australia. (GB2RS)

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, March 14, 2004 - KEVA-1240, Evanston, WY will conduct a DX test from 12:00 - 1am MST. The test will consist of numerous Morse code IDs (many thanks to Doug Smith (W9WI) for creating the CD!). More details will follow.

Reception reports(with return postage) may be sent to:

Michael Richard
KEVA-AM
P.O. Box 190
Evanston, WY 82931

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

http://www.msnbc.msn.com/id/4375426/

cites Howard Stern as being fired by Clear Channel.

WXRK/92.3, his flagship station, is owned by Infinitiy.

I believe the other two original affiliates, WYSP in Philadelphia and WJFK in DC, are also owned by Infinity. The Cleveland station where I used to listen to him is also owned by Infinity...

And the show is owned by Infinity.

How does Clear Channel figure in? Distribution, perhaps?

It figures, in that the media covering this story screwed up. :)

Clear Channel suspended Howard's show on the 6 stations in their chain
that carried him. That includes: Miami, San Diego, Orlando,
Pittsburgh, Rochester NY and Louisville KY. The CC stations in those
markets were just affiliates in the syndication deal. Some of the
print/wire stories the night it happened gave the wrong impression
that "Clear Channel was firing Howard", when, as you correctly note,
his home base and syndication deal are under Infinity. (He owns his
show, but the show's deal is with Infinity/WW1.)

The Stern show continues on his other affiliates, including all the
aforementioned Infinity-owned stations and other big market Infinity
O&O's like KLSX/Los Angeles. I read an article in the Washington Post
which would indicate that Infinity - at least for now - has no plans
to dump Howard either locally in NYC or otherwise.

I also haven't heard of any other non-Infinity-owned Howard affiliates
who are planning on dropping him (a handful of other affiliates are
owned by companies like Beasley, etc.).

Mike

Clear Channel's 6 stations are simply affiliates. They're under attack
and had to do something symbolic so Hogan could report to Congress
that they've taken action in a witchhunt environment. Once the
election is over Congress will return to screwing the country, Osama
will be caught just before the election (some say he's in a Pakistani
prison ready for a perp walk) and John Ashcroft will borrow Janet
Jackson's malfunctioning breast covering for use on the Scales of
Justice stature to purify it by covering its one bare breast.

Back to normal in November.

Rich

Stern's show was carried in syndication on a half-dozen or so CCU
stations, in much the same sort of arrangement by which Premier
(CCU-owned) shows are carried on non-CCU stations.

Mark Howell

http://svartifoss2.fcc.gov/cgi-bin/ws.exe/prod/cdbs/forms/prod/cdbsmenu.hts?context=25&app
n=100977646&formid=349&fac_num=83363

(read the exhibits, down at the bottom)

In a nutshell...

87.9MHz is a valid FM channel, but only for Class D stations and only
under VERY limited circumstances. So far, a 10-watt high-school station
in California is the only one to qualify for this frequency.

Until last week.

K201DR, a translator on 88.1 in Sun Valley, Nevada, got displaced by a
new full-power station on 88.3. The full-power station and another
translator precluded moving to any other frequency with a minor change.
Major changes are under freeze, and if the freeze isn't lifted within
12 months the K201DR license will be revoked.

K201DR argues that 87.9 is the only frequency available to them -- that
they're a Class D station (they're so listed in the FCC Database) -- and
that they won't interfere with any other station. (terrain shielding
from KVIE-TV channel 6)

FCC buys it, grants a CP, and assigns new call letters K200AA.

Odd question but does anyone know if KLME - 88.1 Battle Mountain Nevada
High school FM is still in operation?

Doug Smith W9WI wrote:

http://svartifoss2.fcc.gov/cgi-bin/ws.exe/prod/cdbs/forms/prod/cdbsmenu.hts?context=25&appn=100977646&formid=349&fac_num=83363

(read the exhibits, down at the bottom)

In a nutshell...

87.9MHz is a valid FM channel, but only for Class D stations and only

under VERY limited circumstances. So far, a 10-watt high-school
station

in California is the only one to qualify for this frequency.

Until last week.

K201DR, a translator on 88.1 in Sun Valley, Nevada, got displaced by
a

new full-power station on 88.3. The full-power station and another

translator precluded moving to any other frequency with a minor change.

Major changes are under freeze, and if the freeze isn't lifted
within

12 months the K201DR license will be revoked.

K201DR argues that 87.9 is the only frequency available to them -- that

they're a Class D station (they're so listed in the FCC Database) --
and

that they won't interfere with any other station. (terrain shielding

from KVIE-TV channel 6)

FCC buys it, grants a CP, and assigns new call letters K200AA.

www.bdsradio.com,

You can get it for one 6A-7P spot a day, M-Sun. You can go back a year if
you want.

There is no KLME in the FCC DB (just a KLME-LP which is in New Mexico)
and the only stations licensed to Battle Mountain, Nevada are translators.

It would depend a lot on the efficiency of the receiving antenna the
receiver was connected to.

The "blackout" zone is 1 volt/meter.

Any station, regardless of its power, has such a zone.

Good city service is 25 mV/m.

The area covered by the 25 mV/m signal is a function of frequency, power and
ground conductivity.

I've stood about a fourth of a block away from the tower array of a
50,000 watt station (WQEW-AM 1560 New York). With a satisfactory
quality pocket transistor radio.

The signal was extremely distorted. Overload.

Couldn't get any closer becasue of the damned fence around the
property.

That question is a non-starter. A poorly-designed reciever will probably freeze up within a mile of a 50kW antenna, while a superb one could likely take several volts-per-Meter and not even squeal, even when within the tuning house or at the base of the tower..

Don't know offhand, but you can have fluorescent bulbs light up near a
transmitter, and you can have a crystal set drive a speaker.

557. Re: What is the max power (dBm) a AM receiver can get in the real world?

The Raytheon manual on things to do with your CK-722 has a receiver
that uses a crystal set to develop enough DC to run a CK-722 receiver
tuned to the same station.

The obvious improvement is use a crystal set to listen to another
station entirely with the transistor radio.

It sucks a little of the energy out of the local broadcaster, reducing
his antenna pattern, so you can hear a more distant station.

Thanks for reply

A bit of ancient history - In 1974, KLME-FM, 88.1 went on air as the first high school owned and operated FM stereo
station in the state of Nevada from Battle Mountain High School - 10 watt studio and transmitter in High School.

>From about 12 noon till 4 PM - reel tape easy listening was played
from about 4 - 9 PM students programed in 1 hour shifts
from about 9 - 12 - reel tape rock

Student DJ's went to San Francisco to take 3rd class FCC license test

Wonder what happened to all of those LP's and 45's not to mention reel tapes.

FAZAMY wrote:
> Please explain what is meant by a station transmitting a sub-signal.

I presume you mean a "subcarrier"? (also known as "SCA" in the States and "SCMO" in Canada)

A very high-pitched signal (usually either 67 or 92KHz) is added to the audio before transmission. This high-pitched signal is modulated with additional information. In the early days of subcarriers, this "additional information" was a second audio program, usually background music. ("Muzak") More recently, it's been used for "talking books" for the visually impaired, and for various types of data transmission.

These subcarrier transmissions are not intended for reception by the general public - indeed, I believe the Electronic Communications Privacy Act makes it *illegal* for non-subscribers to monitor subcarriers.

Another data subcarrier at 57KHz is used for "RDS", a data transmission system that *is* intended for the general public. It transmits a continuous station ID, and can provide other information like format, frequencies of other transmitters carrying the same program, and a text string commonly used to show the name of the song being played.

Actually, FM stereo depends on yet another subcarrier, at 38KHz. This subcarrier contains a mix of the right and left channels, with the right channel 180 degrees out of phase. Mix the 38KHz subcarrier with the monophonic signal transmitted the normal way, and the right channel cancels out and you get only the left. Flip the subcarrier 180 degrees out of phase, mix it with the monophonic signal, and the *left* channel cancels out and you get only the *right*. Feed each to a separate speaker and voila: stereo.

You see, though, it's not dBm for AM radio....it's V/m, since there's no "typical" impedance associated with the receiving antenna.

And in the end it's still a question of receiver design, anyway. And, worth noting, is that different antenna designs will have different close-range propagation characteristics, so that it can't be specifically stated without knowing the antenna. This is, after all, why the FCC specifies inverse km measurements, and those measurements are done in far-field conditions.

Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, March 14, 2004 - WNNR-970, Jacksonville, FL and WVOJ-1570, Fernandina Beach, FL will conduct a DX test simultaneously from 12:00 midnight - 1am EST (the test may run longer). The test will consist of canned programming including Morse code IDs, tones, jingles, suprise guest announcements, and sound effects. Call in line is 1-877-900-WNNR. The stations will be on their maximum day powers of 1kW and 10 kW (ND-A), respectively.

Reception reports (with return postage) may be sent to:

Ron Gitschier, Engineering Dept.
WNNR 970/WVOJ 1570
8384 Baymeadows Road, Suite 1
Jacksonville, FL, 32256

PLEASE NOTE: a SASE is required!

E-mail: wgsr1570@nrcdxas.org

All correspondence will be answered; all correct reception reports will get veriletters on station letterhead, at the minimum.

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

Actually there is no sub carrier at 38 kHz, just the sidebands as it is
transmitted DSSC (Double sideband suppressed carrier). The 19 KHz pilot
is locked to the original 38 kHz and is used in the receiver to reinsert
the 38 kHz so to demodulate the sidebands.

Music Rotation System with DJs on Mind!

Greetings: My name is Norberto and I am a Radio DJ
at WIPR San Juan, Puerto Rico.

I created a Music Rotation System for my own benefit
and my audience. I thought the following information
might be of interest to your staff in specific to
Radio Disc Jockeys.

Music Rotation System (MRS) version 2.5b is a program
developed using Visual Basic, MS Access 2000 and with Radio Disk
Jockeys (DJs) in mind. But now, this small application
has evolved in to something more. Now it could be used
for the listening plasure at home. My intent was, and
still is, to assist on the preparation of radio shows
taking into consideration factors such length of show,
tracking of the played music (avoiding unnecessary
repetitions) and assisting the DJ in the organization
of the musical material. We have accomplished all this
and still giving the DJs great flexibility to mold their
taste and personal choices into a rotation system using
artificial intelligence. In other words, facilitating
all the functions of today's Radio DJs.

If you think this might interest you or your staff,
click below to obtain more information and/or download
a copy of this application.
http://www.geocities.com/norberto95aolcom/MRS.html

PD - Could you please, print this email and post it
into your bulleting board for the benefit of other DJ's.

Thanks.

>for this to happen ??

What do you mean? IBOC receivers are on the shelf right now. Kenwood
is probably the big vendor currently. Expect prices to drop, though.
Not that this is high end stuff by any stretch, but it's out there.

>I like quality gear but don't want to waste big bucks on traditional receiver if it will be
>obsolete in 6 months to a one year.

If you have a high end system, why do you even bother with a tuner anyway?
I will say that high end tuners like the McKay-Dymek are probably not ever
going to get digital back ends... and if anything, they are probably going
to have to be equipped with tighter and tighter IF filters to deal with the
noise issues.

hello-
i desparately need a service manual, PN DN-961FAS/M, for the Denon CD player, DN-961FA. these manuals were discontinued in June 2003 and we need a manual to support our 3 961FA machines. any help in locating a copy or an original would be greatly appreciated. i've tried all the Denon parts centers and they don't carry it.

573. For sale: Partial ownership in AM/FM station in Virginia

Newsgroup: rec.radio.broadcasting
Date: 2004-03-04 01:09:33 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c25vkd$7in$1@xuxa.iecc.com>
Source record: 5862

For sale:

THIS IS A NEW LISTING!!

Partial ownership of nice AM/FM in small Virginia
college town.

Asking price for the pair is only $400,000 including
the studio building, AM tower site and land. FM tower
site is on a mountain and leased for $400.00/month.

Joint venture: Active or inactive investors with
$20,000 min. are welcome. No individual can own more
than 49 percent of the stock. This rule applies to me
in addition to everyone else!

AM is 1 KW fulltime, non-directional, Class "C".
Formerly called class IV or local or graveyard! FM is
class "A".

There is a Jr. college in the community with about
1200 students.

This is the only commercial radio station in the
community. No other competing AMs or FMs in this town.
There are some feeble translators, just to set the
record straight.

I am NOT an agent, broker, shill, owner or part-owner.
I am more importantly NOT a crook!

References:

1-(My parole officer)Mr. Larson E. Rapp, c/o Zing-Zing
prison, Ossinstink, New York 12345.

2-(Trade reference)Brazilian Bandit Airways. Purchased
a one-way ticket to Rio using all cash. All small
unmarked bills. Do not worry, I will not be leaving
until all investors have invested!!! (grin!)

Tel: (478)741-1710 in Macon, GA.

Only those properly and fully identifying themselves
will be told call letters and city of license.

The "Radio Crazy" is baaaaaaaaaakk!!!!!

Thank your guys for all your answers. As scott mentioned, I want to
the possible max power (dBm) a receiver can get no matter it works or
not. I know it depends on a lot of things, like receiver antenna
efficiency. But could you give me a empirical number assuming that
reciever's antenna is most efficience in the thoery.

Thanks

575. KEVA DX test update

Newsgroup: rec.radio.broadcasting
Date: 2004-03-04 01:09:34 UTC
From: ircamember@ircaonline.org
Message-ID: <c25vke$7kg$1@xuxa.iecc.com>
Source record: 5864
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

An update to my earlier message about the KEVA test...

This test is on Sunday, March 14 from 1:00am-2:00am MST - that's
3:00-4:00am EST.

Reception reports(with return postage) may be sent to:

Michael J. Richard
KEVA-AM
P.O. Box 190
Evanston, WY 82930

E-mail: michaelj@1240keva.com or michaelj@vcn.com

The format of the test will be voice and Morse code IDs mixed in with
the station's regular classic country programming. The exact timing of
the voice/Morse IDs depends largely upon when the satellite service
takes their breaks (normally at :20, :30, :40)

And if you send a reception report to the station, please remember to
include return postage with your report...

Lynn.

Why?

And then, as I said, each antenna system is different at close range. It could be only a volt or two per meter, it could be several tens of volts...close enough, you might even be able to draw an arc off of the metal pieces.

It's too undefined a question to give you a definitive answer.

578. Quasi-Tivo for radio: Creative Nomad Jkbx 3

Newsgroup: rec.radio.broadcasting
Date: 2004-03-04 05:00:09 UTC
From: xx-google@telefog.com
Message-ID: <c26d4pmft1@xuxa.iecc.com>
Source record: 5867

I have a Creative Nomad Jukebox 3 that
holds 20 GB. I downloaded and installed
its newest firmware (version 1.40.06p)
which solved two shortcomings and allows
me to use the player as a quasi-Tivo for
radio. The NJB3 costs about $270, but less
on eBay.

The first former shortcoming: on long walks,
the player would often freeze (apparently
due to the motion) and require rebooting.
This no longer happens.

The second former shortcoming: the player would
record for a maximum of only 10 hours. The
new firmware allows "continuous" recording,
which means that at the 10-hour point,
it finishes its file and starts a new one,
and will do so repeatedly every 10 hours
until I stop it or until the battery dies
(although I always record with the NJB3's AC
adapter attached) or until it runs out of
disk space (the player holds about 300
hours of MP3s at 128 kbps).

Here's how I do "Tivo": I put a radio on KQED-FM
and patch its earphone output to the NJB3's
line-in jack, and set the NJB3 on continuous
recording. A day or even a few days later,
I stop the NJB3 and can then easily locate
the programs that I want to hear, because each
file recorded by the NJB is automatically tagged
with its duration and its ending time. And as with
Tivo, I can fast forward through portions that don't
interest me.

The reason that this can work for radio is
because audio files take up so much less disk space
than video files. Tivo would need an enourmous
hard drive or array of hard drives to afford
you the luxury of taping TV continuously; this
luxury does exist with radio on the NJB3.

The NJB3 records in MP3 stereo at bit rates of
between 64 kbps and 320 kbps.

The drawbacks:

(A) The NJB3 can't be programmed to switch stations, of course, so for this radio scheme to work, you'd need to have one station that airs enough programs that you want to hear to make it worthwhile; KQED-FM is such a station for me. Alternatively, you could switch stations on the radio manually once in a while, but most people would find that tedious to do or difficult to remember to do. Or maybe you'd only make shorter recordings -- say, of KALW's overnight programming.

(B) The NJB3's internal clock gains about 1 minute per week, which is atrocious accuracy (my $20 Casio watch gains only 1 second per week).

(C) Each time the NJB3 reaches the 10-hour mark, it takes about 2 seconds to get a new file going.

Serendipitously, items (B) and (C) partly cancel one another out. For example, on a 100-hour recording stretch (~4 days), (B) would result in the time advancing by about 36 seconds, while (C) would retard the time by about 23 seconds. The net effect is that the time in the recordings would advance by about 13 seconds during the 100 hours: a minor annoyance.

Overall, I find the NJB3 used in this way to be superior to Pogo's Radio YourWay, which records only in mono at a maximum of 32 kbps. David Pogue wrote this review of Radio YourWay in the Feb. 26 N.Y. Times:

****
****
****

YOU'VE heard of occupational hazards like tennis elbow, runner's knee, footballer's ankle. But those ailments pale next to the agony of the TiVo twitch.

This recently diagnosed condition is exhibited by owners of digital video recorders like TiVo and ReplayTV. Having become addicted to the seven-second replay button - an essential movie-watching tool in this era of special effects and mumbled dialogue - TiVo twitch sufferers are often seen reflexively pressing a nonexistent seven-second replay

button, even when they're not in front of the television. Their brains helplessly fire the deeply ingrained "Let me catch that again" command when they're listening to the car radio, enduring a flaky cellphone connection or savoring a hard-won apology from a spouse.

Truth is, you can't blame the brain for misfiring. It's bizarre that five years into the digital video-recorder era, you still can't buy a digital VCR for radio. Why has the electronics industry developed so many machines that let us time-shift Dr. Phil and "Saturday Night Live," but so few that do so for Dr. Joy Browne and "Science Friday"?

Actually, there is one such device. Radio YourWay (pogoproducts.com) looks at first glance like a pocket-size (2.2 by 3.9 by 0.7 inches) AM-FM transistor radio, which, in part, it is. But it also contains a built-in timer, so that you can set up a schedule for recording radio broadcasts. Programming it is exactly as easy - or as difficult - as programming a VCR, except that it uses a military-style 24-hour clock instead of AM and PM designations.

At the specified time, the radio turns itself on. It tunes in the station, records for the requested interval and then turns off.

Once you've captured a show, you can play it back at a more convenient time (or in an area with no reception), pause it while you take a shower or a meeting, fast-forward through the ads, or even archive it to a Windows PC using a U.S.B. cable.

As if all this weren't enticing enough, the Radio YourWay (RYW) has a built-in microphone that captures voice notes with a single button press. It, too, can record according to a schedule, a feature sure to be a hit with private investigators and spies.

There's also a line input that can record from CD players and other gear, and even a small but crisp-sounding speaker so that you don't have to wedge earbuds into your ear canals every time you want a playback. (Take that, iPod!)

But wait, there's more. The RYW can also play MP3 music files from your computer and even act as an external PC hard drive for transporting data files from place to place. All of this comes in a package about the size of a deck of cards for $150 (for the 32-megabyte model, which holds 4.5 hours of recordings) or $200 (128 megabytes, 18 hours). Both models accept Secure Digital memory cards that can hold even more recordings.

The bad news is that, well, that's all the good news. Despite the overwhelming brilliance of the concept, the rest of the story is all downhill.

The first devastating discovery is the recording quality. Now, MP3 music fans measure quality in kilobits per second (Kbps), a gauge of how much computer data is used to represent the music. They record music at 192 Kbps for great quality; 128 Kbps to save space on their

music players, at some cost to sonic quality; and 96 Kpbs when they just want a beat to jog to.

By contrast, the RYW records in mono, and at - get this - 32 Kbps. Recorded music sounds like muffled party tunes coming through your wall from the apartment next door.

Talk radio doesn't suffer nearly as much. It still sounds much duller than the original broadcast, but it's tolerable. As Captain Kirk might say, "Set expectations to Low."

Reception is another problem. In a neighborhood where my Toyota Corolla receives nine AM stations clearly, the RYW pulls in only three. You get no FM reception at all unless you plug in either the earbuds (whose cord is an antenna) or the included FM antenna (also a cord) - and even then, the stations and their signal strength are limited. At Yahoo's helpful Radio YourWay bulletin board (groups.yahoo.com/group/radioyourway), the surprisingly polarized fans and foes describe delicate window-sill positioning, buying stronger antennas, and other workarounds.

Another delicate subject is battery life. The manufacturer estimates that a pair of AAA's will drive the device for 9 to 11 hours; in the real world, that's optimistic by a couple of hours. Sooner or later, you'll realize that a set of rechargeable AAA-size NiMH's is an essential accessory.

It's too bad that there's no backlighting; you can see the screen and buttons only in good light. In general, though, the hardware design is rewarding and logical. How many other music players, for example, offer the luxury of separate previous-track and next-track buttons (|<< and >>>|) and rewind and fast-forward buttons (<< and >>)?

But the software needs work. The crisp liquid crystal display provides no information about when a recording was made or from what radio station. And while you can load MP3 files onto the player from a PC, using the included Windows software, the player can't show you song or album names.

If you turn the player off, it remembers where you were in a recording. (Pogo added this feature in a late-2003 "firmware upgrade." New players come with it; older players must be upgraded at the factory, which will cost you $10.)

But here's another gripe that's loudly expressed online: In all other circumstances, the player doesn't "bookmark" your spot. If you listen to the first half of a recording (say, "Car Talk"), switch to live radio or another recording, and then return to "Car Talk," you have to start from the beginning or manually fast-forward to the spot where you stopped.

Finally, the RYW records in a proprietary audio format called RVF. Pogo's transfer software can convert your recordings into standard WAV

files on your PC. But what most people want, of course, isn't space-hogging WAV files, but the more compact MP3 format - and getting to MP3 requires two separate conversions. (Or one smart download of RVFMP3, a free RVF-to-MP3 converter available from www.eonet.ne.jp/~y-katow.) Even the manual seems to be excellence-phobic. It's filled with punctuation gems: "It will seem like you are changing the start time when setting the ending time but trust us you are setting the ending time."

In short, almost every aspect of Radio YourWay needs improvement. But what's the alternative? Music players like the Samsung YP-910 GS can record from the radio, but only FM and not on a schedule; software like Replay Radio can record on a schedule, but only from Web-based stations or from external radio tuners, and only with a PC.

And when you're the only game in town, you may not be in any particular hurry to fix the glitches. (Insert your own Microsoft joke here.)

You'll wish that Pogo had polished the thing up, improved the recording quality and added a backlight. But if you can find a spot where the reception is good, and if the broadcasts you want to time-shift are primarily talk shows, you'll have to admit that the compact, rugged, extremely versatile Radio YourWay does what it's supposed to. It may not be radio your way, but it's at least radio a better way.

579. More WKYC-FM history

Newsgroup: rec.radio.broadcasting
Date: 2004-03-04 16:16:46 UTC
From: jeffhs@ameritech.net
Message-ID: <c27kpekmp1@xuxa.iecc.com>
Source record: 5869

While NBC did sell WKYC-AM about 1970, the FM station, which was sold at the same time, IIRC, did not become WMJI until 1981. Between WKYC-FM and WMJI was WWWM-FM "M105" in the early '70s. WWWM was operated by the same sports promoter who purchased WKYC-AM from NBC. The M in the station's new callsign was the first letter of the new owner's last name. WWWM-FM ran automated easy-listening music from 1972 until 1975 or so (during which they used an identification announcement "We've changed our name, but not our tune; we're WWWM, Cleveland"), then it went to live DJs and rock in '75. When the station was sold the second time, the callsign was changed to WMJI, and the format, under yet another new owner, was changed to oldies, as it is today (although the station has been accused by another AM oldies station here in Lake County, where I live, of not being a true "oldies" station by virtue of playing only music from the 1960s and '70s and having a so-called "oldies" library of only 300 recordings; this goes against WMJI's on-air announcement that it has "Cleveland's largest record library". The other station says it plays "every song you grew up with" as well.

I listen to WMJI quite a bit--I have and did for years, even when they were WKYC-FM and WWWM--and know for a fact they do have an extensive oldies library going back to the '50s. The AM station also does not cover the entire Greater Cleveland listening area by virtue of a 500-watt signal which is knocked down to 42 watts, directional, at night, whereas WMJI can be heard loud and clear, in stereo, from Ashtabula to the east to possibly beyond Cleveland's west side to the west, and to Akron to the south). I live about 35 miles northeast of Cleveland and can hear WMJI extremely well on every FM radio in my apartment, so the new owners may have improved the station's signal somewhat since its NBC days.

Would that have been Leonard Maltz of Malrite Communications? :) He also owned several other properties in Cleveland including WMMS and (later) WOIO-TV, and some radio stations in other cities (including, notably, Z-100 in New York).

Was a real shame when Malrite got out of the business. In particular, WMMS was sold to Nationwide, which later sold out to Jacor, which later sold out to Clear Channel, and has never been the same since. :(

Well, yeah, that's because a lot of what WMJI otherwise would be playing was on Mix 106.5 when they were playing "the best mix of the 80's, 90's and 70's". 'course, I can't see why some of the stuff on Mix couldn't also be played on Majic. But that's just me.

> I listen to WMJI quite a bit--I have and did for years, even when

May have? Probably did. Jacor and Clear Channel probably didn't have much trouble justifying investing in WMJI, which has been #1 in the ratings in Northeast Ohio for most of the last 15-20 years.

So Jeff, how's Fairport? I used to be your neighbor - lived in Mentor on the Lake until last July. (Lived in Painesville for a while, too.)

Take a look at this map:

http://www.radio-locator.com/cgi-bin/pat?call=WMJI&service=FM&status=L&hours=U

Again, as usual, Radio-Locator maps are for "entertainment purposes
only", but this is a reasonable approximation of WMJI's coverage area.
To the south...I'm in Akron, and WMJI is a local signal. Last time I
drove down 77, I think I started losing them a few miles south of
Canton, and they were shaky/non-listenable by the time I hit Dover/New
Philadelphia.

WMJI's tower, like most Cleveland FMs, is in Parma. It's a class B.

Amateur Radio Newslin(tm) Report 1385 – February 27, 2004

Amateur Radio Newsline report number 1385 with a release date of Friday, February 27, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Another proposal on restructuring and more on the fight against B-P-L highlight Amateur Radio Newsline report number 1385 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: A COUNTER PROPOSAL TO THE ARRL

Just as we all thought it was quieting down, restructuring of the United States Amateur Radio Service is front and center once again. This, as a small group that opposes the quantity over quality approach takes a massive counter proposal to the FCC. The group is headquarted in Florence, Alabama and Amateur Radio Newsline’s David Black, KB4KCH, is at our South-East Bureau in near-by Birmingham, with more:

--

Robin Gist, K4VU, listened to the ARRL’s plan to restructure amateur radio and didn't like it.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist and five other hams who make up a group called the Radio Amateur Foundation, drew up their own plans for restructuring ham radio. Their 59-pages of suggestions are now in the hands of the FCC. Gist calls the Foundation's petition a comprehensive plan for progressive and thoughtful restructuring. The group suggests taking the Technician class license, making a few changes, and turning it into amateur radio's entry level license. Gist is not pleased with the League's plans for the Technician license:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

The group suggests giving Technician class hams restricted HF privileges. And it strongly advocates keeping the code--5-word-per-minute Morse code proficiency would be maintained for General and Extra class licenses. Keeping Code, Gist says, is important to help amateurs provide emergency communications.

Under the foundation's proposal, the Novice and Advanced licenses would no longer exist. Current Novice and Advanced license holders would automatically be upgraded to the next category--a novice would become a Technician and an Advanced class ham would become an Extra.

Another big change comes in amateur radio testing under the Foundation's plans.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

The Foundation suggests not releasing question pool questions to the public.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist believes hams should have to wait at least 10 days before taking a failed amateur radio license test again.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist says amateur radio should be quality over quantity. A service of radio operators who have a sense of value and appreciation for amateur radio. That is what Gist says the Foundation's goals are really all about.

>From the Southeastern Bureau in Birmingham , Alabama, I'm David Black, KB4KCH, for The Amateur Radio Newsline.

--

While there are well over a dozen restructuring proposals already before the FCC only one has really gotten any major attention of the ham radio community. That’s the plan offered up by the A-R-R-L and referred to by Gist. As we go to air, no Rule Making designation has been assigned by the FCC to the Foundations regulatory change request. (QRZ.COM, ARNewsline(tm))

THE BPL FIGHT: WHAT HAMS CAN DO

Meantime, the story that refuses to go away has yet some new twists. Of coarse we are referring to the imminent introduction of Broadband Over Powerline Internet access, and the massive interference that ham radio operators believe it will create. Amateur Radio Newsline’s Mark Abramovicz, NT3V, is here with the latest:

--

Now that the FCC has released the Notice of Proposed Rulemaking in the Broadband Over Powerlines issue, it's time for amateurs to look it over, digest it and begin composing a well-reasoned letter or e-mail.

So says Jim Haynie W5JBP the American Radio League's president. Here are some things in the filing you might consider.

"Noise levels, potential interference both ingress and egress. Those are things that need to be addressed, " Haynie says. "Public relations: What's going to happen when you get on the air on 20 meters and you knock 10 of your neighbors off line all of sudden? They call the local power company, it's a public relations nightmare."

Haynie says once you decide to write that letter, keep in mind it has to be supported with facts.

"I don't see much water being drawn if somebody writes a letter and says, 'Well, this is good for this and it's good for that and it's going to interfere with my ham radio hobby and stuff.' I never, ever use the word hobby to anybody in the Washington. It's the Amateur Radio Service," Haynie says.

"And what you've got to do is use a little bit more fact, a little bit more of concrete-type evidence that you can conclude on your own. And that's pretty simple to do. It's got to be well-reasoned arguments. It can't be emotional argument."

And, once you've finished the letter or e-mail, Haynie says make a copy or print a copy of what you've prepared.

"Put it in an envelope with your QSL card and send it into your local representative at his district office, not in Washington but his district office," Haynie advises. "I'm just amazed how much power that letter has to your local congressman and your local senator when you mail it to one of his local district offices."

Haynie continues to express disappointment the FCC failed to wait for a report from the National Telecommunications Information Agency. The agency oversees radio spectrum use by government agencies and services, including the military. He says its technicians have been busy at BPL trial sites across the country.

"We know that they've done over 18,000 measurements over the last four months in the various (BPL) test areas," Haynie says. "We have gotten actually photographs of their trucks, we've seen them working hard at it. And that's what surprised me that the commission rolled this out before the information was made available.

"We were told by NTIA that it would be available the first part of this year. Now in government-speak, I don't know what that means. I know we got, the League's got petitions sitting up in the commission now since I took office as president in 2000. It is 2004 and they're still sittting on somebody's desk.

"So, FCC and NTIA, I'm sure, have their own timetables and they're not going to worry about what the ARRL or what some ham radio operators think about it. They're going to do their own work in the own way in their own time."

Haynie hopes the NTIA finishes its work soon and gets its report to the FCC pronto. He says it's clear BPL is targeted for special FCC attention.

"I think they'll put this on the fastest of fast tracks and get something going," Haynie says. "Typically, the window, the comment window will be 45-60 days. I'd be really surprised if they gave it 90 days.

"And, once that's done they start the wheels in motion and they'll (FCC) be under tremendous pressure from industry to get this thing out the door."

Haynie says the amateur radio service has allies in this fight and he's confident they will submit comments or speak to their congressmen or senators. Haynie says he's both cautious and optimistic about the outcome.

"I'm very concerned because I've seen the speed at which this thing has happened," Haynie says. "And I've seen the comments that the commission has made and I've seen the denials that the industry has made.

"And it just doesn't make sense. There's something more behind this. And I know people are going to say it's the almighty dollar. And that's true, it probably is. You're looking at millions and millions and millions of dollars of investment here.

"But there's something that just doesn't smell right, I guess, is what I'm trying to say. So, until I get a better handle and the League - our staff people get a better handle on where this is going and trust me we're on top of it every day - I'm just going to be to on the little plus side of a little cautious."

And finally, Haynie says to those who think the ARRL and other hams are overreacting like Chicken Little who cried out: The sky is falling! The sky is falling! He has these sobering thoughts.

"Just because we want, doesn't mean that we get our way. And I'm concerned about that," Haynie says. "And I'm concerned about another possibility that's probably the horror of all horrors.

"And that is if the (BPL) rollout is so big and you get tens of hundreds of thousands of people on, suddenly amateur radio relegates down to the same level as Part 15. That would be the most horrible thing that could happen to amateur radio."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

To read or download the Notice of Proposed Rulemaking from the FCC on Broadband over Powerlines, you can find it on the FCC's website: www-dot-fcc-dot gov. And, to learn more more about the ARRL's position, go to www.arrl.org. (ARNewsline(tm))

THE BPL FIGHT: A WIN IN 4X4-LAND

Even though the BPL outlook looks a bit grim here in the United States, there has been a big win over in Israel. Hagal International says that equipment for the networking of computers over the A C power mains being sold in the country was found to be causing interference to High Frequency spectrum users. As a result, Israel’s Ministry of Communications requested an explanation from the distributor of this equipment on how to remedy the problem. The distributor did one better. The company replied that it had discontinued the sales of the interfering devices. (Hagal International)

**

RADIO HONORS: W. VA GOVERNORS FATHER WA8AYP REMEMBERED

Here in West Virginia, Governor Bob Wise strolled into his reception hall last week to present a check to Kanawha County officials. Little did he know that those officials – and some amateur radio operators – had a very special surprise for him.

The money, fifty thousand dollars, was awarded to the county for the purchase of amateur radio equipment for the metro area’s new emergency operations center, and a new mobile command post.

As he usually does when speaking about amateur radio, Governor Wise began to reminisce about his father. He recalled hearing the sounds of CW from his father’s Hallicrafters receiver wafting into his bedroom at night. He even remembered his father’s amateur callsign, WA8AYP. At that moment, his attention was directed to a nearby FT-847 to receive a message.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

That’s control operator Bill Hunter, K8BS, telling the governor via amateur radio that his father’s callsign is now the club callsign of the Kanawha

County ARES/RACES group. The announcement was not only a complete surprise, the governor appeared clearly touched. After a moment, he quipped, “Hey, do I get a QSL card for this?” He was quickly presented with a specially designed QSL card. After the ceremony, the governor signed copies of those cards, and posed for pictures with the estimated 75 ham operators in attendance.

The surprise was the brainchild of Kanawha County Commission President Kent Carper, W8CHS, who appears to be one politician who can keep a secret.

Robert Wise, Senior became a silent key in 1986. He was active in emergency communications during the 1960’s and 70’s. (ARNewsline(tm))

**

RADIO HONORS: FCC NAMED TO RECEIVE NCAI LEADERSHIP AWARD

The FCC has been named by the National Congress of American Indians to be the 2004 recipient of it’s prestigious NCAI Leadership Award. The regulatory agency was selected based on its outstanding leadership and ongoing commitment and support to American Indians and Alaska Natives.

The National Congress of American Indians gives only three of these awards annually. One goes to Congress, one goes to the Administration, and one goes to another deserving entity. This year's recipients are House Natural Resources Committee Chairman Richard Pombo of California, the US Commission on Civil Rights, and the FCC. (FCC)

**

HAM RADIO TESTING: QPC WITHDRAWS A GENERAL TEST QUESTION

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has announced the withdrawal Question G5B11 from the Element 3 General class question pool. The QPC says that the question deleted asked what would be the RMS voltage if you combined two or more sine wave voltages?

According to QPC Chairman Scotty Newstadter, W4WW, the withdrawal refers to question G5B11 in the new, December 1, 2003, released General pool. It is not referring to the same numbered question in the pool that expires at midnight, June 30, 2004. (QPC, W4WW)

**

ENFORCEMENT: JACK GERRITSEN, EX-KG6IRO IN JAIL

Californian Jack Gerritsen, the ex-KG6IRO, will be spending time in jail, but not for his alleged interference to ham radio repeaters in the Los Angeles area.

On Monday, February 23rd, Federal Court Judge Carolyn Turchin sentenced Gerritsen to 30 days in jail and ordered him to pay a $2500 fine on a tresspassing charge. In passing sentence, judge Turchin explained that she could not place Gerritsen on formal probation as the U-S Attorney asked, because he was going to spend his entire sentence in jail with no time left for

probation. The Judge told Gerritsen that he has until May 15th to pay the fine or a lien will be placed on his home in the city of Bell.

Gerritsen’s alleged harassment of area repeaters had brought numerous letters to the court asking that it bar him from operating any sort of radio transmitter. In a statement to the court Judge Turchin noted that she had read many of the notes sent to her by the amateur community but that she would not be able to take them into consideration for this case. This was because the charges were brought because Gerritsen failed to obey a sign in the Courthouse and entered a door to the roof of the building.

Judge Turchin did say that she she would forward all the letters to the Federal Probation Department to be put in Gerritsen’s file. The ex-KG6IRO was then taken into custody by U.S. Marshals and escorted away. (ARNewsline(tm))

**
WITH THE ARRL: LEAGUE LOOKING FOR COMMENTS ON VHF+ CONTESTING

The ARRL is looking for input from VHF and UHF contesters to help improve the radiosporting events they take part in. According to a posting top the VHF Reflector by New England Division Director Tom Frenaye, K1KI, for the last year or so the League has been studying ways to increase interest and participation in VHF and above contests and awards. Now its ready to go further and it is inviting the ham community to take part. We have more in this report:

--

Tom Frenaye, K1KI, heads up the ARRL's VHF-UHF Contest and Awards Subcommittee. He says that changes to the contest rules and awards programs should be designed to do three things. First, to encourage more people to work more other people. Second, to bolster the number of QSO’s made over longer distances. And lastly, to encourage more people to just join in and participate.

Because of this, there are now some recommendations coming from those in the ARRL who have studied the situation. These incclude making changes in the QSO points and rover rules. Also under consideration is limiting the June VHF QSO Party to the bands from 50 to 1296 MHz only, expanding the Microwave contest based on 10 GHz Cumulative and dropping the current UHF contest. Added would be new contest categories in January, June and September.

Frenaye notes that these major recommendations, and a number of minor ones, are still just that -- recommendations. He says that the ARRL feels it is now very important to have further input from the VHF and above contest community before proceeding. He asks all contesters interested in these bands to take an in-depth look at the preoposed changes and then to respond. He hopes that a lot of you will.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, reporting.

--

You can e-mail your ideas and comments on or before March 7th to vhf-contest-proposal@arrl.org. (K1KI via VHF Reflector)

**

CW SAVVY: A MORSE CODE SYMBOL FOR THE "AT SIGN"

Computer fanatics who also like operating C-W listen up. Radio Currents Online for February 16th says that the International Morse Code is being updated to include a new character for the "at sign". In December, the International Telecommunications Union voted to create the character which will be known as a commat. The commat is made up of dot-dash for the letter A and dash-dot-dash-dot which we all know is the letter C. The two characters are combined with no space between them giving Morse code web surfers an easy way to send an e-mail address or the location of a webpage. (CGC)

**

CONVENTIONS AND HAPPENINGS: THE QCWA 2004 HAMVENTON DINNER

On the convention scene, word that the Quarter Century Wireless Association will hold its 2004 Hamvention Banquet at 7:30 p.m. on Friday, May 14th. Hosted by hosted by South West Ohio Chapter 9 the location this year is Alex's Continental Restaurant near the Dayton suburb of Miamisburg. Cost per person is $ 17.00 and advance reservations are required. Send requests and payment to Jerry Ragland, 409 Park Avenue, Franklin, Ohio, 45005. (QCWA)

**

ARRL SM ELECTIONS: THE RESULTS ARE IN

Turning to names in the news, word that Patrick Bunsold, WA6MHZ, has elected as the ARRL San Diego Section Manager in the only contested election this winter. Bunsold received 378 votes and his opponent, Stephen Early, AD6VI, garnered only 258 votes.

Election ballots were counted February 24 at ARRL Headquarters. Bunsold's two-year term of office begins on April 1st. All other Section Managers standing for re-election ran unopposed. (ARRL)

**

NAMES IN THE NEWS: THE OTHER SIDE OF THE CONTROL ROOM GLASS

And Amateur Radio Newsline President and Producer, Bill Pasternak, WA6ITF, is now the author of a new column dealing with ham radio operators working in the broadcasting profession appearing on the famed HalEisner.Com website.

Bill’s calls his commentary “The Other Side of the Control Room Glass.” It tells the stories of famous and no-so-famous people in the broadcast profession who share a common interest in Amateur Radio and the way in which being a ham has affected their careers.

The column began on Sunday, February 22nd with the first of a 4-part tribute to the late Roy Neal, K6DUE. This series will include a retrospective on Neal’s successful effort to put a manned Amateur Radio station into space.

“The Other Side of the Control Room Glass” becomes a monthly feature of the website in April. You can read it on-line at www.haleisner.com

HAMS HELPING HAMS: THE MIKE NEWBOLD, K0YO FUND

A fund to help 6 meter rover operator Mike Newbold, K0YO. It was set up by a group of hams who value Newbold's contributions by putting his life on-the-line to get rare grid squares on the air. And late last year it almost cost him his life. Bruce Tennant, K6PZW, has the rest of the story:

--

According to a posting on QRZ.com made for Phil Krichbaum, N0KE , Mike Newbold, K0YO, was vacationing in Baja Mexico just before Christmas 2003. He was savagely beaten with a pipe, robbed and left for dead. The same thugs also killed two Canadian surfers who were camping about 100 yards away from Newbold and threw their bodies and those of their dogs over a cliff.

Kirchbaum says that Newbold crawled 3 kilometers on his hands and knees through cactus and over rocks to a road where he had a better chance of being located. Some surfers from Los Angeles found him the next day. They took him to a medical facility and contacted the police. They then transported Newbold back to California for further medical treatment. Newbold then went back to Steamboat Springs, Colorado, where his son took him for additional medical care and then home for a Christmas eve dinner. Kirchbaum says he has since visited Newbold brought him a 2 meter F-M radio donated by Bob Ludtke, K9MWM. Thats where he learned that the value of items lost and stolen in Baja easily exceeds $10,000.

To help defray the cost of replacing Newbold's pick-up truck, camper and ham radio gear that he and Gary Yantis, W0TM have established he Mike Newbold Fund. If anyone would care to make a donation to help get Newbold back on the road to rare grids, please contact W0TM or N0KE. Their respective e-mail addresses are gyantis@midtec.com and pfkski@vail.net.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

You can read more about Mike Newbold, K0YO, and what happened to him on-line on line on the newspages at www.qrz.com (QRZ.COM)

**

HAM RADIO IN SPACE: SUCCESSFUL OHIO ISS CONTACT

Friday, February 20th was a great day for youngsters at Ohio's Glenwood Elementary School. That's when International Space Station Commander Mike Foale, KB5UAC successfully answered questions from a number of students. Better yet, Bill Chalkin, KA8VIT, in nearby South Euclid was listening and recording. Take a listen to a ham radio from space:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

In all, sixteen students got to question KB5UAC about life on-orbit. According to the AMSAT News Service preliminary reports indicate the space station side of the conversation was heard as far East as Boston and Baltimore. (AMSAT, ARNewsline(tm) with audio from KA8VIT)

**

INTERNATIONAL - WORLDWIDE: NO RECIPROCAL 5 MHZ OPERATIONS

Turning to international news, a reminder that holders of United Kingdom 5 MHz operating permits are reminded that CEPT international operating rules does not apply to 5 Mhz. The only countries currently allowing 5 MHz operation by individual stations are the United Kingdom and the United States. Only club stations are presently being allowed to use 5 MHz in Finland and operations by stations in Norway and New Zealand are for internal emergency communications purposes only. Stations in Canada may use 5 MHz frequencies at agreed specified times but activity from Germany is not currently permitted. (GB2RS)

**

ON THE AIR: FIELD DAY 2004 - JUNE 26-27

Turning to operating events, the ARRL Letter says that rules and entry packets for the 2004 running of ARRL Field Day now are available on the League's Website. The ARRL Letter notes that Field Day is always the fourth full weekend of June. This year it's June 26th and 27th with activity beginning at 1800 UTC Saturday and ends at 2100 UTC Sunday.

There are no rules changes from 2003. Participation in Field Day now is open to all amateurs within IARU Region 2. Field Day stations may contact stations in other regions for point credit, but stations outside Region 2 are not eligible to submit entries for this event.

More information is on-line at www.arrl.org (ARRL)

**

DX

In D-X, I2YSB, I2MOV, IK1AOD and IK2DIA, have been on the air from Tokelau signing slash ZK3. They now say that they plan to be active portable 5 W from

Samoa on all bands and modes between the 29th of February and 8th of March. Look for them on the usual D-X frequencies. (GB2RS)

Also, K4ISV and K4CN will be active slash VP5 from North Caicos Islands through the 17th of March. They will also participate in the CQ 160-Metre SSB contest as VP5B. QSL as directed on the air. (GB2RS)

And a Galapagos Islands "HC8/HD8 DX Diploma" is now being issued by the DX-TA-SEA DX Club. This multicolored certificate is awarded to Amateur Radio operators and short wave Listeners for confirming a minimum of 3 different HC8 or HD8 stations in the Galapagos Islands. All contacts or SWL reports made after November 20, 1945 are eligable. Submissions and information requests go to Dr. Rick Dorsch, NE8Z, P.O. BOX 616, Hamburg, Michigan 48139 -0616 (NE8Z)

‘**

RADIOSPORTS: HES OFF AND WALKING

He’s on the road again. We are talking about Tony Whitaker, G3RKL, who is off on his latest trek. Amateur Radio Newslie’s Jim Meachen, ZL2BHF, has the details:

--

His short walk has begun!:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

That’s the voice of Tony Whitaker, G3RKL, as he begins his pre-announced trek from Invercargill to Blenheim. What’s amazing is that recording comes to you from the other side of the world. From the United Kingdom, where it was recorded by Ian Abel, G3ZHI, in Yorkshire England. How? Through the magic of Internet linked repeaters that will allow the world of Amateur Radio to follow Tony’s almost every step of the way:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

During his stroll Whitaker will be on the air using the special callsign ZL6SHS. And -- you will literally find him operating everywhere including HF, VHF and UHF. And when access to an IRLP or Echolink equipped repeater is available, he just might pop up in your back yard, eager to say hello.

So, keep an ear open for Tony Whitaker, G3RKL, as ZL6SHS as he jauntily saunters the length of New Zealands South Island. He might be coming to an Internet linked repeater in your hometown and right to your H T.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

With thanks to Ian Abel, G3ZHI, for the audio of Tony’s first few minutes on the road, I’m Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand for the Amateur Radio Newsline.

--

With access to Echolink and IRLP now quite common you can expect to hear more from G3RKL here on Newsline in the coming weeks. (ARNewsline(tm) with audio supplied by G3ZHI)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up over two dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org and we will get back to you as fast as we can.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N8TMW, and I’m Jeff Clark, K8JAC, saying 73 and we thank you for listening."

Get Total Recorder from www.highcriteria.com for the princely sum of
$12. It'll even create your MP3 for you on-the-fly, ready for playing
on any MP3 player in any speed you can think of.

Total Recorder is like a proxy server for your sound card. Any
software that sends data to the soundcard can be easily ripped to a
file. It also works the other way. Audio sources plugged into your
soundcard, converted by the soundcard to wav are also ripped.

Because the soundcard must have unencrypted wav audio, there's no
hacking around it. I listen to my favorite BBC programmes in my car
on my Archos hard drive MP3 player, here. Works great!

UPgrades for life are free with your princely $12 subscription.
They'll email you when there's an upgrade. It does a lot of more
things since I first bought it....(c;

I heard IBOC on the almost de facto Kenwood car radio today in Chicago on all-music WIND. It sounded marvelous, with no noticeable artifacts and very nice resolution, clarity and feel on music. It is not FM, which I would expect as the FM preemphasis curve really colors the high-frequency content; in some senses the IBOC AM is nicer than processed FM.

588. DX tests Summary

Newsgroup: rec.radio.broadcasting
Date: 2004-03-05 15:44:47 UTC
From: ircamember@ircaonline.org
Message-ID: <c2a79fkbq1@xuxa.iecc.com>

For anyone interested, here's a reminder of upcoming DX tests; if anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least March (2004)".

Sunday, March 14, 2004 - KEVA-1240, Evanston, WY 1:00-2:00 am MST (3:00-4:00 am EST).

Sunday, March 14, 2004 - WNNR-970, Jacksonville, FL
WVOJ-1570,
Fernandina Beach, FL 12:00-1:00 am EST.
E-mail:wgsr1570@nrcdxas.org

Sunday, March 14, 2004 - WTOP-1500, Washington, DC 12:00-1:00 am EST.
WWW: http://www.wtopnews.com/

Monday, March 29, 2004 - WXHL-1550, Elkton, MD 12:01-1:00 am EST.
E-mail:d_oetting@hotmail.com
Phone:410-398-3883

Please remember, what's listed as being on, say, Monday *may* be what you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting
me know, and please, drop the station personnel a note, via e-mail or snail
mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

589. For sale: Partial ownersip of AM/FM in small Virginia town.

Newsgroup: rec.radio.broadcasting
Date: 2004-03-05 18:05:02 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c2afgesdo1@xuxa.iecc.com>
Source record: 5880

For sale:

(The "Radio Crazy" is baaaaaakkk!!)

Partial interest in AM/FM radio station in small
Virginia college town.

Total asking price is $400,000 (We are bidding
$375,000)including building, land and AM tower site.
FM tower site is leased at $400.00 per month.

Joint venture: Active or inactive investors with at
least $20,000 each are welcome. No individual can own
more than 49 percent of the stock. This rule also
applies to me!

AM is 1 KW, nondirectional, class "C" (local)fulltime.
FM is class "A". They are the only commercial stations
in that community.

There is only one other station in the county, another
AM/FM.

Tel: (478)741-1710 in Macon, GA.

I am NOT a broker, agent, shill, owner or part owner.

I am also NOT a crook!

References:

(a)(My parole officer)Mr. Larson E. Rapp. c/o
Zing-Zing prison, Ossinstink, NY 12345.

(b)(Trade reference)Brazilian Bandit Airways.
Purchased one-way ticket to Rio using cash. All small
unmarked bills. Will be leaving after we raise the
down payment!

(c)(Ham reference) Mr. Wayne Groin, W2NST, Rightwing,
NH. Former owner of "74" magazine!!

73,

Meyer Gottesman, W6GIV

IBOC may sound fine on a car radio in a high ambient noise
environment, but the question was about high end audio.

When you have audiophiles refusing to play CDs because they don't
sound as good as vinyl you're not going to find them pleased with IBOC
on either AM or FM.

I know audiophiles who have no audio source other than a turntable on
systems costing $20,000 or more.

The Emperor is a nudist.

Rich

I'd like to get back to Nettransport, hope you guys can help me.
Has anyone tried to use it with a proxy?
I tried to download through a
proxy . I added the proxy, but when
I tried to validate it with HTTP <Connect> it could not
connect to the www.microsoft.com. If I chose HTTP<Get>
it works ok. If I configure this proxy in the IE6.0 it
works perfectly ok. Also, if I try to download a file
configuring this proxy in Other Settings>Proxy>Single
Proxy it can not connect. If I use direct Connection,
everything works ok.
What am I doing wrong? How can I make it download
through a proxy?
Thanks in advance.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,
hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their
own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an
intelligent fashion, and show links between musical genres.

595. Re: What is the max power (dBm) a AM receiver can get in the real world?

Newsgroup: rec.radio.broadcasting
Date: 2004-03-06 17:45:51 UTC
From: Bob Haberkost <cbclistener-really!-@canada.com>
Message-ID: <c2d2offld1@xuxa.iecc.com>
Source record: 5885

Well, exactly...sortof. I don't think the question is what was the maximum that any "receiver" would take, as I also considered the various off-the-transmitter modulation monitors as the top end of that range. What he's clearly asking is how much RF any given receiver would be exposed to at close range. But how close? And with what antenna (what wavelength)? Series or parallel fed? Etc., etc.

The question needs many more parameters to get a hard answer, and that hard answer is of no significance since the scenario isn't a real-world question. And the final indication that this is a non-question is the reference to dBm...for dB, one needs an impedance of the load. AM receiving antennas do not conform to an impedance, unlike FM and other VHF and up sets that usually use either 300 or 75-ohm feeds. With those one can take field strengths and convert them to power....without a corresponding impedance, the AM question is undefined. And in the interest of the truth (even for a purposeless question) I wouldn't presume to assume to specify an answer which has no basis in reality. -- For direct replies, take out the contents between the hyphens. -Really!-

Is this to say, Rich, that IBOC sounds worse than what Sirius has? (Yeah, I installed one in the car a while ago, although I haven't had a lot of time to listen because not soon after I've had a series of long-term mechanics needs.) I've noticed that Sirius uses different codecs rates for their streams...the voice-based streams are particularly low-fi, with artifacts that I can hear pretty easily. The music-based streams obviously use a higher-quality codecs, although even then I can still hear artifacts similar to what Windows Media Player will exhibit on even high-rate streams.

Yes, I'm a "golden-eared bastard", as I can still hear the difference between vinyl and CD recordings. For the same reasons, I won't use an iPod or similar MP3 device because I can't stand the fidelity loss (and needless to say, that means that downloading music is not an option...free or otherwise, it's not worth the price)...but seeing as you've said you have a Sirius receiver yourself, where would you put IBOC (AM and FM versions) with the Sirius streams? In any event, I suspect that I'd be similarly underwhelmed with either IBOC service (I'm just barely satisfied with the Canadian DRB solution, although in fairness, it does sound better than the associated analog services, at least). -- For direct replies, take out the contents between the hyphens. -Really!-

>to say, that means that downloading music is not an option...free or
>otherwise, it's not worth the price)...but seeing as you've said you have a
>Sirius receiver yourself, where would you put IBOC (AM and FM versions) with
>the Sirius streams? In any event, I suspect that I'd be similarly
>underwhelmed with either IBOC service (I'm just barely satisfied with the
>Canadian DRB solution, although in fairness, it does sound better than the
>associated analog services, at least).

I can hear the difference between CDs and vinyl. In a perfect world
I'd chose vinyl. However, the surface noice and scratches drive me
nuts. Maybe it's because I spent time depopping music tapes for
syndication and It brings back nightmares.

The IBOC I've heard annoys me. I can listen for a short time, then
have to turn it off. It's fatiguing. MP3. Forget it. If I listen to it
it's usually with headsets and I hear artifacts that take the pleasure
out of the music for me, even at high sample rates.

I have both Sirius and XM. I agree that the quality depends on the
streams. Classical and Jazz seem to be the highest quality. For analog
I listen to WFCR, Amherst, MA. It's NPR, Classical and Jazz. Very
lightly processed.

My preference is CD, then Satellite, Analog FM when done right, good
analog AM, MP3 (high rates), FM IBOC and AM IBOC. In fairness, IBOC is
still a work in progress and may sound acceptable a few years from
now. Then there's the interference issue that might wipe out
broadcasting entirely.

We're not spending much time caring about quality. Digital audio
systems should have improved things. It makes broadcasting easier but
with the compression used in almost all systems to save disk space we
won't be hearing improvements that will satisfy audiophiles. When it's
well recorded DVD-Audio pleases me the most.

Can this "Total Recorder" truly Rip? That is, does it intercept the digital
data going to the sound card?

Actually, it was a car radio in an office. Since there are no availble
tuners, one makes do..
> When you have audiophiles refusing to play CDs because they don't
> sound as good as vinyl you're not going to find them pleased with IBOC

That I agree with. I refused to use CDs for my M�sica en Flor service in the
80's, even when many things were reissued in Japan on that medium; the cuts
did not sound right mixed with mostly-vinyl origin material. So I could
definitely understand a purist.

I don't find most conusmers to fall in that definition. Most will see the
"digital" label and _know_ it must be better.

>analysis on their hearing.....(c;

It had better be a quiet psych ward. An analysis would be futile when you're dealing with people who believe they need power cables that are $400 a foot because they make the system sound better.

If you want real proof, look at the back advertising section of Stereophile magazine and see what's being sold, how much it costs and what it claims to do. I have an audiophile friend who falls for all of it. 20 watt mono tube power amps at $20,000 each. I'll bet his system cost him $100,000 or more and it only has an incredibly expensive turntable as a source. There isn't a CD within eyeshot.

IBOC will be perfect for those who are content with 64kbps MP3s and have no live music frame of reference. Look at what the manufacturers did to AM sections of their radios. I don't think that's where good quality is going to come from.

The best test is with a very high quality pair of headsets where you'll hear every artifact up close. I can't even listen to C-Quam because of the gyrating stereo image. It causes motion sickness standing still.

Amateur Radio Newsline(tm) Report 1386 • March 5, 2004

The following is an advisory. Ladies and gentlemen, with a list of thank-you's for supporting us, heres our Treasurer and Support Fund Administrator Andy Jarema, N6TCQ:

--

Still playing "catch-up" for our supporters, in the month of June last year we heard from:

Monthly contributor Benton Bonney, W4PE of Orlando; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; mnthly contributor Frank Hemko of Harrods Creek KY; te Hualapai (Walla-pie) ARC of Kingman, AZ; monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and an "Aloha" from Corky Kirk, Jr., W6ORS of Hilo, HI.

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast. I'm Andy Jarema, N6TCQ.

--

Thank you Andy. And now, Amateur Radio Newsline report number 1386 with a release date of Friday, March 5th, 2004 follows in 5-4-3-2-1.

The following is a Q-S-T.

Help from down-under in the fight to save Amsat Oscar 40 and lots more on the fight to stop B-P-L. Find out the details on Amateur Radio Newsline report number 1386 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: HELP FROM DOWN-UNDER IN REVIVING AO-40

The AMSAT Oscar 40 ham radio satellite is still missing in action, but more international help in bringing it back to life is coming almost every day. The latest is from down-under as Brett Dawson, VK2CBD and the team of Australia's Parkes Observatory lend their support to AMSAT Germany in the recovery effort. Q-News Trevor

Teague, VK4BAT, reports:

A 4 MHz wide spectrum with centre frequency of 1097 MHz was scanned with high level technique in order to find the LO frequency of the AO-40 L1 receiver. The fact that nothing was heard of the L1 receiver's LO does not lead to the conclusion that AO-40 is completely dead. The receivers of Parkes are not really fitted for frequencies below 1.25 GHz, and naturally one does not know how good the L1 receiver's LO is shielded or how much of the signal would go through the antenna to the outside world.

As previously reported, the main battery pack that powers AO 40 is believed to have short circuited keeping the auxiliary battery from powering the bird. As this newscast goes to air the rescue effort continuing. (Q-News)

ENFORCEMENT: FCC SEEKING INFORMATION ON ALLEGED FELON HAMS

Back here in the United States, our FCC wants to know if several people on a list it has are felons convicted of an array of very serious crimes. The agency's Daryl Duckworth, N-N-Zero-W, explains:

--

Duckworth: Seven inquiry letters were sent to individuals thought to be licensees who are incarcerated on felony convictions listed on sex offender registration lists or (who) recently served prison sentences for felony convictions. In these cases, the names match our license records and preliminary information is that the subject is the same person listed in our database.

These inquiries seek first to establish whether that is the case, and, second, to determine what affect the offense has on the qualifications to retain a Commission license.

This has been Daryl Duckworth, NN0W, reporting.

--

The FCC did not provide names but it did give conviction information and the locations and offenses. The list includes hams believed to have been convicted of offenses ranging from sexual abuse to child molestation and even murder. (FCC, RAIN)

**

RADIO LAW: JUDGE ORDERS TECHNICAL TESTIMONY IN ALLEGED JAMMING CASE

A Wisconsin federal judge has refused to close the courtroom for testimony by employees of Motorola during the trial of a defendant who allegedly tried to jam police and fire communications. on several occasions last year. In denying Motorola's motion, Judge John Shabaz said on February 27th that the right of Rajib Mitra to a fair trial outweighs Motorola's right to protect its trade secrets.

According to the Madison Capital Times, attorneys for Motorola had argued national and local security concerns as reasons that it did not want public disclosure on how its radio equipment was allegedly jammed by Mitra. The government planed to call five Motorola employees to explain how its Smartnet II radio equipment can be disrupted. Motorola claimed this not only exposed its trade secrets but also placed at risk the lives of law enforcement officers that depend on the proper functioning of their radio communications systems.

But assistant U.S. Attorney Tim O'Shea opposed Motorola's motion, as did Mitra's attorney. Christopher Van Wagner argued that removing the public during his client's testimony would prejudice the defendant. Judge Shabaz agreed with the prosecution and defense. He overruled the Motorola request and ordered the employees to testify noting that no one in the public is coming to his court to find the formula to jam radio frequencies. He noted that this kind of technical testimony can be removed from trial transcripts when they are produced.

Mitra's trial was to began on Monday, March 1st. He faces two charges of using a computer to interfere with police communications. If convicted on both counts he faces up to 20 years in prison. (Capital Times)

**

RESCUE RADIO: EMERGENCY COMM GENERATOR STOLEN

I'm Bill Pasternak, WA6ITF, with a late breaking story. Dateline San Antonio, Texas where, last Saturday night, February 29th, the San Antonio Radio Club had one of its trailer and generator systems stolen.

Paul Guido, N5IUT, reports over the Public Relations remailer that it was a 12.5 Kilowatt Onan unit. The club's biggest and best generator.

A police report has been filed that includes some very good pictures of the trailer with the generator on it. If you have any information on its where-abouts, please contact Paul by e-mail to Pguido2003a@broadwaybank.com or call the San Antonio police.

The San Antonio Radio Club has been a Bexar County, Texas, emergency communication resource since way back in 1919. (N5IUT)

THE BPL FIGHT: THE 11 METER CB ANGLE

Over the past several months we have been hearing about the potential interference to Amateur Radio that's expected if the FCC proceeds with the rollout of Broadband over Powerline Internet access. But ham radio is not the only service in the 2 through 80 MHz spectrum where B-P-L will operate. Shortwave broadcasters are concerned that their audiences will disappear if they cannot be heard over B-P-L generated noise. Also, a number of emergency communications networks have told the FCC that their vital communications will negatively impacted as well.

The one service that nobody has talked about is 11 meter Class D CB radio. An unlicensed service at 27 MHz with millions of radios crammed into 40 overcrowded channels with many operators running far more power than legally allowed. This week, Amateur Radio Newsline's Mark Abramowicz, NT3V, looks at CB, B-P-L and the collision between the two that may not be to far away.

--

If those who want to bring us Broadband Over Powerline thought amateur radio operators were going to be a nuisance to their plans, they may have an even bigger headache on the horizon. Citizens Band radio operators could prove to be the biggest threat to B-P-L.

The FCC defines CB as a private radio service that doesn't require users to have a license. It hasn't for years. The FCC pretty much gave up regulating the spectrum. It asks users to enjoy their radios but to stay within the five-watt power limit of most of the radios.

But since the FCC gave up trying to keep track of those operating on 27 Mhz, problems have mushroomed. A class of CB operator has emerged who likes to use high-power amplifiers to talk with people several states away.

How powerful? If you check out some of the CB websites, you'll find amplifiers being sold that push the envelope well beyond the legal limit - say 500 watts, 1,000 watts, even 5,000 watts and higher.

Many contemporary electronic appliances, because of poor RF shielding, are susceptible to interference caused by overmodulated CB signals.

The FCC could find itself in a real quandry if the B-P-L industry demands help in going after those who push the limit and disrupt

their systems. Imagine the complaints.

Because the FCC can't go to a database to help it find abusers or offenders, it's going to be a difficult if not impossible - task to track these illegal operators.

Will the industry end up funding the FCC's enforcement effort? That would be unprecedented.

Let's be clear: Not all CB operators are outlaws.

Many use their 11 meter radios for personal communications on trips, on hikes, on fishing expeditions. And, yes, the truckers are still big users of the spectrum.

But if you search the worldwide web, you will find CB sites with postings from folks who boast of their radio exploits and their amplifiers and contests.

The websites, of course, take no responsibility for the information or material posted in forums or message boards. They describe them as strictly for entertainment or educational purposes.

Some education the B-P-L industry is sure to get; perhaps a crash or will that be clash course in CB radio.

For now, we'll have to watch and wait.

CBers say they're watching, too. And some of them are vowing no one will stop them from operating as they please.

Stay tuned. For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

To get an idea as to the power that some of the highly illegal competition grade C-B stations run, take your web browser to www.bigradios.com and follow the numerous links from there. (ARNewsline(tm))

**

THE BPL FIGHT: CINCINNATI WATCH OUT

Meantime, Cincinnati Ohio may be among the first to have Broadband over Powerlines across the entire area. This, as a division of Cinergy Corporation announces plans to offer high-speed Internet service over its power lines.

According a March 2nd release, Cinergy Broadband is pairing with the Maryland based Current Communications Group to offer the service in parts of Cincinnati this year. Plans also call for an expansion into Kentucky and Indiana as the regional system grows.

Cinergy says that it hopes to initially market the service to 55,000 of its 1.5 million customers. A second venture will bring the technology to smaller municipal and cooperatively owned power companies, covering 24 million customers across the United States. The companies are committing more than $70 million to the effort. (ZD Net via Media Network)

**

ENFORCEMENT: CONGRESSIONAL SUBCOMMITTEE RECOMMENDS HIGHER FINES FOR INDECENCY

A congressional subcommittee has acted to substantially increase the fines assessed broadcasters who break indecency rules. Some legislators also say that repeat offenders should lose their licenses.

FCC officials have maintained for years that the current maximum fine of $27,500 is too small to serve as a deterrent for large broadcasters who view the fines as a cost of doing business. Now, under a bill recently passed by the House Internet and Telecommunications subcommittee, monetary forfeitures issued by the FCC would be increased by a factor of ten to $275,000 per violation. The cap on the fines would go to a maximum of $3 million.

There is yet another possibility being floated among legislators and one that could come up when and if the bill hits the House floor. That would be to hold performers and others appearing in the electronic media directly responsible for their own words, much the same way as is done in other radio services including ham radio.

But one law maker has cautioned to enlarge the scope of the proposed legislation to far. Representative Fred Upton cautioned that lawmakers should be careful not to expand the bill to the point where it might run afoul of free-speech rights guaranteed by the Constitution. If that happens, Upton says that it could very well buckle under its own weight. (Published news reports)

**

RADIO LAW: FCC SAYS IT TIME FOR LOW POWER BROADCAST RADIO

The FCC says that Congress should lift the restrictions it has placed on the introduction of low power FM broadcast stations. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with the rest of the story:

--

In a February 20th statement, the FCC said that its inquiry shows that low power FM stations serving highly specific audiences in small areas do not interfere with the operations of large broadcasters. Also, that they will not keep audiences from hearing the higher power commercial stations as the industry claims.

When the FCC first suggested creating the low power or community radio option. commercial broadcasters and public radio stations complained. The argued that low power stations would interfere with reception of their signals Congress responded by setting what amounted to an R-F no-man's land between the low power stations and existing broadcasters. This severely limited the number of tiny stations that the Commission could license.

Lawmakers also told the FCC to study the potential for interference. The agency spent several years doing just that. It has now concluded that stations running between 10 and 100 watts pose little risk to commercial stations whose power levels can be upward of 100,000 watts effective radiated.

Currently, there are about 300 low powered F-M stations on the air. Most are licensed to churches, school districts, youth organizations, highway departments, environmentalists and the like. By comparison, the nation's largest commercial broadcast radio chain, Clear Channel Communications owns 1,200 stations so far.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A spokesman for the National Association of Broadcasters termed the FCC report as flawed. (FCC)

**

ON THE AIR: WYOMING STATION DX TEST MARCH 14

Meantime, a full power radio station is in the news and its a good news for hams and S-W-L's who like listening for rare ones on the A-M band. On Sunday, March 14th, radio station KEVA, 1240 kilohertz in Evanston, Wyoming will conduct a D-X test to find out how far its signal can be heard.

According to Lynn Holman reporting over the Broadcast Employees remailer, the test will take place from 12:00 - 1 a.m. Mountain Standard Time and will consist of numerous Morse code I-D's emanating from a C-D created by Doug Smith, W9WI.

For a conformation card please send your reception reports with return postage to Michael Richard, KEVA-AM, P.O. Box 190, Evanston, Wyoming. The zipcode is 82931. (B.E.A.N.)

**

CONFERENCES: EASTERN VHF-UHF IN CT. IN APRIL

Turning to ham radio meetings of note, the 30th annual Eastern VHF UHF Conference will take place next month, April 16th through the 18th at the Radisson Hotel in Enfield Connecticut. Among the program to be presented will be a special update on the "Status of

VHF UHF Contesting & Awards Programs" will be Dan Henderson, N1ND of the ARRL. Also on hand will be Gerry Rodski, K3MKZ of SSB Electronic USA to manage the Preamp Noise Figure Measurement workshop and Chris Fagas, WB2VVV to oversee the antenna gain measurement range.

The conference is sponsored by the Eastern VHF UHF Society and the North East Weak Signal Groups. More information is available from Conference Chairman and Proceedings Editor Bruce Wood, N2LIV. E-mail him bdwood@erols.com or visit http://newsvhf.com on the World-Wide-Web. (VHF Reflector)

**

CONFRENCES: SVHFS IN GEORGIA IN APRIL

And the 8th Annual Southeastern VHF Society Conference takes place in Marietta, Georgia on April 23 and 24th. Marietta is not far from, Atlanta and this years program highlights include sessions on pre-amp noise figure and gain measurement, antenna gain measurements, a back scratcher antenna competition and judging for the Mini-Circuits Annual Award for Design Achievement. Also expect a flea market, manufacturer exhibits, the annual auction, and card checking for VUCC. For more information on this one please take your web browser to www.svhfs.org (VHF Reflector)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: BAND LEADER ALVINO REY, W6UK - S.K.

Ham radio's changing of the guard continues. This with the sad news that Alvino Rey, W-6-U-K, has passed away.

Ray was 95 when he became a Silent Key from pneumonia in Sandy, Utah on Tuesday, February 24th. Best known as a swing-band leader of the '30s and '40s he was also an inventor and tinkerer who pioneered development of the pedal steel guitar. This instrument, and his ability to make it sound like it was talking became his musical trademark.

Born Alvin McBurney, in California he grew up in Cleveland Ohio. After beginning his music career in New York he changed his name to Rey in 1929 to capitalize on the then popular Latin music craze.

Rey and his orchestra gained national fame with the 1942 hit, "Deep in the Heart of Texas." Nearly 25 years later, Rey was again in the national spotlight when he was featured for several seasons on ABC Television's "The King Family Show."

Ham radio wise, Ray loved to operate all modes, and, according to posts on the V-H-F reflector, was particularly fond of 6 meters. He was also active on all of the the high frequency bands over his many years in the hobby. (K6LAE, published news reports)

**

WORLDBEAT - USA: BIG ANTI-PIRACY WIN

A federal judge in San Francisco has ruled that a software program that copies Digital Video Discs infringes on the copyrights of Hollywood studios. Judge Susan Illston ruled that software made by 321 Studios of Chesterfield, Missouri violates the 1998 Digital Millennium Copyright Act. This law prohibits the circumvention of anti-piracy measures such as the Content Scramble System protecting movies on DVDs. Judge Illston ordered the company to stop making or distributing such software within seven days of her February 20th order. (News reports)

**

WORLDBEAT - BELGIUM: HACKER GAL ARRESTED

Meantime, a Belgian computer hacker who has made an international name for herself as a woman in a male-dominated activity is facing criminal charges. Belgian police have arrested the 19-year-old technology student, confiscated her five computers and shut down her Web site.

A Belgian newspaper says that the woman, identified only by her nickname, Gigabyte was charged with computer data sabotage. Police tell the paper she was preparing to publish new viruses on her Website when she was taken into custody. If convicted, Gigabyte faces up to three years in prison and 127-thousand dollars in fines. (Computing)

**

WORLDBEAT - UK: IOTA IN OCTOBER

And while its a long ways off, the dates of the Radio Society of Great Britain's International High Frequency and Islands on the Air Convention has just been announced. This year, the gathering will take place the weekend of Friday October 22nd to Sunday the 24th. Further announcements as to venue and the program will follow later on www.rsgb.org and the GB2RS news service from the U-K. (RSGB)

**

NEW HAM PRODUCTS: THE JWM 1152 PHASE LOCKED OSCILLATOR

Looking at products of interest to ham radio experimenters, word that JWM Engineering Group has announced availability of a new phase locked oscillator. One designed to improve frequency control to microwave receivers and transmitters using crystal oscillator local oscillator chains.

According to Jerry Mulchin, N7EME, President of the JWM Engineering Group, the Model 1152 eliminates the frequency uncertainty of most microwave transverter systems. Mulchin adds that Precise frequency control and stability eliminates at least one variable in establishing successful and enjoyable microwave communications. More information is on the web at http://jwmeng.com. (JWM Engineering Group)

**

CONTESTS: WB6ACU AND K9EID ON FROM W1AW

On the radiosport page, the ARRL phone contest on March 6th and 7th will have had some well known hams operating from the League's W1AW flagship station this year. According to a note from Bob Heil, K9EID, he and famed rock guitarist Joe Walsh, WB6ACU of the Eagles will be on the air from League headquarters during contest. A special picture QSL will be sent to those who work Joe or Bob. QSL to their respective call directory addresses. (K9EID)

**

DX

In DX, PA5M has been active as 9U5M from Burundi since the 17th of February and will stay in the country until the 17th of March. He operates in his spare time, typically after 1600 UTC, on 10 to 40 meters CW and SSB.

And W7EJ is in Morocco until the end of March. He plans to be active as CN2R in the CQ 160-Meter SSB, ARRL DX SSB and CQ WPX SSB contests.

Also, DJ4SO is active portable V-51 from Namibia through the 15th. He plans to operate on 160 to 6 meters mainly CW, RTTY and PSK 31 with some SSB.

Lastly, ZS6Y reports he is active with the special callsign ZS10RSA until mid-May. This, to celebrate 10 years of democracy in that nation. For all of these operations, QSL as directed on the air.

(This weeks DX news courtesy of GB2RS)

**

THAT FINAL ITEM: THE ORIGIN OF ELECTRONIC SPAM

And finally this week, a brief lesson on something we dread every time we check our e-mail. You know what it is. Unwanted junk e-mail

that people have come to call Spam. Ever wonder why? Here's Bill Pasternak, WA6ITF, with some details that probably very few people know:

--

We all know that Spam is the trade name of a canned meat product. At least I suspect that most of you do. But have you ever wondered where the phrase "spam" in relation to unsolicited junk e-mail came from. Well, blame it on the computer nerds who were fans of one of the worlds greatest comedy ensembles.

It seems that the term began being applied to junk electronic mail in the early 1990's by computer geeks. It was based on a 1970 Monty Python skit in which an exasperated restaurant customer is urged to order the meat until she screams: ''Stop it already. I don't want any Spam!''

And that was it. And now you do know the rest of the story.

For the Amateur Radio Newsline. I'm Bill Pasternak, WA6ITF, in the City of Angels.

--

To which Ill add the rhetorical question: How many of us open our e-mail boxes each day and want yell the same thing? (Tnx to Q-News, CGC, others who sent this item along.)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

602. for sale: Low cost radio broadcasting software

Newsgroup: rec.radio.broadcasting
Date: 2004-03-07 16:47:21 UTC
From: Ross Levis <ross@stationplaylist-dot.com>
Message-ID: <c2fjmppva1@xuxa.iecc.com>
Source record: 5891

StationPlaylist.com is pleased to announce new releases of our low cost radio software
designed for the small to medium sized broadcaster. It is very popular for community, LPFM and internet streaming stations. Two products are available.

StationPlaylist Creator is a music/spot scheduler for generating playlists (logs). A user-definable playlist format provides compatibility with most audio players, from Winamp through to professional broadcast playout systems, including our own StationPlaylist Studio.

Additional software is included to integrate with the Winamp audio player for a very low-budget automation solution.

Playlists are based on hourly rotations of music categories and spots which may be scheduled for any hour of any day.

Other features include:
* Song & artist repeat protection. Prevents the same song, or songs by the same artist from repeating within a specified interval.
* Generate a personalized interactive HTML playlist for staff or listeners to view upcoming playlists.
* No maintenance of song details required. This is a big time saver when adding new tracks.
* A sophisticated Playlist Editor to view, edit & print the generated playlist, including search, replace, insert and delete features. Drag & drop supported.
* Voice tracking. Record and insert voice tracks in the playlist. This helps your station sound live during automation.
* Automatic song intros/outros. Pre-recorded song introductions can be included along with selected songs. This can help your station sound live without voice tracking.
* Generate Track Summaries for royalty payments, and Spot Summaries for advertisement billing.
* Standard edition US$79, Pro edition US$169

StationPlaylist Studio is our digital audio on-air broadcast playback software for the Studio/DJ. Features include:
* Automation and Live Assist mode.
* Continuous 24/7 play in automation mode.
* Microphone control with music fade.
* Manual & automatic Line-In control for external feeds (satellite etc).
* Supports playing MP3 & OGG Internet streams for news feeds etc.
* Play spots or events at specific times.
* Generate a "Playing Now" HTML web page or text file and optionally upload to a FTP server.

* 48 cart slots for instant jingles/sound effects etc.
* 12 personalised carts per user/announcer login.
* Password protection for changing options.
* Insert, delete & move tracks in the live playlist.
* Drag & drop tracks from Windows Explorer.
* Insert tracks by searching a portion of the artist and/or title.
* Automatic time-of-day announcement support (audio files not provided).
* Auto-start in automated mode after power failure.
* Detailed logging for royalty payments & advertisement billing.
* Single keystrokes for Start, Stop, Mic and more.
* Uses the powerful & robust Winamp audio engine.
* Advanced automatic crossfading using 1 soundcard.
* Track Preview available on a second soundcard.
* Internet stream encoding via free DSP plugins.
* Free sound processing/audio compressors/limiters available.
* Supports MP3,MP2,OGG Vorbis,WMA,WAV,AIFF & CDA audio file formats.
* No song database to maintain.
* Works best with StationPlaylist Creator music scheduler.
* Schedule new playlists to be created automatically (with Creator).
* May run unattended in automation mode indefinitely (with Creator).
* Only US$89

And how does NPR get to them? Isn't there a little bird up there chirping
digits to all the NPR affiliates?

I presume they do their music locally from CDs - but haven't the CDs been
compressed onto some automation system's hard disk...?

I love the Coast To Coast show with Art Bell, but I get a lot of signal drifting at night listening in Brooklyn. It's fine on the weekends where it comes in on WABC, but during the week the signal is very weak on 1110 AM. Would a longer range radio like the GE 7-2887 Superadio III help, which has station selectivity and sensitivity, or is a digital radio better where I can preset the channel. Would that help lock it in, and adjust for drift?

Looking on their website I see it also comes in on WGY on 810 from Albany, but I haven't been able to access that station. It's listed at 50KW which is the same
as WABC, so I assume it's a stronger channel. KW's is stronger that W's?

Can anyone in the NYC area help with this? What channel do you pick it up on during the week? Please also e-mail if kind enough to respond. Thanks!

There are two kinds of codecs....destructive and (you might figure) non-destructive.

..WAV files are encoded with a non-destructive codecs...basically a 1-for-1 ratio of bits to the waveform's voltage at the instant of sampling. The digital encoding for NPR is, at most, companded, but this, like Dolby, can be undone....thus, non-destructive encoding.

MP3s and methods like IBOC or, from what I've heard, Canadian DAB radio, have encoding artifacts due to the effort used to eliminate redundant (and I guess the use of that word is a judgement call, considering what IBOC concludes is redundant) leave out too much, and thus when the encoded audio is reconstituted, it's missing stuff. Sortof like freeze-dried ice cream.

And from what I know about the one production audio system, Dalet, this implementation uses .wav files for storage. So it's about as good as the source, and thus quite suitable for air. Even these jukeboxes you speak of use a codecs which result in larger files than MP3s at the same sample rate, but the audio's quite unaffected by the process. MP3s and other internet and broadcast streaming methods need to cut down the data rate to levels that can't possibly allow true high fidelity or even a facsimile of it.

I'll continue the spirit of topposting...

When NPR went on the birds I think they were using EBU compression. That is essentially a floating-point encoding of the waveform with 10 or 11 bits of precision sent in one millisecond blocks with a scale factor [exponent] for each block. There were 31 kilosamples per second??? Didn't NPR change to a method - unknown to me - which claimed a much lower the bit rate? I'd think that EBU, with its low sampling rate and only 10-bit encoding, would have real artifacts. This is certainly destructive encoding since you can only approximately recreate the input, more nearly so than MP3, I'll grant.

One Dalet system I know of uses MPEG 2 encoding with a 256 (?) kilobit per second rate.

I don't live in the NYC area, but I have been there enough times to know what I can get on the radio there. Yes, WGY (810 KHz AM) is 50 KW, but you will have trouble from adjacent channel interference from WNYC-AM (820 KHz). A GE Superadio may help because you can rotate the radio and, maybe, null out the signal from WNYC. The station on 1110 KHz is in Charlotte, NC. That signal is subject from interference from Canadian stations on that same frequency. Here again, a GE Superadio may help in the same manner. Drift used to be a big problem with tube type radios. It is still present on solid state radios, but minimal. What you may be experiencing is signal fade. This is an unfortunate part of nighttime long distance reception.

Early CDs were terrible. The masters were equalized with vinyl in mind
and would shatter coffee mugs.

>Most will see the "digital" label and _know_ it must be better.

That's why much of this discussion is really irrelevant. IBOC doesn't
have to be good. The majority of the market will be satisfied with
quality not much higher than MP3 at 64 kbps.

I was asked about the quality difference between XM's talk channels
vs. the music channels. I tuned in to the new traffic and weather
channels. The quality was awful, both technically and programatically.
It sounded (on every traffic channel) like the studio was a tiled
bathroom with awesomely bad artifacts. The announcers were among the
worst I've ever heard. This is clearly being done on the cheap with
kids who can barely read. Hide the expensive glassware until their
voices change.

I was extremely disappointed with what I heard. I think I'll keep my
AM/FM radio for when I travel between Boston, New York and Washington.
WINS, WCBS, WBZ and WTOP have nothing to fear. It's strange that
they're starting in major markets with small market talent.

Yes. I recall saying that in my original message. I like both the
Sirius and XM Jazz channels. The rock stuff has been so heavily
processed on the CD that it's hard to say where the low quality is
introduced. I can't blame either satellite service for that.

Personally, I've given up hope for improved audio quality from any
source. The market doesn't demand it.

Rich

Either the GE Superradio of the CC Crane CCRadio Plus with the Crane
Active AM antenna might help. WGY is going to be a problem (WABC and
WGY are the same power) because you have WNYC-AM at 820. Your radio
would to be very selective to pick up WGY without splatter from WNYC
even though it's only 1KW at that time of the night.

Rich

How much do you want to spend?

I'd go digital with synch detection and selectable sideband, a Sony 7600GR, about $150 at J&R; and a MW loop antenna next to it (Terk MW loop $40 or Select-a-tenna $60). The latter loops work wonders on any AM radio so are worth getting in any case for daytime reception. Perhaps at night they're superfluous though, because the problem at night is too many strong signals, not fishing out weak ones.

The audio from the speaker isn't anything to rejoice in, but you can get used to it easily; however the elimination of adjacent channel splatter and fading distortion can't be replaced.

And it has shortwave as a bonus.

If you spend more you can get better synch detection, but this gets you what you probably need. I don't know of a cheaper way to get synch detection.

There are several antennas that couple inductively (without a wired
connection) to receivers like the GE (my choice on price:value ratio) or
Crane and which allow nulling locals or semi-locals to get distant stations.
A visit to rec.radio.shortwave (where AM distant reception is also
discussed) will produce a number of helpful responses... and a hungry troll
or two, as well.

Depending how badly one wants to hear shows, there is also the chance of
moving into a communications receiver like the ICOM R-75 ($500 range) and
its ilk; an antenna like the Kiwa (discontinued, but available on e-bay) or
others is advisable.

The advantage is that such a receiver adds shortwave, an entertaining albeit
anachronistic, feature.

Topposting works for me, and no doubt the fairly significant number of readers who use the google interface, with that fairly annoying habit of putting the end of any excessively-long message behind the preview when viewing the thread. I know, I know...that's not what newsgroup ettiquette demands, but times change, eh?

But anyway, my point....I'll defer to you on your familiarity with Dalet....I've only ever seen one work (within the confines of the CBC) and as theirs is (was?) one of the first implementations, it may use .wav files, maybe even now. The thing sits on an Oracle database, I'm told, so frankly there's no requirement that it be one codecs or another. Seems to me that MPEG2 would be more economical, certainly. Next time I'm there, I'll ask a bit more about it. Bottom line, though, is that there's a balance between the size of the data and the quality of the encode. But you know that. -- For direct replies, take out the contents between the hyphens. -Really!-

[Moderator's Note: I'm going to leave the top-posting debate alone, but please do try to limit your posts to 80 columns in width where possible. Thanks, SJ "Old Geezer who insists on reading and moderating from a shell account" S]

A better antenna will help. A receiver with better automatic gain control
will help a little bit. But you're basically hearing stuff due to problems
in the ionosphere, which is something you don't have too much control over.

Most of the digitally controlled radios have rotten AM performance, unless
you're willing to invest some serious money. The original GE Superradio is
worth checking out if you can find a used one; it is a much better performer
than the Superradio III.

It's probably too close for you to pick up by skip, but too far away for you
to pick up by groundwave.

Subj: Good News About George Putnam!
Date: 3/8/04 8:12:50 AM Pacific Standard Time
From: newsmax@newsmax.sparklist.com (NewsMax.com)

March 8, 2004

Dear friends of George Putnam:

We are pleased to report that George Putnam will be back on
the air on Ontario's "radio of the stars."

Here are the details:

Show kicks off Monday, March 29.

George will air Monday thru Friday Noon-2PM on KSPA
1510 AM Ontario, Calif.

He can also be heard via the Web on the CRN Radio Network
at www.crni.net.

Sincerely,

NewsMax.com

****
The legendary George Putnam is 89 years young and a veteran
of 69 years as a reporter, broadcaster and commentator...
and is still going strong. Click here for George's complete bio:
http://www.newsmax.com/pundits/Putnam.shtml

I remain respectful and a little bit hongry,
X
Guv Bob

You might want to consider using a newsreading system that actually works,
rather than the google interface. Honestly, once you try a conventional
newsreader, you won't go back.

Go to Google and search for "atomic clock". In the first 20 or 30 listings you should find hobbyist sites that have diagrams and maybe even kits.

619. broadcasting from the internet (pirate radio station?)

Newsgroup: rec.radio.broadcasting
Date: 2004-03-09 03:30:53 UTC
From: Ioan Ghip <_not_real_@hotmail.com>

Hi,
I live in NW USA (oregon).
At home I listen a lot to some Romanian radio stations over the internet...
how bad is if I make a pirate radio station to listen on my car radio those
internet stations?
and if is not *that bad*, then what is the best solution? I don't have to
broadcast in stereo because the signal I get is mono.
any suggestions?

You might want to search at http://www.google.com using the terms wwvb decoder clock. There's plenty to select from and a number of kits available.

I don't use the google interface (which I'd think would have been pretty obvious). I'm just saying that there are undoubtedly many who do, and the limitations that the interface presents should be considered (or are these features for the convenience of these users? It's a judgement call).

Besides, hanging on to one method in changing times could be a real impediment to advancing your own future. Topposting puts the new material where most readers, albeit not the best ones, will be presented to the user, and what's wrong with that? It's much more inconvenient to have to scroll down, or in the case of the google interface, click to the entire document, to find the added comments, especially if another bane to an active newsgroup, the unedited content of the thread before it, remains.

I'm not going to get into a "my newsreader is better than yours is" debate. If the means existed to impose standards on the various clients out there, then there'd be incentive to make non-compliant clients tow the line. In the meantime, I think it's a losing battle, much like the Beta/VHS wars in the 80s. I have enough stress in my life without having to worry if I'll be banished for not using what could be considered obsolete ettiquette.

And that's all I have to say about that.

Shortwave is still kind of fun. I have an advantage in being a Ham
Radio operator and use a Kenwood TS-690 that has a wide coverage
receiver. The antenna is a long wire dipole with a 1:1 balun and an
automaitc antenna tuner in the radio. It'll easily receive adjacent
stations as it sits next to my noise-generating computer. I can also
transmit legally.

I like Art Bell as a person but I wouldn't have spent nearly $2,000
just to receive a radio show. I believe it's carried in my market, so
a regular $5 radio will do for me.

If you only want to go a few feet so that a signal from a CD player or a laptop in your car is picked up by the car radio, that is perfectly legal, and in fact several companies including Sparkomatic make devices intended for this purpose.

If you want it to be picked up all over the city, there is no legal way to do this yet. BUT, it may well be possible to get good internet access in your car soon with some of the broadband wireless services.

>$400 a foot because they make the system sound better.

I got a great story for that, too. A new audiofool neighbor moved in under the main lobe of my 1500W HF ham radio station. He installed his $20K stereo system with the train engine starting cables to the speakers, big enough to crank the train with no loss in voltage up to 800 yards. I could hear a terrible buzz right through the walls of my house from way over there when my packet radio modem keyed up the beast for a beacon. Man, those are SOME audio power amps! Are they 240VAC? 480? 3 phase?

Well, my ham antennas are pretty easy to spot. Looks like a little VOA installation. I'm responsible for any toaster that won't toast within 20 miles. "It's that damned ham radio of his!", they curse. I guess he didn't notice them before he moved in. Of course, I got a threatening phone call, referred him to FCC so he could get the free RFI booklets, all very friendly and helpful.

"Listen, I'd be happy to come over and solve YOUR interference problem. I'll even pay for the new cables and any connectors YOU need.", I offered. After he cooled down a few days and his BP dropped below 200/170, he asked what I wanted to do.

I wanted to replace the starter cables with #14 foil-shielded mic cable, because I had a 500' roll in my service truck. Oh, ballistic we went again. That would make his stereo sound like a Radio Shack Flavoradio! Oh, God, NO! Ok, let's compromise. I'll come install the new cable and we'll compare it to the battery cables off the train. Should be easy to hear the difference, eh?

Wrong......There wasn't any difference in the sound. There also wasn't any RF feedback from the speaker-leads-acting-like-big-antennas back into the input balancing act of the big DC-coupled power amps, either. 1500W on 20 meter SSB never made so much as a click. The cable is made for XLR mic cords I make up for churches whos PA systems I fix. The speaker was hooked to the two #14 conductors and the foil shield drain wire was connected to the stereo chassis ground lug and

left open on the speaker end, creating a Faraday Shield (the late
Michael Faraday (1791-1867):
http://scienceworld.wolfram.com/biography/Faraday.html
would have been proud of me using his invention.

Happy neighbor, now good friend. Several audio myths blown all to
hell. Better informed consumer...(c;

>cost him $100,000 or more and it only has an incredibly expensive
>turntable as a source. There isn't a CD within eyeshot.

I'm an ASCAP and BMI-licensed DJ and do a lot of outdoor audio work
for parties, car lots, etc. Thousands of hours of MP3 music on 360GB
of hard drives pumping a nice DJ board from Winamp (before AOHell)
with compander and cross-fader plugins. It runs itself until some
cutie has a request to look up at the party.

Time and Time again I have been asked what kind of source I use for
all this wonderful music that sounds SO good being played through
APPROPRIATE speakers, those that require TWO people to lift and load,
not something 6" across in a pasteboard box labeled "woofer" by
Tweeters at $800. The just can't believe it's ALL MP3 music being
played. (No, I can't hear the 128Kbps sampling rate, either...(c;)
>

>quality is going to come from.

I'm still wondering why we're buying IBOC, now that "music" is no
longer played on AM, AT ALL, outside of Nashville's WSM. Who needs to
hear Rush or Bill or Gripe Radio Locals in digital? A little white
noise makes the program more interesting!
>
>The best test is with a very high quality pair of headsets where
>you'll hear every artifact up close. I can't even listen to C-Quam
>because of the gyrating stereo image. It causes motion sickness
>standing still.

I'm very protective of my Sennheisers, here. Have you played with
those $150 little plastic Bose phones? HOW CHEAP they're built! Best
Buy can't keep them out for a demo because the plastic headbands keep
snapping off.

Most all headphones over $20 have about the same sound. BUT, I rate
them with NO INPUT. I put them on and move around, listening for the
headphone-induced, plastic creaking noises most all of them make. The

better Sennheisers are like HEAVEN in comparison to most other brands......they just don't CLICK OR CREAK...which drives me crazy.

I seldom listen to "broadcasting" any more because I used to be in the business back when you HAD to actually put program material on the air that didn't include an 800 number and playing 40 minutes of Di-Teck Dot CON per hour would result in license revocation and heavy fines.....you remember....when the FCC was run by SANE ENGINEERS, not political hacks and lawyers trying to sell off the publics property on Clear Channel's payroll.

Yes, I have one of these clocks also. The thing is, these clocks
are set 6 times in a 24hr perod by the WWVB signal. The rest of the
time the time base is an ordinary crystal. I want my clock to be
set on a more continous basis. This could only happen with the
continous decoding of the signal. This is how the "professional"
clocks, such as those made by Spectracom work.

Yes. I use Total Recorder to rip BBC programmes to MP3s on-the-fly
all the time. BBC's players are java-downloaded media players in
webpages.....but, alas, to hear them they MUST send wav data to the
soundcard, through the Total Recorder proxy engine, which acts like a
T in a pipe.....(c;

A 700MB CDR will play 10-12 hours of BBC Radio (insert number here) if
you just let it run. Why do you think the copyright moguls are so
intent on making it illegal to broadcast over any internet radio
station?.....(c;

Great buy at so cheap a price.....with lifetime free upgrades, too!
Every time Total Recorder comes out with a new version, I get an email
to go get it on my license.

You might consider the old Heathkit clock, which still turns up cheaply
at hamfests now and then.

If you build your own, make sure you use nixie tubes. That's important.

You'll find that most of the schematics on the net for atomic clocks are
of the crystal variety-they set once or twice a day with WWVB and the
rest of the time use a crystal. You'll have to do some digging to come
up with something that does continuous decoding, but I'm sure it's out
there.

What I did is use a GPS-disciplined receiver to give me a highly
accurate 10 MHz standard. The receiver costs $250 from
www.buylegacy.com but you'll end up paying (way too much) for a power
supply/line lump and the antenna. I also spent money on software to
use with it on my win2k box.

Every 10 minutes that software updates a web page with the sky view
and how the high-grade crystal oven is functioning, including
estimated error over 24 hours if it loses contact with the GPS
satellites.

Hi,
An RDS (or RBDS as you have there in the US) generator is a very simple machine. What you need is an RDS generator (a complete one may cost around $1000). You simply connet it after your stereo generator, on the MPX signal before the FM exciter. If you want perfection you should feed the pilot 19kHz from your FM generator (not all stereo coders have this signal as an output to use) so that the internal 57kHz generator can lock onto it without having to extract it from the stereo feed. It isn't absolutely necessary anyway. I know many manufacturers here in Italy, not any in the US where prices are higher. If you need any names let me know.

Further, having owned one of these clocks for a brief period before the holidays, WWVB doesn't have reliable coverage during the day (since it's affected by the same propagation issues as AM radio, if not more so). The clock I had (available at Sam's Club for about $25) set itself only once a day, assuming it got a signal in one of six hours from midnight to 6am. Maybe this is what was meant by "sets six times a day", but for what it's worth, my clock's manual said it only set once, if successful, but tried up to six times until it did.

I honestly don't see the advantage in running so close to the time standard....if you want an accurate timebase, use the color burst signal from a local TV station....their timebase is every bit as accurate as what you'll get from WWVB, and most are available 24 hours a day. -- For direct replies, take out the contents between the hyphens. -Really!-

Mine is set only once per day, sometime between midnight and 4 am.

I was under the impression that the reason this was done is that the signal is too weak to be decoded during other times of the day. In fact, I have some (admittedly very inexpensive) atomic clocks that have *never* decoded the signal here in Florida.

Dennis,

I don't know what you mean by ordinary crystal, but even.001% is not very
good. You may want to look at high accuracy temperature compensated
oscillators. Depending on where you live, you may actually be able to phase
lock your oscillator to the WWB carrier. You would have to use a phase
detector that does not pull you off to one side if you lose the signal.
Also, the ~3.58MHz color subcarrier on some TV stations is locked to a
cesium standard.

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least March (2004)".

Sunday, March 14, 2004 - KEVA-1240, Evanston, WY 1:00-2:00 am MST (3:00-4:00 am EST).

Sunday, March 14, 2004 - WNNR-970, Jacksonville, FL
WVOJ-1570, Fernandina Beach,
FL 12:00-1:00 am EST.
E-mail:wgsr1570@nrcdxas.org

Sunday, March 14, 2004 - WTOP-1500, Washington, DC 12:00-1:00 am EST.
WWW: http://www.wtopnews.com/

Monday, March 29, 2004 - WXHL-1550, Elkton, MD 12:01-1:00 am EST.
E-mail:d_oetting@hotmail.com
Phone:410-398-3883

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

650. LAST MINUTE DX TEST INFO - IMPORTANT

Newsgroup: rec.radio.broadcasting
Date: 2004-03-12 23:21:35 UTC
From: ircamember@ircaonline.org
Message-ID: <c2tglv$c5m$1@xuxa.iecc.com>
Source record: 5791
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Some IMPORTANT last minute info on some 3/14/04 DX tests:

1) The WNNR-970/WVOJ-1570 test for 3/14 has been CANCELLED; the 1570 station changed hands earlier than expected and the new folks need to start their testing, and the engineer for 970 reports some recording problems with the audio file that was to be used. The WNNR-970 kHz test has been TENTATIVELY rescheduled for 3/21/04, same time - more updates to follow.

2) Concerning the KEVA-1240 DX test, also on 3/14/04, the engineer passes this along:

All DXers --- last minute change!!

As I was programming in the DX test Morse/Voice ID's this morning I decided to just take the 10 minute loop and program it back to back to back so it will just about fill the entire hour. ABC News will run at 1am, then a weather forecast at 1:05, then into the test. And will continue for the next 57 minutes. So I want to hear from EVERYBODY! You can sit there and PARK on 1240. It is bound to pop through at some point! That gives all of you almost an hour!

Good luck!! QSL cards will be sent

Michael
KEVA Evanston Wyoming

Further, this test will run next weekend (same time, same day) as well, and possibly after that - again, more updates to follow!

Lynn.

651. For sale: Parttial ownership in AM/FM station in Virgian college town.

Newsgroup: rec.radio.broadcasting
Date: 2004-03-12 23:21:37 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c2tgm2$c6e$1@xuxa.iecc.com>
Source record: 5790

For sale:

(The "Radio Crazy" is baaaaaakkk!!)

Partial interest in AM/FM station in beautiful small
Virgian college town.

Joint venture. Active or inactive investors with
$20,000 min. each are welcome. No individual may own
more than 49 percent of the stock. This rule applies
to me too!

AM is 1 KW fulltime, non-directional, class "C" which
was once called class IV or "local" or "graveyard".

FM is class "A" with superhigh tower.

They are asking $400,000 for the pair and this
includes the main building, about 3.25 acres of land
and the AM tower. The FM transmiter site is leased at
$400.00/month.

Station grossed about $170,000 in 2003 includigj
trades and showed a slight profit. In 1999 it did a
lot better billing about $270,000 so there is
obviously room for improvement.

I am NOT an agent, broker, shill, owner or part owner.
More important, I am NOT a crook!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "Radio Crazy"
aka Moron Gottesman

Gerry and others,
Yes I have went thru 2 of those dam things already. A big white one
with normal minute and hour hands which I threw away after a few weeks
of trying to make it behafe. Then got the more or less square shaped
one with wooden panels on eachside of the clock face. Shows
day date weekday (seconds or indoor temp) Outdoor temp. Has an ICON
top center thats supposed to show up black if WWV is being heard.
Mine rarely does unless take it upstairs and point it north/south.
Then the icon (wwv) shows very dimly. Mine is supposed to access
the WWV sig during hours from midnight to 6am only. But still the
ICON rarely shows up. I hear the people who sell them are very
helpful and will even replace your clock if you cant resolve the
problems. Their ph nr is 1 (800) 972-0292 and ask for Shelly.
Kokomo Joe (in Hawaii)

Forget about getting an atomic clock to set in Hawaii. The signal is
simply too weak. Atomic Time (who I bought my dual time clock from) says
that it helps if you point the antenna (apparently they just use ferrite
rod antennas-just like in a cheap transistor radio-to recieve) towards
Fort Collins, which is due east of my QTH.

Yes, that's the impression I got too. Somewhere on the net I saw a
diagram of WWVB's coverage area-it covers all of North America at night
and just a little area of the Rockies during the day.

Are you sure your not talking about wwvb, and not wwv. Or in
your case it would be wwvh.

656. a warning about WARW and Christie Banks

Newsgroup: rec.radio.broadcasting
Date: 2004-03-13 06:23:48 UTC
From: wiseguyusa@yahoo.com
Message-ID: <c2u9dkobg1@xuxa.iecc.com>
Source record: 5795

For those of you who may be considering responding to the ad in FMQB for the mid-day position at WARW please read about my experience when I answered the same ad 1 year ago.

Being from the DC/VA/MD area I have been looking for a gig in my hometown area for a long time. The WARW position sounded like the "opportunity of a lifetime" that they claim in the headline. I responded to the ad and got an email from Christie, that in turn lead to a few phone calls in which Christie said she would "love to talk" to me. So, I flew to Baltimore at my own expense, (about $350) and upon my arrival in Baltimore called to make an appointment. Well, Ms Banks did not take my calls, or return my voicemails, when I did finally get through on the phone she told me she was "too busy" to talk, and to try in the next few days.

Well over the next few days Ms Banks did not take nor return my calls. Now, a year later the same "opportunity of a lifetime" is open again. Maybe this is the "opportunity of a lifetime" if your doctor gave you a year to live, or you have lots of money to burn playing hide and seek with someone with no sense of professional ethics.
I really expected a certain level of professionalism in from management in market number 8, but Ms. Banks thoroughly dispelled that fantasy.

Here is the ad, currently running on FMQB.com:
The opportunity of a lifetime! Middays at Classic Rock 94-7 The Arrow, WARW, Washington, DC! Looking for the absolute best! Someone who can relate to the lifestyle and engage the listener with an entertaining at work presentation! Minimum 3 years medium to major market EXERIENCE a must. Air check, resume, references ASAP to Christie Banks, Program Director, WARW, 5912 Hubbard Drive, Classic Rockville, MD 20852. No phone calls, please. Infinity Broadcasting is an EOE. (Posted 01/07/04)

WCBN WILL DESTROY YOUR FEEBLE FORMATS
=20
WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun.
Instead of telling our DJs what to play, we allow them to select their
own recordings from our vast and unique library. It is their
responsibility to mix together many different kinds of music in an
intelligent fashion, and show links between musical genres.

I have the feeling that I'm not getting the whole story here.
Why didn't you make an appointment before you got on the plane?
Did Ms. Banks ask you to fly to Baltimore without one and just show up
at your own convenience?

Most hiring managers, especially in large corporations in major
markets, will pay transportation to the interview for an out-of-town
applicant who interests them. That's certainly been my experience as
an applicant in the past. And yes, managers are "too busy" to just
drop everything for somebody who shows up unexpectedly from out of
town without the courtesy of making an appointment first.

I don't know Christie Banks, and I have no intention of trying to get
a job at her station or anywhere else in that market, but I bet her
side of this story would read a lot differently.

659. For sale: Partial ownership of AM/FM in small Virginia market.

Newsgroup: rec.radio.broadcasting
Date: 2004-03-13 19:03:35 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c2vlu7$96b$1@xuxa.iecc.com>
Source record: 5798

For sale:

Partial ownership of AM/FM in small Virginia college town. Beautiful area.

(The "Radio Crazy" is baaaaaakkkk!!)

Joint venture (you venture out, you go to the JOINT! LOL!)

Active or inactive investors with at least $20,000 each are welcome. No individual can own over 49 percent. This goes for me too! We don't want any bullies!

They are asking $400,000 for the stations and this includes the main building, 3.25 acres and the AM tower. The FM transmitter site is leased at $400.00 a month and is a "dynamite" site being about 3500 ft. above sea level.

AM is 1 KW, fulltime, non-DA, class "C". (Formerly called class IV).

FM is class "A", 150 watts, 2911 ft. above avg. terrain. Why else do you think the ERP is so low, silly!

I am NOT a broker, agent, shill, owner or part owner. Even more important, I am NOT a crook! I am a semi-retired radio engineer living in Macon, GA.

Tel: (478)741-1710.

References:

This is just too stupid.

During the Friday, 3/12 Ted Bell segment during Hendrie's first KFI hour, I noticed that the last word ("mouth") of the long-running Ted's of Beverly Hill's jingle was bleeped, each time it occurred.

Is Clear Channel that reactionary these days, or is Hendrie forcing the issue himself? Is the word "mouth" being bleeped on the non-CC stations that carry his show?

--
"I am afeard there are few die well that die in a battle; for how can they charitably dispose of anything when blood is their argument? Now, if these men do not die well, it will be a black matter for the King that led them to it; who to disobey were against all proportion of subjection." - W.S.

I have the feeling that I'm not getting the whole story here.
Why didn't you make an appointment before you got on the plane?
Did Ms. Banks ask you to fly to Baltimore without one and just show up
at your own convenience?

Most hiring managers, especially in large corporations in major
markets, will pay transportation to the interview for an out-of-town
applicant who interests them. That's certainly been my experience as
an applicant in the past. And yes, managers are "too busy" to just
drop everything for somebody who shows up unexpectedly from out of
town without the courtesy of making an appointment first.

I don't know Christie Banks, and I have no intention of trying to get
a job at her station or anywhere else in that market, but I bet her
side of this story would read a lot differently.

Mark Howell >>

So Mr. Know It all...
how about the GM from a NYC station WHO CALLED ME some years back. Come on
in..fast get on a plane...we'll reimburse you when you get here. Come see me
first thing in the morning.
Flew in from Chicago...for my "first thing in the morning appointment" and they
guy wouldn't see me...and didn't even have the courtesy to let me see someone
else. I was left hanging at the locked office door.
Didn't get my money back either.
So...what did I do wrong here...huh?
That's this business...I don't think you know it all.

Either that or you're another PBS dude working at my expense and spending most of your time posting here against real broadcasting folks.

I have to agree. Every job offer I've gotten or job I've applied for has paid my transportation and hotel for the interview. In each case they requested the interview and set the time. They also made all arrangements for plane tickets (I'd pick them up at the airport or they'd mail them to me) and the hotel. My credit card was needed only for the mini-bar, since many companies won't pay for alcohol unless it's part of a business meal.

As a hiring manager in New York I would never have time to interview someone who just dropped by. I would also not interview someone who arrived late without calling. I'd simply go on to my next project.

I would never in a million years get on a plane using my own money to go to a non-scheduled interview. That would be stupid.

Rich

I think "Wiseguy's" error is in failing to close the deal before he made the flight. If Ms Banks said "I'd love to talk with you", then why didn't Wiseguy ask for an appointment right then and there? At that point, since the opportunity was "one in a lifetime" it may have been in his favor to be willing to make the trip on his dime....but making the trip in the absence of an allotted time to "talk", calling only once he was in town, demonstrated that he's both impulsive and immature, and unable to formulate and execute a successful plan to achieve his goal. And what if she were out of town when he arrived? That would scare me as much as any stalker would.

Under the circumstances, if I were in a similar position to hire, and even if "Wiseguy" was my favorite candidate, he'd go to the bottom of my list, if not fall off entirely. I don't need loose cannons on my staff. Eager, sure, but not so wild that you'd never know what rabbit he'd go chasing the next time one was presented. Bottom line when looking for a job...don't do anything weird. It's a guaranteed deselector.

It sounds like your situation was different than the one detailed
earlier in this thread...again, assuming you had an actual
appointment.

In the case of the original poster and WARW, it appears - by his own
account - the program director told him she'd "love to talk to him"
but without any specific time or date. He took it upon HIMSELF to fly
to BWI and basically just dropped in. No wonder he wasn't given the
red carpet!

"I'd love to talk to you." Fine. Give me a time and a date, and I'll
be there! Coming out there without a firm appointment was his
problem, not the problem of WARW's PD or the station itself.

>That's this business...I don't think you know it all.

Mr. Howell is the well-awarded news director of a dominant commercial
station in Central California. Do a Google search on his name with
the acronym APTRA and you'll pick up a few of 'em.

Hey, there are whackjobs in this business, and some of them have
hiring responsibility. But the *usual* experience at reputable
broadcast outlets is far from what either of you describe.

Mike

Mark is a many-time award winning journalist at the #1 commercial station in
a very competitive California market. His credentials are unquestionable.

And he posts with his real name, unlike you. No name, moans and ducks.

First of all, I've been in commercial broadcasting for 39 years,
(never worked for PBS or NPR for that matter) and currently occupy a
middle-management position in a top-rated, independently-owned, medium
market station. So much for my bona fides. Your story seems
different from that told by the original poster, who got on the damn
plane WITHOUT BEING ASKED! I never said that nobody gets screwed in
this business. I just said the account as posted didn't seem, shall we
say, fair and balanced? There are two sides to every story, probably
even yours, but I really don't want to go there.

Er, in case you have not noticed, the show is a parody of everything.

Bleeping "mouth" actually makes the imagination think of something even
worse, pointing out one of the problems of censorship.

You post proves the validity of the idea of requiring a license to be able
to listen to the radio.

668. Slightly OT: foul language on TV

Hi group, a quick question. Does the foul language ruling apply to after 9 PM broadcasts on TV? I swear (ar ar) the other night on FOX, they were running "The Shield" and I KNOW I heard one of the detectives on stakeout mutter "shit". For sure they were using gutter language, how can this get by the censors, much less the FCC? Or am I just being naive?
regards,
Tom

[Moderator's Note: Fox? Are you sure? I thought The Shield was only on F/X, on cable.]

669. The Newscast Network Offers Local News to Local Radio Markets

CLEVELAND, Ohio -- Custom written and recorded newscasts for local radio markets are now available from "The Newscast Network". Presently on the air in Texas, New Mexico, Utah and Idaho, the service gives small stations without news departments the ability to provide a base level of coverage to their local audiences.

The news programming can be customized to match any format and is currently heard on AC, News Talk, Sports Talk, Classic Rock and Country formats.

Network Director Kevin Coan says it gives stations depth, and adds to listener loyalty, which equals sales.

The "virtual" newscasts are uploaded to station FTP servers as mp3 sound files for broadcast, minutes before air.

Monthly "anchoring packages" range from under 500 dollars per month in small markets and up based on market size.

The company also plans to add a National News service during the 3rd quarter of this year. It will allow local stations to maintain their network inventory. The national service will also be available to Low Power FM (LPFM) broadcasters at no charge.

For more information call Coan at 216-410-1954 or visit the website for demo material.

670. Amateur Radio Newsline(tm) Report 1387 March 12, 2004

Amateur Radio Newsline(tm) Report 1387 • March 12, 2004

Amateur Radio Newsline report number 1387 with a release date of Friday, March 12th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says that automatic stations have to avoid willful interference to other hams. Also, a magazine editor speaks out on restructuring. Hear the details on Amateur Radio Newsline report number 1387 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: AUTOMATIC RESPONSIBILITY FOR ALL HAMS

The FCC says no Amateur Radio stations are exempt from the requirement to avoid unnecessarily interference with ongoing communications. This includes automated operations. Amateur Radio Newsline's Rick Johnson, KA9VZD, is in Antioch Illinois with rest of the story:

--

According to the ARRL Letter, FCC rules enforcer Riley Hollingsworth says that it is important for all stations, including automated ones, to realize that they are responsible for any interference caused when they come on top of existing communications Hollingswoth told the ARRL Letter that an amateur had written to him alleging that what appeared to be automated PACTOR stations that were routinely starting to transmit atop PSK31 QSO's on 40 and 30 meters.

In response, Hollingsworth noted that there are no exemptions for automated stations. Rather that the Amateur Service rules address interference with other communications. The rules say that no amateur operator shall willfully or maliciously interfere with or cause interference to any other radio communication or signal.

The amateur who filed the complaint reportedly also contacted one of the PACTOR stations in an effort to develop a dialogue to solve the problem. Hollingsworth expressed the hope that all involved in the PACTOR versus P-S-K 31 problem can work things out. He also points out that stations responding to automated interrogations are equally responsible for not causing interference to existing communications.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, near Chicago.

--

Hollingsworth also issued advisory letters to three hams who operate automated stations to remind them of the rules. (FCC, ARRL Letter)

**

ENFORCEMENT: HAM WHO ALLEGEDLY HARASSED POLICE ASKED TO EXPLAIN OR TURN IN HIS LICENSE

The FCC Enforcement Bureau is once again naming names and it has asked one ham to explain why he allegedly transmitted on a public service frequency to harass law enforcement. Henry Feinberg, K2SSQ, has the rest of the story:

--

In a February 18th letter to Russel A. Brown, N1KHV, of Palmer, Massachusetts the FCC says that it is considering action based on a February 3rd Incident Report from the Monson Police Department and a February 15th Investigatory Report and a Statement. The latter reportedly was signed by Brown and documents his deliberate operation on Police frequencies without a license. This, the FCC alleges was an attempt by Brown to interfere with police communications and harass police personnel.

The FCC inquiry makes it clear that the information he submits will be used by the Commission in determining Brown's qualifications to remain a Commission licensee. The FCC also has given Brown the option of voluntarily submitting his license for cancellation in order to avoid a hearing on the issue. Brown was told to indicate his preference in his response which was due within 20 days of the FCC letter of inquiry being issued.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

The FCC also warned Brown that providing a willfully false or misleading reply would be the subject of a separate enforcement action and could subject him to additional sanctions. (FCC)

**

ENFORCEMENT: CHANGING CALL SIGNS BRINGS FCC INQUIRY

The FCC wants to know why a Tennessee radio amateur keeps changing his call sign. And, in a February 18th letter it is asking Donald H. Binkley the regulatory agency is asking the Nashville ham to explain why he has been jumping between two calls for the past six years.

According to its letter of inquiry, Binkley currently holds the call K4WX. The FCC says that license grant was originally made on September 23, 1998. On June 19, 2000 the FCC says that Binkley filed an application to change his call sign from K4WX to N4ZZ. That

application was granted on July 7, 2000. Then, on May 15, 2002 Binkley applied to change your his sign from N4ZZ back to K4WX. That application was granted on June 4, 2002. Now, Binkley has applied for the N4ZZ call once again and this time his request appears to have raised a proverbial red flag with the FCC. As a result, the Wireless Telecommunications Bureau has forwarded the latest application to the enforcement folks for follow-up and review.

In his letter to Binkley, FCC rules enforcer Riley Hollingsworth says that these ongoing applications raise questions about apparent abuse of the licensing system. He notes that the Communications Act gives the Commission the authority to request information from licensees and applicants regarding their applications and operation of their radio stations. And that's just what he is doing with Binkley,

He has told K4WX to respond stating his intentions regarding the filing of these applications. He also told Binkley to let his office know which of the two call signs he wants to keep. Binkley was given the usual 20 days from the date of the FCC's letter to respond. (FCC)

**

RESTRUCTURING: AN EDITOR SPEAKS OUT

The editor of a popular ham radio magazine says that his readers have strong opinions on restructuring, and he wants them shared. In an interview with Amateur Radio Newsline's Mark Abramowicz, NT3V, CQ's Rich Moseson, W2VU, talked on a general level about the various restructuring proposals and about his upcoming C-Q reader survey:

--

CQ's Rich Moseson says there's been an active dialogue going among readers of the magazine since the latest round of amateur radio licensing restructuring proposals landed at the FCC's door:

--

"We have a whole raft of petitions that have been filed with the FCC over the past several months all proposing various things from radical changes to little tweaks from eliminating the code requirements completely to adding new ones," Moseson says. "It's a great opportunity for discussion and for a forum on what the ham community thinks our hobby should look like going into the future."

--

Moseson says despite the diversity of those proposals, he says there seemed to be some consensus emerging among those who submitted comments to the FCC and other forums:

--

"It looked like the majority of those people would agree on a restructuring where the code requirement was kept in place at 5 wpm for Extra," he says.

--

And now that the American Radio Relay League has weighed in with its own proposal - a no-code entry license called the Novice - complete with HF privileges, Moseson says CQ wants to know what readers think.

--

"W5YI's 'Washington Readout' colum is all about the League's proposal in detail and our reader survey for April is also about the League's proposal," Moseson explains. "It's going to be asking our readers what they think of each of the major points of the proposal, whether they agree or disagree or have no opinion. And we'll, of course, be reporting the results of that survey in probably the June issue."

--

Even if you're not a CQ subscriber, you can find a copy at a newstand or bookstore.

Moseson says amateur radio must and has kept in step with the times:

--

"I'm not sure what we're going to come out of this with or what direction it's going to go to, " Moseson says. "But one of the points that I've always made is that if we are going to keep ham radio as a healthy, vital hobby and service then it has to adapt to changing times and the licensing structure has been doing that over the course of many, many years."

--

As to how soon, we might expect action from Washington. Moseson says it's difficult to predict:

--

"My guess would be the earliest that you'd see any kind of a decision from the FCC would be the end of this year, probably more likely about a year from now in the spring of 2005," Moseson says.
--

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Moseson also offered his opinion that even if Morse testing was not included as a requirement for any of the license classes that it wouldn't go away. He says CW contest entries have grown in recent years. Thats good news for those advocating long term preservation

of the historic mode. (ARNewsline(tm))

CONVENTIONS: THE NAB HAM RADIO RECEPTION IN LAS VEGAS NV.

Its only a few weeks until the National Association of Broadcasters holds its 2004 gathering. One of the major social events that occurs at the NAB convention each year is the `Amateur Radio Reception'. This year will be no exception but for the first time ever this years `Ham Radio Reception' will be hosted by Heil Sound, Limited and its well known owners Bob, K9EID, and Sarah Heil. They would like to invite any and all amateur radio operators who will be in attendance at the NAB show to join them for this annual fun event.

Audio Only: Hear it at http://www.arnewsline.org
--

Bob and Sarah are promising a fun time. They are also planning appearances by some of their special friends as well as dozens of attendance prizes that will be given during the two hour reception. This includes several of the new Heil Poline performance microphones autographed by legendary Eagles guitarist Joe Walsh, WB6ACU.

This years NAB Ham Radio Reception takes place Wednesday April 21st, from 6 to 9 P.M. local time. The venue is the Las Vegas Hilton Hotel, Ballrom B. Of coarse, thats in Las Vegas, Nevada. Bob says all that is required to join in the festivities is to bring a smile and your NAB attendance badge for complimentary food and drink.

For more information please feel to contact Bob or Sarah at 618-257-3000 or by e-mail to bob@heilsound.com. The Heil's say that they hope to see you there. (ARNewsline(tm))

**

CONVENTIONS AND HAMFEST TRAVEL TIPS: TRY FLYING OR TAKE THE BUS

Talking of ham radio social events, its no secret that gasoline prices here in the United States at historically high levels, and the Department of Energy saying to expect prices to go a lot higher. As a result, many hams are asking the rhetorical question: Can I afford to go to a major hamfest or convention this year? Especially one of

the big ones like Dayton or NAB. The answer for the most part is yes, but a lot depends on where you live and how far you have to travel to that show. Amateur Radio Newsline's Bruce Tennant, K6PZW, explores some alternatives to driving your own car:

--

If your QTH is several hundred miles away from your favorite hamfest and you drive a gas guzzling vehicle like an S-U-V then you may think twice about going this year. That is, unless you can find an alternative to $3 or more for each gallon of gasoline. Well, there are currently two very good transportation buys available if you are willing to give up the luxury of a personal vehicle.

Lets take a centrally located city like Dallas, Texas. There's a big convention every year in the suburb of Arlington that draws exhibitors and attendees from all across the country. If you live in Houston and plan to attend, its about a 275 mile drive each way. In an S-U-V that gets 10 to 12 miles to a gallon at the projected $3 a gallon the drive one way will cost about $81 each way or $162 round trip. Compare that to the $89 round trip currently being offered between the two cities on Delta and Continental airlines. Want cheaper? Go greyhound, buy your ticket 7 days in advance and it will only cost you $58 round trip.

And what about Hamvention in Dayton Ohio? That's coming up in May. Well, its the same thing here. Using Chicago as your home, the trip is also about 275 miles each way. To drive will cost about the same but make your reservations now and fly out of Chicago's Midway airport and ATA will take you full circle for about $120. Go Greyhound and you can go full circle for only $82

Live further way. Say Los Angeles or San Francisco? Well, you can really get a bargain. Fly United Airlines out of Santa Ana California early in the morning with a connection in Chicago and you can go round trip for $255. By way of comparison, that same ticket a year ago went for about $100 more. And for you Northern California folks, you can do the trip for $283 out of San Jose on American Trans Air.

And the usual disclaimer here,. The prices we quoted we those showing on Sunday March 8th on several travel websites including greyhound.com and orbitz.com. Since the airlines are notorious for changing prices at a moments notice, these could be gone by the time this newscast goes to air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Two final tips that most frequent flyers already know. First, book early. The best prices for flights are usually sold on-line months in advance. Also, keep an eye on all of the Internet based travel

discounters and check their prices daily. You never know when a flight or a bus ride to your favorite hamfest may be a lot less expensive than what it costs to drive your vehicle. And you won't have to hunt for a place to park, either. (ARNewsline(tm))

**

INTERNET SCAMS: ARRL AND RAC E-MAIL BEING SPOOFED

The ARRL and Radio Amateurs of Canada are warning their members and others about bogus or spoofed messages carrying ARRL.net or rac.ca suffixes. Both organizations say that they have been notifoed by people who have received e-mail messages alleging to be from the ARRL E-Mail Forwarding Service or directly from Radio Amateurs of Canada.

The senders of the e-mail encourage you to open the file or an attachment to the e-mail. Don't do it. These messages are false and are the result of one of the variants on a number of viruses now permeating the Internet. The attached file contains variations of worm viruses, MyDoom, Bagle and Netsky. Opening the file could result in your computer being infected. The bottom line: Delete the message and forget you ever got it. Your computer will be a lot safer that way. (ARRL, RAC)

**

HAM RADIO ADVENTURE: COMMUNICATORS NEEDED FOR CAVEING EXPEDITION

Gulf Coast United States, along with Caribbean, or South America base station operators are needed for communication on the ham bands with a scientific expedition. This, in July through August time frame.

The 60 day expedition will explore deep caves in the high Andes mountains and jungle in the western Amazon area of South America. Expedition access to the remote areas is via trekking on foot and pack animal. The expedition will use a solar and battery powered 20 Watt backpack transceiver. Antennas will be a wire dipole or vertical. A miniature notebook computer will be along for digital operations.

Communications will consist of position reports, some short messages with families of expedition members, and any possible emergency or medical messages. All operation will be non-commercial.

Operators with good base stations, efficient antennas and low noise locations are needed on the 40 through 15 meter amateur bands. The operations will use SSB, CW and a variety of digital modes. If you are interested, e-mail Bonnie Crystal, KQ6XA, at radioadventure@aol.com. (KC5FM, KQ6XA)

**

PUBLIC SERVICE: BAKER TO VEGAS FOOTRACE NEEDS YOUR HELP

Also in need of ham radio communicators is the famed Baker to Vegas Challenge Cup Relay race. Baker is Baker California and of coarse Vegas refers to Las Vegas, Nevada.

This year's foot race for teams from Law Enforcement Agencies takes place on April 24 th and 25, starting near Baker, traveling along State Route 127. The race then continues through radio show host Art Bell, W6OBB's hometown of Pahrump, Nevada and finishes up in Las Vegas.

For years, Amateur Radio has played an important role in the annual event. If you or your group is interested in helping with communications, please visit www.bakertovegas.com on the world-wide-web, to sign up. (Via e-mail)

RADIO LAW: CONGRESS ON ITS WAY TO INCVREASING INDECENCY PENALTIES AGAINST BROADCASTERS

Federal legislators are inching closer to increasing the penalties against broadcasters who permit indecent or obscene material to hit the public airwaves. This, as the House and Senate Commerce committees pass bills that would sharply boost fines of television and radio broadcasters who violate indecency regulations.

The U.S. House of Representatives measure increases fines to as much as $500,000 per violation from the current $27,500 per violation level. That version also contains a so-called three strikes provision that would require the FCC to hold a hearing to determine whether a broadcast license should be revoked after three violations take place. It also permits the FCC to weigh heftier penalties against the person who actually utters indecent material on the air as well as the ability to go after the network that broadcast the material in addition to the individual stations. Right now, the FCC can only fine the licensed station that aired the material and has limited ability to penalize the person who said it.

Current FCC rules limit indecent material presented in a patently offensive manner to late night hours, when children are less likely to be a part of the listening or viewing audience. In some past instances the broadcast standard has been applied to obsenity and indecency issues in private radio including the Amateur service.

Newsline attempted to find out if new and higher penalties directed by Congress might be applied to ham radio. We were told that at this point, the FCC's and Congressional actions are directed at the "broadcasters" and not at Amateur Radio. (Published news reports)

**

HAM RADIO BUSINESS: QRZ.COM HAS T1 TROUBLE

If you tried to access the QRZ.com website late on Thursday March 4th you probably found it down. The sites owner, Fred Lloyd, AA7BQ, reports that around 1800 UTC both of the dual T1 lines that supply the sites 3 Megabit feed to the Internet went down.

According to Lloyd, the sites network is supplier is Cable & Wireless and his location is served by two leased high-speed lines by the local phone company, Qwest. The Qwest lines connect the Arizona based QRZ.com servers to the Cable & Wireless location in downtown Phoenix.

About 2 hours after the outage was reported on Thursday, one of the lines was repaired and brought back up. For reasons unknown to Lloyd, the second T1 line has not been brought back up. Now, however, instead of a Qwest problem, it appears that the second line was intentionally disconnected by Cable & Wireless. Lloyd says that Cable & Wireless is currently pulling out of some of the less profitable market areas. Apparently, QRZ was mistakenly disconnected from the grid even though Lloyd had previously been assured that Cable & Wireless is not pulling out of his market. This put Q-R-Zeds back at 1.5 Megabits. That's the same speed that they were for years before the upgrade last December. (QRZ.com)

WORLDBEAT: MOTOROLA DONATES RADIOS TO VK EMERGENCY CORPS

Communication is set to improve for one of Australia's most remote indigenous Army Cadet Units following the donation of 24 state-of-the-art two way radio's by Motorola Australia. The company presented the radios destined for the Bamaga Cadet Unit in Far North Queensland to the Australian Parliamentary Secretary for the Minister of Defence , Fran Bailey , at a recent ceremony in Melbourne. Bailey said that she was delighted with the generous support shown by Motorola and acknowledged the contribution the company has made to the nations Indigenous Participation Project. The Bamaga Cadet Unit comprises Two Adult Officers and about 15 cadets. Bamaga is located the tip of Northern Queensland and is one of the most remote parts of Australia. (Q-News)

WORLDBEAT: TOWARD RESOLVING THE MEXICO - US 560, 780 & 920 KHZ BORDER SITUATIONS

An update on the radio border war developing between Mexico and the United States as we reported a few weeks ago. According to Joseph Berring in a letter to the CGC Communicator, the alleged problems caused by the Mexican broadcasters on 560, 780 and 920 kHz has become a top priority for both the U.S. FCC and the State Dept. as well as for the Mexican Administration.

According to Berring, top U.S. officials recently met with their Mexican counterparts in Mexico City. Berring observes that despite the controversy and problems that have arisen, Mexico's position has been very clear and unwavering. That being existing bilateral agreements are valid and they have not been violated. Additionally, Mexico seems to have some complaints of its own regarding U.S. stations.

The United States position is obviously a bit different. Not only does the US administration feel that there are clear violations, but that there are specific sidebar agreements dating as far back as 1996 that address the issues at hand.

Berring, who is a consultant on United States and Mexico border issues says to stay tuned. It should prove interesting. (CGC)

WORLDBEAT: AN ECUADOR DIPLOMA FOR YOU

A new Republic of Ecuador "Equatorial Line Diploma" for contacting stations at a latitude of zero degrees is being issued by the DX-TA-SEA DX CLUB, This multicolored certificate is awarded to Amateur Radio Operators and Short Wave Listeners for confirming contacts with the 20 different Ecuadorean HC and HD prefix areas. This award was developed to recognize past Amateur Radio activities from Ecuador. More information is available from Dr. Rick Dorsch, NE8Z, P.O. BOX 616, Hamburg Michigan. The zipcode is 48139. (NE8Z)

**

WORLDBEAT: SOTA EXPANDS TO GERMANY

According to the RSGB, the 'Summits on the Air' - or 'SOTA' - awards program has announced that the Alpine region of Germany is the latest geographic area embrace this awards project.

The Alpine SOTA program began operation on March 1st and is already being heralded as a success. The parent 'Summits on the Air' program began in 2002 . Since then there have been over 2000 hilltop activations and 15,000 contacts made. (GB2RS)

**

DX

In D-X, word that GM4YXI, is active portable 9M2 from Kuala Lumpur through the 29th of March. He also plans to operate from one or two

Islands On The Air island groups. Look for him on 20, 17 and 15 metres and maybe 12 and 10 metres CW and SSB. (GB2RS)

And PA3GIO will be active slash HI9 from the Dominican Republic through March 18th. Look for his signal on 80 through 10 meter SSB. (GB2RS)

**

THAT FINAL ITEM: TRANSMITTING DATA FROM MARS - AND CONSERVING ENERGY

And finally this week, were you aware that the pair of Mars Rovers now exploring the red planet actually have two ways to send data back to Earth? They can send it direct or indirect. Bill Pasternak, WA6ITF, has more:

--

As you might expect, direct entails using the rovers own high-powered microwave systems and using up a lot of very precious power reserves. Kind of like making a long distance contact on 2 meter FM simplex. You can do it but you need high power and a very directional antenna.

The indirect method uses low-powered UHF links to relay the data to orbiting satellites. These satellites then use their high-powered transmitters to beam the data back to scientists. Thats not much diferent than working a long distance on 2 meters, but doing it with an H-T through your favorite repeater.

To save energy on the solar powered rovers, the UHF relay method is preferred. As of February 18th, the two rovers had sent 10 billion bits of data from Mars to Earth. Of this, only 18% of that data was transmitted directly. The rest was relayed through the Mars Odyssey and Mars Global Surveyor satellites.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

Ms Banks was aware of my intention to come to DC to speak with her, the timeframe was narrowed down to within a couple of days.

I'd love to hear Ms Banks side as well.

This was not one communication, but several, both email and phone, up to the day I left Oklahoma bound for Maryland when the last correspondance was "call me when you get to town" there were no communications problems until I got to Maryland.

There was nothing "impulsive" about my actions as I expressed emphiaticly before flying to Maryland, I have wanted to return to the DC area for many years, it is where I grew up. For whatever reason the carrot was explicitly dangled, I took the bait and jumped through the hoop. Based on my experience it sure looks to me like I was down the list as far as candidates, but usefull as a bargaining chip to haggle a lower salary for candidate number one.

On a more positive note I found out yesterday that Micheal Hughes is now OM for the Infinity DC area cluster. I worked with him at KLOL in Houston, and tried to contact him when he was in Atlanta before I left for Maryland last year. I would routinely ask him about WWDC when he was programming it.

"The Shield" runs on the cable channel FX, NOT the OTA network Fox...and yes, the rules are less stringent for cable, since the customer directly pays for the service.

As the moderator correctly notes, "The Shield" is on F/X, not Fox. As a cable channel, it is not covered by the FCC's indecency rules. Those rules apply to broadcast channels only, and designate a "safe harbor" when indecent material can be ran -- after 10 PM and before 6 AM.

The topic is WWVB, the binary signal. WWVH is the voice signal, which an autosetting clock will not understand.

That may be the case Scott, but the 'atomic clocks' they are speaking of use the WWVB signal from Ft. Collins, Colorado on 60 KHz to set their time automatically.

That signal may indeed not be propagating well enough to be of use in Hawaii.

I agree with whoever said WWVH in Hawii is l/c and on same status
as wwv in Colorado, so these "skyscan" clocks should perform as
specified. I found though that my latest one will keep time
right to the second for a period of time, the I have to move it upstairs
where reception is better and leave it there for 24 hours. Once
reset to exact time tick I again put downstairs in the shack and its
good for another momth or so. I fail to see how the clock reader
can discriminate between WWVH (on Kauai) and WWV in Colorado.

There used to be a company, _ Pulse Incorporated _ back in the sixties and seventies that produced a book here in Louisville. I don't know whether they are around anymore. I do know that their ratings and Arbitron's were always being compared by the two local r&r stations, WAKY and WKLO. Oh God, what ratings games they played! It was FUN top 40 radio back then. Louisville was a break out market and with two stations vying for those teen and YA bucks, we heard new music weeks before they were playing it on other stations.

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card,
letter, or e-mail to the station personnel, thanking them for going to
the trouble to run a test!

Thursday, April 1, 2004 - WTBQ-1110, Warwick, NY will conduct a DX test
from 5:15 - 6:00 am EST. The test will feature novelty music and Morse code IDs.

Reception reports may be sent to:

Mr. Rob McLean - Program Director
WTBQ-AM
62 N. Main St.
Florida, NY 10921

WWW: http://www.wtbq.com

(Arranged by Rob McLean of WTBQ.)

Also, if you hear a test, PLEASE, PLEASE let me know, via either
e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

In small markets, there is one alternative.

> Does Arbitron have any competitors?

Not now. In the past, since they started the current radio diary survey in about 1965, we have had The Pulse, C.E. Hooper, Mediastat, Mediatrend, Burke, Audits & Surveys, Birch. None won advertiser acceptance, or, in the case of the first two, lost it due to mythology concerns.

In major markets, and among major advertisers, Arbitron has nearly universal acceptance.

But most atomic clocks use WWVB on 60 khz out of Fort Collins. WWVH, to my knowledge, only uses HF freqs (5, 10, 15 Mhz). But yeah, I'm sure the rice keeps better time than the people who eat it. :)

686. Classical Music Format Host Processing?

Newsgroup: rec.radio.broadcasting
Date: 2004-03-17 16:14:22 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <c39tgu$l2c$1@xuxa.iecc.com>
Source record: 5719

What audio processing gives the ``classical announcer boom'' to classical music stations? Columbus Ohio has the same ``Radio Station of the New York Times'' sound on their announcer. It can't be that people actually sound that way in real life, that work in classical stations.

I mean you won't be behind somebody at Kroger and discover that he announces classical music by listening to him talk to the cashier.

Hoffnung had a cartoon of an opera basso with an electronic ``wobble'' adjustment on his chest; perhaps there is a similar attachment for classical announcers? ``bass boom'' box.

If there is such an attachment, why don't DJs use it too?

I heard the LuaLuaLei transmitter a lot, but not WWVH, when I lived there.
500kW or 1MW IIRC, somewhere around 24kHz.

Hey all,

I apologize for being slow to push Airwaves articles through over the past couple days. I caught a nasty cold that had me laid up for a few days.

I am now back on track and posting articles in a reasonable amount of time.

In other news, you should expect some temporary difficulty getting stuff posted this weekend because I am moving the server that handles the moderator's mailbox. It's not a major move; all we have to do is move the computer to another colo facility and change IP addresses. However, if your post does not go through within 24 hours this weekend, I would strongly suggest resubmitting it.

Also, I will be off the net for a day or two when my baby is born (sometime in the next three weeks). The baby hasn't been cooperating with us when we ask it for information (like when we try to do an ultrasound and it flips over on its tummy :) so I'm not about to ask it when it's coming out. The due date is April 9th.

I thought WWVH also had BCD data a couple times an hour? Or has that been
stopped along with the Omega navigation beacons?

Is there no VLF facility in Hawaii comparable to WWVB?

They don't use WWV or WWVH. They use WWVB 60 kHz out of Fort Collins.

The data sent on 60 kHz by WWVB isn't transmitted by WWVH. Here's a
chart of the coverage areas of WWVB and it looks like it has a decent
chance of being received in KH6-land at certain hours, like 0800 UTC.

WWVH is the 2.5, 5, 10, 15, and 20 MHz voice and data transmitter, it's on
exactly the same freq as WWV in Ft Collins. If you listen, there's a
silence before the guy on WWV speaks, that's for the lady from WWVH to talk
first. (very polite :)

The clocks use WWVB which is a 60 khz signal.
Interference from LuaLuaLei may make that impossible to pick up.
There also used to be a Loran transmitter around 100kHz IIRC, on the north
shore of Oahu, but they may have taken that down now.

Hi Mike:

Gave it a quick listen and liked your music selection. The good old WABC jimgles reminded me of many, many hours spent listening to 770 at night in Southwestern Ontario during the 60's when WABC's signal was always exceptionally strong. Those nights spent listening to Bruce Morrow and Scott Muni really gave me "The Radio Disease."

Unfortunately, despite having DSL, there were numerous "loss of signal" periods due to buffering.

Best wishes on your project.

Lee Smith

Yup, that's it. WELW ran (and may still be running) spots for a
while--in fact, what I am about to mention also appears on their web
site, welw.com--in which they made a point of the fact that WMJI plays
only "300 'safe' tracks", while WELW plays every (?) song which used
to be "top 40" on radio from the '50s through the '80s.

>
I don't know if WMJI has a better signal now or not. I moved to Fairport Harbor over four years ago from Wickliffe; I had to get a special amplified FM antenna for my stereo just to hear some of the Cleveland stations noise-free, and even at that I cannot hear certain stations, such as Mix 106.5, very well. (TV reception here in my apartment is so bad I must have cable to get decent signals. I do not get channel 3 at all on an antenna, and the other two VHF stations are fair to downright poor. Ironically, however, the UHF stations, all but WVIZ [PBS] channel 25, are watchable with good to excellent color pictures. I like having cable, however, because it gives me better reception, more stations to watch, and the fact that I have two PBS stations on the cable here (WVIZ, of course, in Cleveland, plus WEAO 49 in Akron) which allow me to watch certain shows an hour apart (like the NewsHour, Charlie Rose, et al.)

Are Cleveland's FM stations' signal patterns meant to cover the area east of Mentor, including Painesville, Fairport and environs? I would think, noting that none of the Cleveland stations mention Perry, Painesville, etc. very often in their commercials, they probably think this area is a never-never land, shut off from greater Cleveland by 35 miles. I grant you, the distance is a factor, but I still wonder why central and eastern Lake County aren't mentioned often in the commercials broadcast by Cleveland stations.

> So Jeff, how's Fairport? I used to be your neighbor - lived in Mentor on
> the Lake until last July. (Lived in Painesville for a while, too.)

Aside from the radio/TV reception problems (I am also a ham radio operator and have problems getting my radios to work, as I must use indoor antennas), I like Fairport Harbor a lot. When I was a kid growing up in Wickliffe, I used to dream of the day when I'd live in a small town like this; now that I'm grown up(I'm almost 48 years old), I am here, and I like it. Took me my entire first year here just to

get settled in my apartment, and another year or two to get used to living in a small town. However, it was all worth it. As I said, I like living here now and plan to stay here quite a while.

Good luck and very kind regards,

Jeff Strieble, WB8NHV (mailto: jeffhs@ameritech.net)
Fairport Harbor, Ohio

We don't use mic processing at any of our classical stations; the only processing is on the program feed as a whole, just before it goes to the transmitter.

BTW, I really love the Inovonics Omega FM.

How in the hell can the CLOCK detector tell any difference between
the time signal from WWV or WWVH. They are both on exact same
frequecies, the time tick is identical on both !!!!
Kokomo Joe
WWVH on Kauai has a consistantly strong signal. Albeit at times
is totally off the air several times in any given month.

702. HD Radio: first impression

Newsgroup: rec.radio.broadcasting
Date: 2004-03-18 18:22:18 UTC
From: umarc <umarc@hippogryph.com>
Message-ID: <c3cpcq$40j$1@xuxa.iecc.com>
Source record: 5742

I finally got to hear HD Radio (a.k.a. IBOC) on several Boston FM's Saturday night (but not any AM's since it was night). My observations:

1. HD Radio does not sound appreciably better than FM.

2. On some of the stations there was a "gritty" quality to the sound reminiscent of an MP3 Internet stream. To be fair, this could have been the result of cascading HD Radio with an STL or digital audio storage system employing something like MPEG or apt-X compression, and not something inherent in HD Radio itself.

3. HD Radio does not appear to extend a station's coverage. On the fringe of one station's coverage, where it could be heard in analog FM imperfectly, the HD Radio was generally not audible at all. We estimated that the effective range of the HD Radio signal is 90 to 95 percent of that of the analog FM.

4. The Kenwood receiver seems to mute in digital mode if there is another signal on an adjacent channel.

5. It also mutes in the presence of nearby FM transmitter sites.

6. In analog mode, the digital sidebands of a station running HD Radio can be heard as white noise. It is not yet possible to guess how much interference they may cause because only a few stations are running HD Radio yet.

7. The scrolling text display some stations were running may be a considerable distraction to drivers.

After hearing some glowing reviews, I was prepared to hear something approaching the sound of a CD and to want to push to put it on our stations. Instead, my friends and I were asking ourselves why anyone would want to pay $75,000 for it.

However, I am still reserving judgment. One night of listening on one radio isn't enough; I want to hear it on several different radios on a wider variety of stations, under different reception scenarios. I'm particularly interested in the effect of adjacent-channel interference.

Possibly some of it can be attributed to the choice of mics, the Shure SM7
has great 'presence' when used up close. Not boomy, just in your face
presence. Nice mic, wish I could justify owning one.

If the signal format is *exactly* identical to WWV it has a continuous
time signal being sent as a 100 Hz tone at 1 bps. If you can't hear
it on your radio (because of "comm grade" headphone or speaker or
ears), you can use skysweeper in free demo mode and see the bits clear
as day in the waterfall display.

Hi,
How does HD radio work? I'm an equipment designer (remote control
equipment) from Italy, we don't have it here. Never even heard about it! Is
it Digital? Modulation CODFM? what is the bandwith? Here in Italy we have
DAB... do you have that in the US?
thanks,
Mario.

That was a Navy transmitter, not NIST. I was stationed at Lualualei
for almost two years in the mid '70s. I wonder if it is still on the
air now that they have switched most of their circuits to satellite.

# 709. DX test Results

Newsgroup: rec.radio.broadcasting
Date: 2004-03-19 16:28:10 UTC
From: ircamember@ircaonline.org
Message-ID: <c3f72q$ik2$1@xuxa.iecc.com>
Source record: 5603
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Here's the results of the most recent DX tests that have been received here:

Sunday, March 14, 2004 - KEVA-1240, Evanston, WY tested 1:00-2:00am MST:

This was a test heard mainly by those in the Western US and Canada, though not everyone in the West heard it. It was mentioned by many that the code for this test cut thru this crowded local channel especially well. Nigel Pimblett of Medicine Hat, AB and Nick Hall-Patch of Victoria, BC as well as Albert Lehr of Livermore, CA were some that mentioned the code cutting thru specifically. Also hearing the test were Patrick Martin of Seaside, OR, Mike Sanburn of Bellflower, CA, Kevin Redding of Mesa, AZ, and Don Kaskey of San Francisco, CA. Robert Wien in Azusa, CA also heard the test, but as he mentioned, it was rather weak. And Tim Hall of Chula Vista, CA and Gerry Thomas of Niceville, FL both reported hearing a jumble on 1240 kHz and were uncertain if the code they heard came from KEVA.

And several DXers, myself included, tried for the test and didn't hear it - for instance, Vaughn Martin of Helena, MT and R.C. Watts of Louisville, KY both mentioned that they had locals on 1240 that they were unable to null. Bruce Portzer in Seattle, WA, Martin Foltz in Mission Viejo, CA, Bill S. in Omaha, NE, and John West in Dallas, TX all tried for the test with no luck.

Sunday, March 14, 2004 - WTOP-1500, Wahington, DC tested 12:00-1:00am EST:

This test was heard mainly in the Eastern US and Canada. It ran at their full 50000w, on their day pattern, and 2 announcements concerning the DX test were made. And there were certainly plenty of DXers listening for the test - those that heard the test included:

John Fisher - North Chalmsford, MA
Mike Brooker - Toronto, ON
Adam Myrow - Memphis, TN
Andrew Lisowski - Springfield, VA
Gerry Bishop - Niceville, FL
Ron Gitscher - Palm Coast, FL
R. C. Watts - Louisville, KY
Patrick Rady - Ann Arbor, MI
Mike Hardester - Jacksonville, NC
Paul Smith - Sarasota, FL
Willis Monk - Old Fort, TN
Steve Francis - Alcoa, TN
Les Rayburn - Helena (near Birmingham), AL

Nick Hall-Patch in Victoria, BC wasn't sure if it was WTOP's code he heard. Several people mentioned they tried for the test with no success - many heard

only a local or KSTP, or in my case, a station with SS. These included:

Patrick Martin - Seaside, OR
Chuck Boehnke - Keaau, HI
Niggel Pimblett - Medicine Hat, AB
Vaughn Martin - Helena, MT
Mike Sanburn - Bellflower, CA
Tim Hall - Chula Vista, CA
Craig B. - Denver, CO
Bill S. - Omaha, NE
Kevin Redding - Mesa, AZ
Robert Wien - Azusa, CA
Patrick Griffith - Westminster (near Denver), CO
Lynn Hollerman - Lafayette, LA

As a final note for this test, WTOP engineer Ken Sleeman asks that all QSL-related e-mail be directed to him at ksleeman@moremusic104.com.

That's all for now...

Lynn.

Once again, the clock the individual wants plans for uses the signal from WWVB in Ft. Collins, Colorado on 60 kHz.

# 712. 6th Annual East Coast vs. West Coast Oldies Show online at Rock-it Radio

Newsgroup: rec.radio.broadcasting
Date: 2004-03-19 16:29:22 UTC
From: rockitradio@aol.com
Message-ID: <c3f752$iv9$1@xuxa.iecc.com>
Source record: 5602

==========
6th Annual East Coast vs. West Coast Battle on the
Memory Lane Show in Rock-it Radio #901

It's time for the Sixth Annual East/West battle on THE MEMORY LANE SHOW. East Coast dj Bill Green joins our Lane Quigley in Studio B in the latest bicoastal skirmish for musical supremacy. Check it out at Rockitradio Show #901

Listeners are asked to vote, round-by-round, on their favorites. You can "copy and paste" the ballot below into an email, mark your choices, and send directly to Lane in Studio B at this email address: MemoryLaneShow@aol.com . Five lucky listeners will be selected at random to receive a CD compliments of Rock-it Radio of this show plus, there choice of actual vintage radio broadcasts of the 50's and early 60's from the Rock-it Radio Music Store. at: http://www.palmsradio.com/store.html

To tune in go to our archived show page at:
http://www.palmsradio.com/rockittext.htm
and click to show #901 to listen... the show will remain online for the entire month of March. Real Media Player is required to listen to Rock-it Radio programs.

Here's the playlist/ballot:(go ahead and cut and paste and send your ballot to memorylaneshow@aol.com )

ROUND ONE: THEY DIED TRAGICALLY
___EAST: Soul Twist - King Curtis 1962
___WEST: Bonie Maronie - Larry Williams 1958

ROUND TWO: #1 IN 1950, LET'S DO IT AGAIN
___EAST: Music Music Music - The Sensations 1961
___WEST: Harbor Lights - The Platters 1960

ROUND THREE: BACK TO THE BEGINNING
___EAST: It'S Too Soon To Know - The Orioles 1948
___WEST: The Honeydripper - Joe Liggins 1945

ROUND FOUR: SOUNDALIKES? BLAME THE PRODUCERS
___EAST: Be My Girl - The Four Evers 1964
___WEST: I Live For The Sun - The Sunrays 1965

ROUND FIVE: KATHY, YOUR ROOMMATES ARE INNOCENT
___EAST: Please Love Me Forever - Cathy Jean & The Roommates 1961
___WEST: A Thousand Stars - Kathy Young & The Innocents 1960

ROUND SIX: THE JOY OF SAX
___EAST: Back Slop - Baby Ray & The Trini-Dads 1961
___WEST: All Night Long - Joe Houston 1954

ROUND SEVEN: GUYS UP FRONT, GALS IN THE BACK
___EAST: It's Almost Tomorrow - The Dream Weavers 1955
___WEST: Come Softly To Me - The Fleetwoods 1959

ROUND EIGHT: SOCIAL COMMENTARY
___EAST: Deep In The Heart of Harlem - Clyde McPhatter 1964
___WEST: A Change Is Gonna Come - Sam Cooke 1965

ROUND NINE: FEATURING THE BACK-UP-ETTES
___EAST: (Night Time Is) The Right Time - Ray Charles 1959
___WEST: A Fool In Love - Ike & Tina Turner 1961

ROUND TEN: ALTERNATIVE ROCK
___EAST: Funny (Alternate Take) - Maxine Brown 1961
___WEST: Let's Get Together (Alternate take of "C'mon Everybody") -
Eddie Cochran 1959

ROUND ELEVEN: CLASSICS
___EAST: In The Still of The Night - The Five Satins 1956
___WEST: Earth Angel - The Penguins 1954

So folks get those ballots in and we will have the results in Early April and will post them here in the Rock-it Radio newsletter. Also, if you have any comments on the show or requests feel free to e mail Lane at: Memorylaneshow@aol.com

And don't forget to check out the Rock-it Radio store for your home of actual 50's Radio Broadcasts including the likes of Allan Freed, Mad Daddy Pete Myers, Bill Balance plus all the music of that era the commercials and news broadcasts of that day. At http://www.palmsradio.com/store.html

## 713. DX tests Summary

Newsgroup: rec.radio.broadcasting

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Sunday, March 21, 2004 - KEVA-1240, Evanston, WY 1:00-2:00 am MST (3:00-4:00 am EST).

Monday, March 29, 2004 - WXHL-1550, Elkton, MD 12:01-1:00 am EST.
E-mail:d_oetting@hotmail.com
Phone:410-398-3883

Thursday, April 1, 2004 - WTBQ-1110, Warwick, NY 5:15-6:00am EST.
WWW: http://www.wtbq.com

Sunday, April 11, 2004 - WNNR-970, Jacksonville, FL 12:00-1:00 am EST.
E-mail:wgsr1570@nrcdxas.org

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

MMMMM.... Charlie Rose. :)

Well, first, as Mike Ward correctly pointed out, most TV and radio transmitters are in Parma. The big exception was WKNR 1220 which was next to the studio in Broadview Heights and pointed *directly* into downtown Cleveland so you would have had problems receiving it in Fairport anyhow. (I'm not sure what they're doing now under Salem's ownership, but I'm guessing that they are still using the same, extremely directional, pattern.)

Oh yeah, and Z107.9 which can be heard at Allegheny College in Meadville, PA. :) Their transmitter is in Geauga County (at the intersection of Sperry Road and Kinsman Road).

I think the *other* issue is the terrain in Fairport. It's extremely hilly there. Do you live off Second Street or High Street? Or do you live further out?

> Are Cleveland's FM stations' signal patterns meant to cover the area
> east of Mentor, including Painesville, Fairport and environs? I would

> miles. I grant you, the distance is a factor, but I still wonder why
> central and eastern Lake County aren't mentioned often in the
> commercials broadcast by Cleveland stations.

Because Parma is the best place to put transmitters, and therefore anything east of Mentor is a rimshot for the typical Cleveland station.

Fear not, young trooper! You do have a choice. Clear Channel operates a bunch of stations in Ashtabula; you have Country 104.7 in Geneva and WATJ in Chardon and WBKC in Painesville, all locally owned... between those stations you actually have a decent selection of Stuff (adult contemporary, country, talk, classic rock, whatever weird hybrid format Star 97.1 runs...)

I used to listen to 102 Zoo a lot, primarily because I enjoy listening to their morning team. They seem to focus more on Lake County than any of the Cleveland stations do.

I hope at least some of this information is useful to you.

PS. If it makes you feel any better, I live 90 miles northeast of the closest media market (Los Angeles). The High Desert has exactly one TV station, KHIZ TV 64. All of the LA stations have repeaters up here, but given how hilly the terrain is (we're in a hilly area and surrounded on two sides by mountains), I wouldn't try to do without cable either. The area is, however, big enough to sustain a decent choice of radio stations, some from "down the hill" and some here. I was actually quite shocked to find out that Infinity owns stations in this rural area. Clear Channel I can understand, but Infinity....? (no need to respond to that last comment, it's been responded to previously :)

As far as I know, WHK/1220 is still on the same pattern. It's what
causes the station to become a rumor near Medina at night.

Another new "big exception" in the Cleveland market is WAKS/96.5 "Kiss
FM", the Akron market move-in once known as WKDD (the latter, of
course, now at 98.1 Canton). They nudged the WAKS tower site up just
north of the Cuyahoga Co./Summit Co. border in Brecksville, just off
Rt. 21 near the Turnpike. The old WKDD/96.5 already had fairly decent
coverage in the Cleveland market, but this move was similar to CC
moving the new WKDD/98.1 facility up closer to Akron.

As far as the OP goes - it looks like 96.5 is probably shaky where he
is, too, at least according to the usual "for entertainment only" maps
at Radio-Locator.com:

http://www.radio-locator.com/cgi-bin/pat?call=WAKS&service=FM&status=L&hours=U

He probably should still be able to hear "Kiss FM" with a decent
antenna. (And he should plug in a few Cleveland stations into that
Web site's search engine to get an idea of what he's dealing with...)

Oh, on a semi-related note, the CC Akron/Canton stations are moving
into a new facility in Jackson Twp. (North Canton) area...just off the
I-77/Portage St. exit north of Belden Village Mall, and just south of
the Akron/Canton Airport. WKDD/98.1 made the move Friday, and
WHLO/640 and WTOU/1350 are supposed to join them at the end of the
month.

Is WBKC/1460 still running a WCLV/104.9 Lorain simulcast after morning
drive (and outside of Indians games)?

>I used to listen to 102 Zoo a lot, primarily because I enjoy listening to their
>morning team. They seem to focus more on Lake County than any of the Cleveland

And at times, almost more than they focus on Ashtabula and environs.
That's probably because there's a lot more money in Lake County!

Mike

I have one of the small desk clocks that synchronizes to WWVB at
night. It auto-adjusts the internal crystal (or says it does)
to keep itself going during the day. I've found that it maintains
accuracy very well: certainly good enough for anything short of
atomic physics.

I live in the NorthEastern U.S., where the signal is relatively weak
(look at the maps at the URL a previous poster supplied) and don't
have any significant trouble with it. I looked at the NIST web
site, and I think they said something about boosting the power of
the WWVB signal: so if you had trouble with it before, it might
be worth trying again.

Yes, not to belabor the subjct, but WWVB is 60Khz,
while WWV, & WWVH are 2.5.....20Mhz.

There is no voice with WWVB. Howver, for calibration purposes
WWVB is more stable, and accurate.

No, the second ticks are 5 cycles of 1000 Hz on WWV and 6 cycles of
1200 Hz on WWVH.

We don't have DAB because the National Association of Broadcasters
lobbied against it several years ago when they realized it would give
all stations in a market essentially the same coverage and possibly
allow new competitors into the game.

They do have DAB in Canada, but we have IBOC ("in-band, on-channel"),
or "HD Radio" as it has been recently rebranded. HD Radio allows a
station on the AM or FM bands to transmit a digital signal along with
the conventional analog signal. The catch is that the maximum bit
rate permitted by HD Radio is 96 kbps on the FM band and about 36 kbps
on AM. By comparison, DAB allows up to 256 kbps.

Start with 2dB lift at 10kHz and 3.5kHz, and take about 2dB out at 400Hz. With a reasonable microphone, this is a very good starting point. Depending on room or aircon rumble you might want to use a high pass filter set at 60-90Hz, and this can be a little higher with a female voice if needed.
Cheers, Rob.

I whole-heartedly agree with you on your findings "Umarc". It really has nothing to offer the local **FM** listener. HOWEVER....in the Southern California market it would kick ass on the "AM" market with a vengence.A lot of the local AM outlets have sold out to the hispanic market because AM radio sounds so bad for music.Considering how much better AM IBOC sounds than analog, and the fact that the mexican government thinks it's cool to fire up 10Khz away from US stations..IBOC is just what the renagade beaner-blasters deserve.
I would like to see such stations like KNX,KFWB,KFI,KABC-AM (and some of the San Diego stations) push the IBOC music service, the data services and re-claim the 535-1710Khz band for use in the US of A.......Eddie

We were there at the same time. 69-87 for me.

I once had to put in a buried seismic alarm system right across the street
from that transmitter.
Took some interesting filtering on the signal lines, not to mention three
weeks to ditch through the coral.

# 727. For sale: AM radio station construction permit for sale. In Georgia.

Newsgroup: rec.radio.broadcasting
Date: 2004-03-20 23:00:26 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c3iiea$nt8$1@xuxa.iecc.com>
Source record: 5620

For sale:

(The "Radio Crazy" is baaaaakkkk but this time he is selling something and NOT looking for investors.)

AM construction permit for Warner Robins, GA. The 8th largest city in the state. Has the largest civilian employer in the state, Robins Air Force base.

I believe it is the fastest growing city in Georgia and the present population is about 53,000. Will probably reach 100,00 by the end of this decade.

The CP was (will be as it is a "shoe-in")granted as a result of my filing during the 1/26 to 1/30/2004 filing window and was unopposed.

It is for 1600 KHz, fulltime, 1 KW days, 250 watts nights.

I will sell for $50,000. My parole officer says I am not allowed to say this but I will. If you are a J_W or a B___K it is $100,000. If you are a Muslim it is $200,000! My parole officer is: Mr. Larson E. Rapp, c/o of ZingZing prison, Ossingstink, NY 12345. (I know, dude! I am not politically correct....so sue me!)

Only those fully identifying themselves can deal. I will need you SS number, age, race, religion, do you go to church? Do you mow your lawn? Medical records? Bank accounts. If you don't like, wait for the next FCC filing window probably circa 2054!!!!

I am NOT a crook! I am not an agent, shill, etc. This time I AM an owner!

This CP is real!!! This CP is real!!

Call (478)741-1710 in Macon, GA

This CP is real!!! This CP is real!!

73,

Meyer Gottesman, W6GIV
aka "Radio Crazy"
aka Moron Gottesman

PS, some of the nasty stuff is satire only and no offense is intended. If you really want the CP, you can live with that. It is on the FCC website for those "flamers" that think I am off the wall!

I guess you could say "HD Radio" is the DAB system in the United States.
It is (very!) technically incompatible with the Eureka DAB system used
in Europe. http://www.ibiquity.com .

HD Radio is also known as "IBOC" - "In Band, On Channel". It places
digital carriers in the outer edges of the existing analog signal. (and
for MW IBOC, in the adjacent channels) It offers a "hybrid mode" in
which DAB and analog can be broadcast on the same frequency at the same
time.

All U.S. stations are currently allowed to begin DAB broadcasts at any
time, upon notifying the government. MW stations are only allowed to
broadcast DAB during the day, though nighttime authorization has been
requested. Very few stations are actually using DAB at this time - my
guess would be roughly 50 (most of them VHF/FM) throughout the country.

It is (IMHO) specifically designed to maintain the relative coverage
areas of different stations. (unlike, for example, the Eureka DAB in
Canada where all Montreal DAB stations have equal coverage, regardless
of the coverage of their associated analog stations)

Actually, there are fewer Spanish AMs than there have ever been in the last
20 years. Only 1020, 1330, 830 and a simulcast of 1330 on 1220 are Spanish.
Gone are 1430, 1580, 1480, 1090, 1540, 900 and several others that were
intermittently Spanish (like 1500, 1510, 670, 1190, etc.)

Only one of the remaining ones is doing music (country standards) while the
rest are talk.

A lower percentage of Hispanics listen to AM than non-Hispanics.

My limited experience with AM IBOC is that it seems to sound worse than the better quality AM analogue signals, and of course it makes it impossible to put out a wideband analogue signal. It's also going to be much more subject to adjacent channel interference from Mexico.

I wish I could say IBOC would be the saviour of AM, because AM certainly could use one. I could at least believe IBOC will result in better quality sound for the average listener on a cheap car radio listening in the daytime, and you can argue that this is where the profit is.

>I would like to see such stations like KNX,KFWB,KFI,KABC-AM (and some of the
>San Diego stations) push the IBOC music service, the data services and

I'd be interested to see them try. And I will say that stations that try IBOC are forced to clean up their antenna system and deal with group delay problems, which will certainly benefit them if they should decide to move back to wideband analogue operation.

Oddly enough, some of these ended up doing (or will end up doing)
English-language talk or sports:

1580 - KBLA/Santa Monica, the L.A. affiliate of the new "Air America"
liberal radio network
1540 - KMPC, the Sporting News Radio O&O now sporting the historic 710
calls
1090 - XEPRS out of Baja California, now doing English-language sports
talk aimed at San Diego as "The Mighty 1090" (after the move of 690
Tijuana to a simulcast of KXTA/1150).

Mike

Nahhh, I can confirm from living in the area (not 20 minutes away from him)
that Kiss has a good signal in northwest and north central Lake. Keep in mind,
however, that I haven't lived in Ohio since the end of last June.

> Is WBKC/1460 still running a WCLV/104.9 Lorain simulcast after morning
> drive (and outside of Indians games)?

As far as I know. Listen to 104.9 to find out - at the top of the hour
they'll ID WCLV *and* WBKC.

> And at times, almost more than they focus on Ashtabula and environs.
> That's probably because there's a lot more money in Lake County!

Ehhh. Most of their loyal sponsors are in Ashtabula and vicinity. The only
sponsor that runs spots with any frequency on 102 Zoo out of Lake is the
Classic Auto Group, which is all over the map - Wickliffe, Willoughby,

Mentor and Painesville -- and, of course, they have a store in Madison, the last town on US 20 before you hit the Ashtabula County line.

It's interesting to hear their Cleveland ads which feature lavish production values and Founder/President Jim Brown's booming voice, and then hear their Ashtabula ads that.... don't. (The Ashtabula ads sound fine; they just aren't as fancy.)

They are ocasionally on ebay. Then there is the
venerable Heathkit clock, which decoded WWV. I had
a Heathkit for a while, but sold it. It was really
not very stable compared to WWVB. I have several
WWVB clocks, and receivers. Both are commercial grade,
and very stable. The consumer clocks are very accurate,
but not good for calibration.

Unfortunately, in my observation, IBOC degrades the analog signal noticeably, even on a narrowband car radio.. The problem with AM IBOC is not only the quality of the digital sound (yes, I know, there's supposed to be a new codec that's better, but I've never heard AM IBOC that sounded anything but terrible). It also degrades the listening experience for everyone listening in analog, which for the foreseeable future means everyone, period.

There is also a serious adjacent-channel interference problem which does affect stations outside the coverage area of an AM station transmitting IBOC. That is why it is not permitted at night, but the problem also exists with daytime operation.

>
>>I would like to see such stations like KNX,KFWB,KFI,KABC-AM (and some of the

IBOC may be a step to eliminating AM as an aural service, with the allocations eventually used only for datacasting. Whether or not that is the plan, it is the likely result. IMHO, IBOC will assure the end of AM radio as we know it. Why anyone in the broadcasting industry supports it as the "savior of AM" is utterly beyond my comprehension. I find every argument advanced for it to be fallacious. If this is what's supposed to save AM, then AM can't, and maybe shouldn't, be saved.

And I once interviewed for an off-air job at WKNR/1220 before it
launched as a sports station. My big problem? My source neglected to
indicate that WKNR would be a sports station...meaning all my talk
about my news/talk radio experience was wasted.

Oh, not to mention the odd fact that the WKNR management at the time
(in the Cablevision days) was insistent that everyone who worked there
actually lived in the Cleveland market, in specific, Cuyahoga County.
One of the interview questions was "would you move to the Cleveland
area?", despite the fact I was roughly a half-hour drive from there
from the Akron area. Heck, I was closer to them than someone in, say,
Lakewood, and certainly well within 1220's strong signal.

It didn't make any sense to me...for one, since it was signing on as a
sports station, the Akron/Canton area is clearly within the market
area for the major pro sports teams in Cleveland.

My response - no sports radio experience aside - may have been what
doomed me...I basically said "huh, what do you mean?"

>96.5 had decent coverage in Mentor and Painesville back when it was WKDD, but
>since moving I do believe the coverage has gone from decent to solid...

It looks like they may have been able to squeeze a bit more out of
96.5 with the move. 98.1 couldn't do much, since it was kinda clamped
in, with the move to Hartville...their pattern pre/post Hartville was
almost identical. Their aim was to get closer to Akron and provide
less of a "picket fence" signal. 96.5 seems to have actually picked
up some real estate with the move to Brecksville.

>Ehhh. Most of their loyal sponsors are in Ashtabula and vicinity. The only

As far as I know, WHK/1220 is still on the same pattern. It's what causes the station to become a rumor near Medina at night.
>>

WKNR was a legacy rock-'n'-roll call from Detroit/East Lansing (with WKFR ... both then owned by Knorr Foods, hence W-KNR).

The 1220 pattern was cast into concrete in 1938 with NARBA, finally implemented in 1941 as WGAR.

Carl Smith designed the array, and it has remained substantially the same (although the "six wire" line, the phasor and the center tower have all been replaced).

It's not *that* directional.

The entire U.S.-Mexican border is protected, as is the primary service area of first adjacent-channel WCAU.

Implemented by Smith using only five towers, the signal is intended to serve Cleveland and Akron, plus Canton, all of Ohio.

About 250 kW towards Cleveland. About one-half that towards Akron.

Grandfathered by NARBA as DA-1, even though DA-1 is no longer required under "Rio" rules.

A better pattern is possible, using more towers, but protection of Mexico, DF, and Philadelphia remain as absolute constraints. Plus, now, the many 1220s which are Class Bs, operating with very low, but conforming power.

At best, one "throw-away" mimima could be eliminated, that minima being essentially entirely over Lake Erie, and a new pattern might require an entirely new array concept, and most probably six to eight towers.

Given Salem's parsimoniousness, I seriously doubt that a megabuck, give-or-take, would be spent on this station to give it a more desirable pattern.

One could assume that they turned off the stereo in order to get better coverage. RDS could have been turned off to get back the few-percent of modulation it consumes.

WWZZ is a WAY-out rimshot, and has coverage problems in DC and northern suburbs. Turning off the stereo gives them quite a few more dB signal to noise ratio in poor signal areas.

WWVZ is only Class A, and was bought to try to help in the northwestern DC suburbs. But it's way out on the hill west of Frederick, MD, so every little bit of signal improvement helps - thus turn off stereo.

And don't think that I'm anti-stereo, after all I put on the first FM stereo station in the DC area - 102.3 Bethesda. We suffered severe coverage problems due to being just Class A, and compounded by being stereo. Rules have changed and 102.3 now has 12-times the power we had, and a much better antenna location at American U. They cover very well these days - in stereo.

Long ago I characterized the present FM-stereo system as being the best mono system among the various proposed stereo systems. By that I meant that it degrades the mono coverage less than most of the other proposed stereo systems. But it takes a beating in stereo coverage because of this.

Hmm...I know that the "reception issue" has plagued WWZZ for a long time and I knew that improved reception is what drove Bonneville to turn off the stereo on the 107.7 signal for WTOP-FM. I guess I just didn't realize that the signal improvements were *that* significant. I hope they haven't deluded themselves into blaming the signal rather than the format for their current ratings situation...

I keep hearing rumors that Bonneville is looking for a broadcast signal for their Federal News Radio brand and I suppose I was speculating that they were tweaking "104" in preparation. It was just a thought.

I would think that the "savior of AM" would be to provide
programming that people would want to listen to and that can be
received well in most of one's home market.

But aside from that, the FCC needs to do a little "birth control" --
or, more precisely, "euthanasia" -- by deleting operations who
facilities are clearly too marginal to provide aural service to a
majority of any given station's market area. The FCC, obviously,
would rather not crack this particular nut -- it's easier to focus
on boobies than it is on nuts-and-bolts infrastructure -- and has
backed off the few cases where it has tried to reduce interference
on the dial: for example, how many stations that "moved" to the
expanded band actually have given up their previous facilities? Not many.

AM-Stereo, a previous savior, didn't kill AM, so now we have IBOC.

> I would think that the "savior of AM" would be to provide

No, the FCC has a better solution - the recently-closed window which
gathered over 1500 applications for new stations and major changes.

I recall years ago there was an effort to make it easier to buy and turn off
stations. The dreamers said that this would drive up the price of
stations - making them out of reach of new minority owners. The "big boys"
quickly figured that (already owning the big stations) they'd rather split
the ad pie with lots of struggling little stations that didn't have enough
ad income to compete, rather than a smaller number of stations each of which
got enough of the pie to be "dangerous". So the big station owners sided
with the dreamers and we have more and more uneconomic stations interfering
with each other.

I know of one x-band station that gave up its old channel. Since they also
have FM I wonder how long before they turn in the x-band license. Maybe the
PC in the closet which runs the AM doesn't cost enough to matter. Going
from 3 towers to one must save money.

## 750. Re: HD Radio: first impression

Newsgroup: rec.radio.broadcasting

Source record: 5640

Doug Smith W9WI <w9wi@invalid.invalid> had written:

| All U.S. stations are currently allowed to begin DAB broadcasts at any
| time, upon notifying the government. MW stations are only allowed to
| broadcast DAB during the day, though nighttime authorization has been
| requested. Very few stations are actually using DAB at this time - my
| guess would be roughly 50 (most of them VHF/FM) throughout the country.

In the San Francisco area, there are five, all FM:
KZBR, KOIT-FM, KDFC, KFOG, KSAN.

None observed on AM so far, but given that Susquehanna owns the latter
two stations listed above as well as KNBR(AM) and KTCT(AM), I think
it might be merely a matter of time.

Bonneville, the other owner represented above, only owns one San
Francisco AM, KOIT, which simulcasts the FM 100%. One suspects that
Bonneville is unlikely to invest too much into that signal (which is ND
fulltime).

On FM, the IBOC sideband noise that is generated is noticeable on a
receiver of any but the worst quality. The KSAN IBOC signal (licensed
frequency of 107.7 MHz) is blamed by some for blocking South Bay reception
of Monterey Bay-area station KPIG (107.5 MHz).

I rather doubt that WWZZ is a good candidate for Federal News Radio. FM stations, even that one, are worth too much. AM has building penetration problems, but 1120 might be a tolerable choice - but it may be having enough success with brokered time to cost too much as well. Drive time coverage in the winter would be a problem for most AM stations.... except for 980 which must be terribly underperforming at present.

The biggest problem here - the Cleveland metro area has grown towards
the southwest, into parts of Medina County that are mostly in the null
of 1220's pattern.

This, presumably, is due to the protection of the Mexican operations
you note in your original message.

>>

Yes, and a change in site to accommodate the change in Cleveland's metro area would undoubtedly result in a severe ratcheting of the station's power. Perhaps to 25 kW.

Salem's "forced move" of its KFAX in S.F. would result in ratcheting to about 40 kW if Salem doesn't get a waiver. And, the move is well within the radius which is supposed to qualify an "in kind" move of an existing array. Salem is proposing retaining 50 kW, but with slight array parameter changes which somewhat mitigate the potential interference to several CP'd stations in Idaho and Nevada.

WOR met the same fate on its forced move, and its new pattern will provide better protection to a Canadian station which no longer exists (moved to FM), but remains "notified" on 710.

## 756. best architecture for a homebrewed single-station FM broadcast dx receiver?

Newsgroup: rec.radio.broadcasting
Date: 2004-03-23 17:19:41 UTC

a city I visit frequently -or more precisely, it's exurban outskirts - has only one mellow-Jazz FM-broadcast station, the only one for many hundreds of miles.

thus I have decided to build my own single-station hi-performance receiver to get the one station.

I know enough to know that ideally, the bulk of the gain, directionality, selectivity should be at the antenna itself. Or even more to the point, tower height. At least ideally. And hi-performance single FM channel yagi's are easily spec'd from a number of antenna houses. So that issue is not being placed on this table.

The rest of the gain budget is.

Let the discussions begin. For example, what approach do the known "name" receivers (Kloss Model One, GE Super Radio) use? can a homebrewer do better?
Which commercial house builds the best resonant chambers for the 108 Mhz frequency? Can be be done easily at home? how about the demodulation and audio portions?

European and Asian cellphones solved this problem a very long time ago. Look through the catalogs of Nokia, Sony/Ericsson, etc. You could probably dissect an asian cellphone to get at the audio switching circuitry and headphone drivers.

Ask around on the GSM cellphone groups.

Hi,

Please post a link to a Coast To Coast AM MP3 stream.
WGST use to have one but it switch over to a windows media format.

The MP3 streams are easier to access and has less overhead.

Thanks!

Phin

Building a good receiver of any kind is complex, if you really want
good specs. Very few people have been able to accomplish this at home.
Just for calibration, you will require the proper instruments and
skills.

A good FM receiver with the proper antenna will do it, as long as the
antenna can see over the horizon, and within your distance range there
are no other stations at the same frequency. There are also the
physical limitations to consider as well.

Since the range of an FM station is about 120 to 140 miles at the very
best with a good antenna, there may be allowance for other stations to
broadcast within a 150 mile radius. If there are other stations, these
may be difficult to tune out.

You would be best off with an antenna that is cut to the frequency you
want to recieve, it will have to be able to see over the horizon
enough to see the transmitter site, have the proper directivity, and
be very well impedance matched to the receiver.

All the high end FM tuners are designed to be able to use an external
antenna, using a 75 ohm coax type hookup.

Have you considered calling this station to see if they are on the
net, satellite service, or on your local cable TV service? Many of
these small stations are on the net, and broadcast streamed
programming. This way you can use your computer to listen to them. '

...

Exactly what will make it "hi-performance"? I'd like to get this nailed down early here. That is, it would really help to know answers to things like:

What distortion performance do you want to get? (Will you be able to deliver a clean enough signal from the antenna to get to the desired performance level?)

What will the level of the desired signal be at the receiver antenna terminals?

What will the strongest unwanted signals be: level and relative frequency?

What resources do you have available for design, construction and testing?

Will this receiver be in a fixed location, or do you want it to be easily portable? How much power can it draw?

Others may well think of questions to add, before we go off into the weeds with unproductive answers.

Cheers,
Tom

You need to look at your particular situation. It sounds like you are out in the desert. Is this the case? Are there other strong FM stations nearby? Any others close in frequency?

Sensitivity is relatively easy to come by. The "best" audiophile receivers are more about selectivity, which sounds like it might not be an issue in your case. There is a similar issue with antennas. Directionality is there more to combat multipath then it is to get gain. Is the terrain flat? If you are between a lot of buildings then nothing you do at the receiver will make up for what you don't do at the antenna.

You are right about needing to get your antenna high, but for a single, point to point circuit, there is such a thing as high enough. More won't help. But less will hurt dramatically.

The other big problem is getting the signal from the antenna to the radio. At FM frequencies, line losses are significant, as is noise pickup. If the signal is marginal, then you need to get an amplifier at the antenna. If what reaches the receiver is mostly noise then no amount of sensitivity at the receiver is going to help.

At any given frequency there is only a certain amount of sensitivity that you can use. At FM broadcast frequencies, that amount of sensitivity is easily obtainable these days. You can probably do "better" in terms of sensitivity by building something, but you wouldn't hear the station any better ... in fact, probably worse by having too much of a good thing.

An update on the KEVA-1240 test...

Due to a miscommunication, the KEVA-1240 test did NOT run as planned on 3/21/04; it will instead run on 3/28/04 - at the time it was originally scheduled for, 1-2am MST. The station regularly plays classic country music, and the DX test will have some voice and Morse code IDs mixed in.

Lynn.

## 767. Transmitter / Receiver question

Thought I posted a reply yesterday, but it doesn't appear to have made
it.

Before we head off into the weeds with all sorts of opinions, how
about some clarification? I'd be interested in answers to several
questions, and suspect others will add more.

o What sort of distortion levels and signal to noise ratio are you
wanting to achieve?

o What level of desired signal will you be able to deliver to the
receiver's input terminals? Will it be strong enough, and free enough
from multipath, to make the desired distortion and SNR practical?

o What levels and relative frequencies will strong potentially
interfering signals be? -- Let's hope there's nothing significant on
an adjacent channel, and nothing really big on alternate channels
(+/-400kHz).

o How skilled are you in RF and digital construction, and what tools
do you have available for design, construction and turn-on/alignment?

o Do you want the receiver to be portable and battery-powered, or can
it be relatively large and line/mains powered?

(o Why would you not just buy a good FM tuner, and perhaps just build
a preselector if alternate-channel stations were a problem?)

Cheers,
Tom

What is your budget?

You probably should look into cuing transmitters, as used for IFB to
newscasters and the like. Vega makes a very popular system.

You may also be able to use one of the assisted listening systems that
work on the 72 MHz band (not the infrared ones). This will be more wideband
and may be cheaper.

> I'm just adding nanau to the list of newsgroups here because I think this
> needs to be seen over there.

Alrighty then.

Why?

The original message was posted to *one* newsgroup (rec.radio.broadcasting) -
unless it was multiposted to other groups that I didn't catch. As far as the
URL is concerned, I post RRB submissions manually and don't typically bother
checking URLs. The subject matter of the CafePress site to which the original
URL forwards is NOT off-topic for rec.radio.broadcasting. I'll grant that it
doesn't seem to actually be anything besides a cheap effort to sell T-shirts,
but it wasn't off-topic.

What am I missing here?

# 778. Re: best architecture for a homebrewed single-station FM broadcast dx receiver?

Newsgroup: rec.radio.broadcasting
Date: 2004-03-25 21:36:29 UTC
From: Henry Kolesnik <kolesnik@sbcglobal.net>
Message-ID: <c3vjct$sr6$1@xuxa.iecc.com>
Source record: 5666
Cross-posted to: rec.radio.broadcasting,sci.electronics,rec.radio.amateur.homebrew

For about the last 15 years I have been listening to NPR at 89.5 MHz while riding my bike for an hour or two on nice days. There are several locations where many radios don't receive and lose the station and sometimes capture another close station. I've been buying used portables at garage sales for $10.00 or less and comparing their performance. So far I haven't found any of the Walkmans or Sports radios that are acceptable and to date the best has been a Sony ICF-34, much better than my Grundig Yacht Boy 400, but I can't risk it to try my Sony 2010. I've built and/or modified many radios and often thought about trying to make a better 89.5 radio but I don't think there's anyway I can beat the commercial jobs especially when I can get them for $10.00 or less. Generally I prefer not to use headphones and instead fasten the portable to my handlebars so I can hear the radio and local sounds. The radios take a pretty good beating but few have failed from the vibration or minor crashes.
In the past I've lived in somewhat remote locations where I couldn't get the stations I wanted and the best solution was a good antenna with directivity and gain as high up as you can get it! But I can't do that on my bike.
However if you come up with a good home brew solution please let me know.

I lived in the Albany, NY area for many years, back when there were not too many local FM stations there (that is, the 1970's and early 1980's). I used an audiophile FM tuner board and a roof-mount Yagi FM antenna. Most of the local stations were southwest of my home. In any other direction but the southwest, I regularly pulled in stations up to 120 miles away. More distant stations were hit and miss, depending on tropospheric bending, etc. If your area is not saturated with local stations, you should have no trouble with a similar arrangement.

## 782. KBOC

I am oging to implement a weather band receiver using a DSP chip.
Tunner is available. But i can not find too much information about
weather band. Could any one tell me the modulation method of weather
band and give me some useful link about the detail of weather band.

Thanks in advance

It's just wideband FM. If you can pick up FM broadcast, you can just
slide that LO up a few MHz and get weather band.

Weather Band is FM -- 162.55 and adjacent frequencies I believe.

Just follow the links on:
http://www.nws.noaa.gov/nwr/
I didn't see any technical data listed through a brief browsing, but I only looked for a couple of minutes. You could probably contact someone somewhere there and get any details of data transmission protocols you might want.

## 788. Re: Weather band receiver implementation?

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Sunday, March 28, 2004 - KEVA-1240, Evanston, WY 1:00-2:00 am MST (3:00-4:00 am EST).

Monday, March 29, 2004 - WXHL-1550, Elkton, MD 12:01-1:00 am EST.
E-mail:d_oetting@hotmail.com
Phone:410-398-3883

Thursday, April 1, 2004 - WTBQ-1110, Warwick, NY 5:15-6:00am EST.
WWW: http://www.wtbq.com

Sunday, April 11, 2004 - WNNR-970, Jacksonville, FL 12:00-1:00 am EST.
E-mail:wgsr1570@nrcdxas.org

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Pfft, that can't be it, I have family in northern New Jersey (just outside NYC) and there's nothing wrong with them. :)

Of course, southern NJ is a different matter altogether - my one memory of Camden, collected while driving between Philadelphia and Atlantic City, is not very pleasant. Mmm, actually, not sure whether it was Camden or Cherry Hill (it was 13 years ago), but the drive through whichever city it was was horrible; the place stunk. One would hope that they've cleaned things up by now...

Anyhow, I don't think that toxic fumes are necessarily to blame... this guy sounds like he has a lot of unrelated issues...

You were probably in Camden. What you likely smelled was the result of industrial pollution that has to this day not been adequately cleaned up. Of course if you were driving by Campbell Soup, no comment.

# 797. Rare 50's and 60's Radio Broadcasts for sale

Newsgroup: rec.radio.broadcasting
Date: 2004-03-28 05:38:56 UTC
From: rockitradio@aol.com
Message-ID: <c45odg$k8i$1@xuxa.iecc.com>

We just would like to remind you that we have broadcasts for sale of actual Radio shows of Top 40 Radio of the 1950's and 1960's. These shows include the music, ads and news and some even dedications from the broadcast of that day. Many of these broadcasts are quite rare and have been digitally remastered and placed on CD.
These shows go to continue and pay for the fees of our broadcasts and 100% Satisfaction is guaranteed.

We are busy continuously attempting to add more shows as time goes by and we invite you to check out our Rock-it Radio Music Store at:
http://www.palmsradio.com/store.html

Currently we have the following broadcasts for sale.

1. Alan Freed on WINS New York on 3/5/1955
2. Alan Freed on WABC New York on 11/5/1959
3. Ultra Rare Alan Freed Broadcasts - Series of 3 Rare Radio Broadcasts of the 1950's.
4. Mad Daddy Pete Myers at WJW in Cleveland -- November ?, 1958
5. Bill Balance on KFWB Los Angeles - 8/18/1959
6. Elliot Field on KFWB Los Angeles - 1/6/1961
7. Real Don Steele on KISN Portland, Oregon - 1/23/1964
8. Real Don Steele on KHJ Radio - Los Angeles - 1/21/1966
9. B. Mitchel Reed on KFWB Los Angeles -- 2/7/1963
10. Casey Kasem on KRLA Radio Los Angeles -- 5/27/1965
11. NEW - Classic Soul Radio -- featuring Jim Randolph at KGFJ Los Angeles on 4/28/1966; Herb Kent from WVOH in Chicago on 4/7/1970 &
Wolfman Jack!!! on XERB Rosarito, Mexico from Dec. 1966
12. Top 40 Countdown from 4BC Radio - Brisbane Australia from Nov. 1979

---> Coming later this week -- Legends of New York Radio of the 60's. featuring Murray the K and others.

*** Special Exclusive Broadcasts of Rock-it Radio ***

1. Hunter Hancock with Lane Quigley - After 32 years of Retirement Hunter Hancock comes in front of the Microphone and does a 90 minute show exclusively for Rock-it Radio. Features tons of 50's R&B tunes that he played back in the 50's for KGFJ in Los Angeles

2. Tribute to Johnny Cash -- Rock-it Radio show #764 Features Bennie Dingo playing a tribute to Johnny Cash on the morning of him passing away -- featuring primarily his Rockabilly SUN Record Recordings in Cash's early years.

If you would like to remember how Radio used to be in Top 40 Radio or would like to learn how Radio used to be, these shows are a blast to listen to just for the ads alone!

For a complete playlist on these shows you can check them out at:
http://www.palmsradio.com/store.html

Thank you for your support and all the best,

Bennie Dingo

## 798. best software for radio station

Newsgroup: rec.radio.broadcasting
Date: 2004-03-28 05:38:57 UTC
From: spyder@nor.com.au
Message-ID: <c45odh$k91$1@xuxa.iecc.com>
Source record: 5688

We are setting up a small narrowcast radio station in our town (Kyogle Australia) and are not sure the best software to buy. I've been looking at Raduga because it looks simple to use which is important because we will have a large group of opperatators who will not all be computer literate.

Any comment about this program or others we should consider?

Lewie

# 799. Amateur Radio Newsline™ Report 1389 – March 26, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-03-28 05:38:58 UTC
From: radionews@aol.com
Message-ID: <c45odi$k9o$1@xuxa.iecc.com>

**

THE BPL FIGHT: ART BELL W6OBB VS. BPL.

If it did not know before, a large portion of the American public is now =
keenly
aware of the danger that Broadband Over Powerline Internet access poses t=
o the
nation's emergency communications infrastructure. And you can thank radi=
o talk
show host Art Bell, W6OBB, and ARRL President Jim Haynie, W5JBP, for brin=
ging
it to everyone's attention. Amateur Radio Newsline's Mark Abramowicz, NT=
3V,
had an opportunity to speak with the internationally famous radio talker =
and
has the rest of the story:

--

>From the high desert in the great American Southwest, a call to arms has =
been
sounded.

>From his home base in Pahrump, Nevada, W6OBB - better known to millions o=
f
commercial radio listeners as Art Bell - has called on America to stand u=
p and
fight what he charges is the greatest threat to the nation's security -
Broadband Over Powerline.

Bell charges BPL will cripple the nation's emergency communications backb=
one -

striking at the heart of homeland security.

Bell picked up the charge against BPL during his radio show broadcast Sat=
urday,
March 20 in which he introduced ARRL President Jim Haynie, W5JBP to his
audience.

Haynie and Bell pointed out the BPL interference threat extends far beyon=
d the
amateur bands. Both Haynie and Bell warned that many police and fire comp=
anies,
federal disaster agencies and the FBI and the military would be rendered
helpless if BPL is rolled out across the nation.

Bell says he's especially worried about the potential of another major at=
tack
against the United States and what BPL would do to our nation's ability t=
o
communicate.

"The emergency communications, my God, aircraft, amateur radio, FEMA, any=
other
emergency agencies that are going to have to rely on HF communications," =
Bell
says.

"We certainly can't depend on satellites. As a matter of fact, if we shou=
ld get
into a conflict, some sort of major conflict the satellites will be the v=
ery
first thing that will go. And minus satellites for communications, we're
dependent on the good old-fashioned shortwave bands, VHF, UHF, the whole
schmear to keep our nation talking. And in a time of national emergency w=
e need
to be able to talk to each other."

Bell says he's appalled at the behavior of the Federal Communications
Commission. He says they're acting like cheerleaders instead of regulator=
s. He
charges corporate greed is driving BPL and ignoring the studies showing =
the
technology - as proposed on the HF bands - won't work without causing mas=
sive
interference.=20

"I've always had the deepest respect for the Federal Communications
Commission," he says. "However, I think in recent years, there've been a =
lot of
changes at the FCC that include the fact that there aren't so many engine=
ers at
the commission any longer, but there are a lot of bureaucrats."

Bell says he believed after reading the Federal Emergency Management Agen=
cy's
assessment of BPL that the findings would have been enough to shut it dow=
n.

"The FEMA filing was very strong," Bell says. "They essentially said, 'Lo=
ok,
our receivers and transmitters are not going to be able to function with =
BPL in
place.' And, they specified the power levels they would have to go to con=
tinue
to communicate and suggested the taxpayers can't, wouldn't be able to aff=
ord
such changes.

"So, with that kind of filing, frankly when it came out I thought BPL was=
dead.
Boy was I wrong!"

After doing more research, Bell says he decided to take the case to his
listeners. And he says the only way to do it is to point out the risk to =
their
safety.=20

"I don't think we're going to combat it by saying, 'Save ham radio." The =
public
doesn't care enough and I'm sorry to have to say that, but that's what I
believe," Bell says.=20

"I love ham radio. It's been my life. I've been a ham since I was 12. But=
the
greater, larger American public just doesn't care enough about ham radio.

"And if they think they can plug in their computer to the wall and have i=
nstant
internet, that's a more attractive idea to them than the guy down the blo=
ck
with a tower in the air."

Bell says his mission is clear: "I do a radio program on 500 radio statio=
ns
nationwide, including the top 50 markets in the U.S., " Bell says. "And I=
'm
going to do everything I can to drive this home as hard as I can that
communications, and certainly ham radio is part of that emergency
communications chain, there's no question about that.

"But emergency communications across the board are threatened by BPL."

Bell says all hams need to wake up and heed his call to action.

"We have to get to the larger media in America and, as hams, we have to m=
ake
the general public, underline the word general public, aware that our eme=

rgency
communications are threatened," Bell says. "The American public remembers=
9-11.
The American public knows what the continuing threat is.

"We've declared war against terrorism and why would we want to turn aroun=
d and
cripple our effective ability to wage war? And that's exactly what BPL is=
going
to do."

Bell says if energized with information about BPL's risks to national sec=
urity,
millions of Americans can quickly become allies.

"We need to get the word out to the general public and begin to have them=
write
to their congressmen, their senator," Bell says. "And that's the only app=
roach
that I see at this point with the juggernaut that is presently underway f=
rom
the Federal Communications Commission and the (BPL) industry, the only wa=
y
we're going to stop it is to make the general public aware of the threat.=
"

Bell says there are other issues, including interference to TV channels 2
through 6, residual noise to the AM radio bands and virtual loss of CB ba=
nds
used by the many truckers who listen to his show. He says there are also
privacy issues, especially the potential of the government and large comp=
anies
to track people and their habits and choices on a BPL system.
=20
For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V in Philadelphia.

--

Bell currently hosts the weekend edition of the Coast to Coast AM. He al=
so
indicates that his presentation on Saturday, March 20th was only round on=
e. He
is lining up other guests to talk about the BPL issues in the near future=
. To
find out when, keep checking the shows website at www.coasttocoastam.com.=
=20
(ARNewsline(tm))

**

THE BPL FIGHT: HAM RADIO VS. THE WALL STREET JOURNAL

Meantime, a story in a recent issue of the Wall Street Journal about Amat=
eur
Radio=E2=80=99s stand against BPL is raising the eyre off many in the nat=
ions ham
radio community. The item appears to take the position that radio amateu=
rs are
alone in opposing BPL. Also, that their doing do is holding back the flo=
w of
progress in technology. =20

You can judge for yourself by taking your web browser to
http://tinyurl.com/357ye. That is if its still there by the time this new=
scast
goes to air. (ARNewsline(tm))

**

RFI: ELECTRIC BLANKETS - A NEW CHAPTER FOR AN OLD PROBLEM

As if BPL was not enough, now there=E2=80=99s another source of RFI to wo=
rry about.=20
Its things that keep us warm.

According to Roy Trumbull writing in the CGC Communicator, RF interferenc=
e from
electric blankets is another problem that can be added to a history of si=
milar
events. The ones caused by heating pad thermostats and the class of
transformers used for door bells. Turnbull says that RFI from these devi=
ces
can affect AM reception for quite a distance from the source. =20

Turnbull also adds this interesting aside concerning electric blanket saf=
ety.=20
He says a little noted change in product design took place when there was=
that
firestorm some years ago over magnetic fields from power lines. The elec=
tric
blanket makers got a jump on things by switching to twisted pair wiring. =
This
says Turnbull solved the problem of the significant magnetic fields that =
were
produced by the earlier blanket design. (CGC)

RESCUE RADIO: REACT AND THE AMBER ALERT PROGRAM

Ham radio appears to be leaving itself behind in the area of responding t=
o
notices of kidnapped children called Amber Alerts. Meantime REACT and ot=
her
citizens radio organizations are taking the point position in spreading w=
ord of
these vital searches. Amateur Radio Newsline=E2=80=99s Bruce Tennant, K6=
PZW, takes a
look at how REACT has gotten involved:

--

Nobody seems to know why hams appear to have no interest in the Amber Ale=
rt
program, but other civic minded radio services are not standing still. A=
nd the
April issue of Popular Communications magazine is highliting REACT as bei=
ng one
of those jumping in to providing communications for these alerts and sear=
ches.

The magazines Info Central column highlights the activities of REACT team=
s
across Ontario Canada and the northern United States. This, as they res=
ponded
to an Amber Alert issued by the Ontario police after Cecelia Zhang was
abducted in Toronto. =20

Ron McCracken who is past President of REACT told Pop Comm that they were=
given
details of the alert and were asked to broadcast it on C-B channel 19 to
truckers passing along the highways. The alert included details of the k=
idnap
vehicle and the victim along with the suspects.

The broadcasts began at about 5:30 in the evening and went on through mid=
night.
McCracken says that CB radio was combined with computers and e-mail to s=
pread
the word far and wide in a very short time. This allowed truck drivers a=
ll
along the border to keep an eye out for both the little Cecilia and her
abductor. =20

According to McCracken, this was REACT=E2=80=99s first response to an Amb=
er Alert and
in his estimation it went very well. You can read the full story starting=
on

page 5 of the April issue of Popular Communications magazine.

For the Amateur Radio Newsline, I=E2=80=99m Bruce Tennant, K6PZW, reporti=
ng.

--

The Amber Alert was created in 1997 as a tribute to 9-year-old Amber Hage=
rman.=20
She was kidnapped and brutally murdered while riding her bicycle in her
hometown of Arlington, Texas. =20

If you want to know more about how you can start an Amber Alert Plan in y=
our
area and involve your radio hobby, it can be found by taking your web bro=
wser
to www.missingkids.com. Then click on the words Amber Plan. (PopComm,
ARNewsline(tm))

**

RESTRUCTURING: SAN MARINO AND NORWAY EXPAND 40 METERS

Two more nations have gained spectrum at 7 MHz. Both are in Europe. Jer=
amy
Boot, G4NJH, in Nottingham in the UK has more:

--=20

Two more European countries have gained access to the 7100 to 7200 kHz se=
gment
of the 40-metre band. San Marino, T7, has authorised amateur radio opera=
tion
in the 7100 - 7200 kHz band on a Secondary non-interference basis, with e=
ffect
from the 25th of February.=20

The Norwegian Post and Telecommunications Authority has also announced th=
at
Norwegian radio amateurs can use frequencies in the segment 7100 - 7200 k=
Hz
with secondary status starting from the 1st of April.=20

This is in addition to the existing segment 7000 - 7100 kHz where radio
amateurs have primary status. The maximum transmitter output power in the=
7100
- 7200 segment will be 100 watts in Norway, and the maximum bandwidth 6kH=
z.=20

Jeramy Boot, G4NJH.

--

Croatia was the first European country to expand its 40 meter band. That
happened last December. (GB2RS)

**

RESTRUCTURING: ARRL AND NCVEC PETITIONS ASSIGNED RM=E2=80=99S

Here in the U-S, our FCC has assigned rulemaking numbers to separate peti=
tions
for license restructuring and changes in code requirements filed by the A=
RRL
and the National Council of Volunteer Examiner Coordinators. The ARRL pe=
tition
has been designated RM-10867 while the NCVEC petition is now RM-10870. =20

Two other petitions were released for comment at the same time - RM-10868=
was
filed by the Radio Amateur Foundation, and RM-10869 by Ronald Lowrance of
Georgia. Both also seek changes in amateur licensing requirements, partic=
ularly
with relation to the code exam.

All petitions are available online via the FCC's Electronic Comment Filin=
g
System website. The comment deadline on all four petitions is April 24, =
with
reply comments due 15 days later. (CQ, W2VU)

**

ENFORCEMENT: WARNINGS TO TWO TRUCKING FIRMS ABOUT 10 METER OPS

The FCC has warned the owners of a Bristol Pennsylvania trucking company =
to get
their personnel off of the 10 meter Amateur band or face some expensive
consequences. In a letter to Cassidy's Express the FCC says that it has
information that one of the company=E2=80=99s tractors pulling a "CAI" tr=
ailer on
Interstates 476 N and 76W in Pennsylvania, was the source of unlicensed r=
adio
transmissions on the 10 meters. =20

The incident took place last October 9th between 8 AM and 8:30 AM local =
time.=20
The Commission has informed Cassidy's Express that operation of radio
transmitting equipment without a license is a violation of Section 301 of=
the
Communications Act. That it could and will subject the operator to fine =
or
imprisonment, as well as seizure of any non-certified radio transmitting
equipment. =20

For those not aware, unlicensed operation carries a fine of $7,500 to $10=
,000
for each instance charged. A similar letter was sent to CLR Transport of
Saluda, North Carolina warning of unlicensed 10 meter operation from one=
of

their trucks on Interstate 85 between Gastonia and Kings Mountain, North Carolina on July 14, 2003. (FCC)

**

THE CLUB SCENE: USS HORNET ARC NOT DISBANDED

Contrary to rumors, the Amateur Radio club that supports museum ship U-S-=
S
Hornet has not been disbanded. This, according to Tom McGlinn, KO6HA who=
is
the trustee for the NB6GC callsign and the new president of the USS Horne=
t
Amateur Radio Club.=20

Writing on the QRZ.com websire, McGlin says the original story of the clu=
b
being dissolved is untrue. He says that the group is still active and ab=
oard
the USS Hornet and that all QSL requests will be handled as in the past. =
Please
direct any inquiries concerning the USS Hornet ARC QSL program to=20
ko6ha@earthlink.net (QRZ.com)

**

ON THE WEB: BIG UPGRADE AT QRZ.COM

The servers that provide you the QRZ.com website have been relocated to t=
he
company=E2=80=99s hosting facility in Phoenix, Arizona. The new location =
affords
QRZ.com with 24 hour a day, 7 days a week backup power and a very fast 10
Megabit connection directly to the Internet backbone.=20

QRZ.com owner and administrator Fred Lloyd, AA7BQ, gave special thanks to=
Chris
Radicke, N7TWW and Mark Krotz, N7MK, who assisted him in transporting the
computers, building the cabinet shelves, pulling cables, and in generally
making the transition go as smooth as silk. Lloyd says that thanks to so=
me
great prepatory work QRZ.com was out for no more than 2 hours during the
location changeover. (QRZ.com)

**

ON THE WEB: WWW.SCOTHAM.NET

WWW.SCOTHAM.NET is a new Internet portal concerning ham radio in Scotland=
. The
aim of the site is to further the interests of Scottish hams in all aspec=
ts of
Amateur Radio. The portal also presents an interesting view of life in Sc=
otland

as it pertains to ham radio. Again that U-R-L is WWW.SCOTHAM.NET and you=
will
find it on the World-Wide-Web. (MM0DFV)

**

WITH THE HANDI-HAMS: 3905 QSL BUREAU

The Board of Directors of the 3905 Century Club has unanimously approved =
the
establishment of a QSL Bureau and Manager. This, to support any Handi-Ha=
m
members that wish to participate in the club's nets. =20

Handi-Ham members can use the bureau a number of ways. This includes the
actual completion of cards for the contacts they make on 3905 Century Clu=
b
nets.=20

The 3905 Century Club has nets on four bands and all modes including SSB,=
CW
and Digital. More information, including net schedules can be found at
www.3905.com. (Handi-Hams)

**

CONVENTIONS AND HAMFESTS: ARRL AT NAB IN APRIL

Turning to the ham radio social circuit, the ARRL will be visible at the
upcoming National Association of Broadcasters convention. Amateurs visit=
ing
the exhibits at the Las Vegas Convention Center are invited to stop by Lo=
bby
Booth 9 where the ARRL will be exhibiting its latest publications and ot=
her
materials related to the hobby.=20

The booth will be staffed by ARRL national officers and volunteers from t=
he Las
Vegas area headed up by Bill and Carolyn Cornelius. They are K8XC and K9=
XC
respectively. The booth will also be able to provide information on the =
April
21st NAB Ham Radio Reception sponsored by Heil Sound.

Bill Cornelius does have a limited number of complimentary VIP Exhibits P=
asses.
Requests for them go by e-mail to k8xc@aol.com. (K8XC)

**

HAMFESTS AND CONVENTIONS: EMCOMMWEST IN MAY

And word that the combined EMCOMMWEST 2004 conference and the Reno Sprin=
g
Hamswap is slated for the weekend of May 22nd to the 23rd. This years th=
eme is
Amateur Radio Emergency Communications in the 21st Century and will featu=
re
appearances by knowledgable guests that include Dan Miller, N-3-U-F-G fr=
om
ARRL Headquarters. His presentation will include information on the ARRL
Emergency Communications on-line courses as well as an overview of how am=
ateur
radio interfaces with The Office of Homeland Security. =20

For complete up to date information, location and on-line registration fo=
r
EMCOMMWEST and the Reno Spring Hamswap, take your web browser over to=20
www.emcommwest.org. Planners say that the site will be updated frequent=
ly
with new information as it becomes available. (Emmcom West)

**

BREAK 2

This is ham radio news for today=E2=80=99s radio amateur. From the Unite=
d States of
America, We are the Amateur Radio Newsline with links to the world from o=
ur
only official website at www.arnewsline.org and being relayed by the volu=
nteer
services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: PROFESSOR SAYS ISP=E2=80=99S SHOULD POLICE CONTENT

A new cyberspace business plan from a legal scholar says that Internet Se=
rvice
Providers should become cyber cops and force everyone to pay a royalty f=
ee for
every song, movie or book they download to their personal computers. Bil=
l
Pasternak, WA6ITF, has the details:

--

Lon Sobel is a professor at Loyola Law School and an expert on copyright =
and
entertainment law. He says that Internet service providers such as Ameri=
ca
Online and Earthlink must become digital police and send customers monthl=
y

bills based on how much copyrighted material they download. =20

Under Sobel=E2=80=99s plan, consumers who download expensive software suc=
h as Adobe
Photoshop could pay as much as $600, while someone who grabs a single son=
g
could be charged as little as 49 or 50 cents. These charges would be in
addition to the usual dial-up or broadband monthly connection fees.=20

Critics of the plan include computer experts, Internet service providers =
and --
believe it or not -- the entertainment industry. Bob Blakley, a computer
scientist and security expert at IBM, says that a clever hacker could wri=
te
computer code that would attaches itself to every piece of copyrighted co=
ntent
on the Internet. Then it could funnel some of the cost of the download t=
o the
hackers personal bank account.=20
=20
Blakley and others say peoples attitudes is one of the biggest challenges=
in
digital rights management . That an entire generation of consumers has b=
ecome
used to free music and other content posted on the Internet. He says tha=
t they
will do anything it takes to get content for free. This includes breakin=
g the
law to avoid paying $10 to $20 for a compact disc, DVD or electronic book=
. =20

For the Amateur Radio Newsline, I=E2=80=99m Bill Pasternak, WA6ITF

--

A senior executive at Verizon Communications is quoted as saying that In=
ternet
service providers will reject the plan noting that few companies could ke=
ep
track of every downloaded item or determine the value of every file passi=
ng
through their system. (Published news reports)

**

WORLDBEAT - CANADA: NEW CONTEST MANAGERS

Radio Amateurs of Canada has announced the appointment of Sam Ferris VE5S=
F,
Bart Ritchie VE5CPU and Bruce Rattray VE5RC as managers for the Canada Wi=
nter
and Canada Day contests. They replace retiring managers David Shipman, VE=
7CFD

and the Moncton Seniors Amateur Radio Club who have performed this duty f=
or the
past several years. (RAC)

**

WORLDBEAT -NEW ZEALAND: NZART COUNCIL APPOINTMENTS

NZART President Peter Norden, ZL2SJ, has announced the appointment of Noe=
l
Rowe, ZL3GR, to society=E2=80=99s Council. Rove is a second term council=
or having
served previously in the 1990=E2=80=99s. He replaces Ted Minchin, ZL1MT,=
who
resigned for personal reasons.

Another Council appointment is that of Joe Reed, ZL2AH who volunteered to=
take
on the tasks of Reciprocal License Bureau Manger. He replaces the late R=
uss
Garlick, ZL3AAA. (NZART)

**

HAM RADIO IN SPACE: K6DUE MEMORIAL ARISS EVENT QSL CARD UPDATE

Hams waiting for QSL cards from the K6DUE Memorial operating event, pleas=
e
listen up. Frank Bauer, KA3HDO, who is ARISS International Chairman says=
in
order to save postage costs, the process being used for the special event
certificates is this. The various regions such as Europe, Canada, USA, R=
ussia
and=20
Japan are collecting the QSLs and generating compiled lists of names and
callsigns. These lists are then used to print the certificates and retur=
n them
to the regions for direct distribution. Bauer asks that everyone be pati=
ent,
indicating that it will be well worth the wait. (KA3HDO)

** =20

DX

In D-X, three German operators will be active as A35DA, A35DH and A35DJ f=
rom
Fafa Island in Tonga through the 29th of March. Activity is on all bands=
from
80 to 10 meters on SSB, PSK 31 and RTTY. QSL as directed on the air.

Also, word that KE2SP is active on 10 through 20 meters from the island o=
f
Hydra. This, as SV8 stroke KE2SP. He will be there until the 15th of J=

une.
The island counts as EU-075 for the Islands on the Air awards program.

And the Ohio Penn D-X Newsletter reports that ZL1CT is planning to be act=
ive
fro Chatham as ZL7V. This, from July 5th to the 15th. Activity will be =
on 80,
40, 30 and 20 meters using CW and SSB. QSL this one via N3SL. =20

(Above from various DX news sources)

**

THAT FINAL ITEM: A HAMVENTION 2004 RADIO ROAD INFORMATION SERVICE

And finally this week, if you plan to drive to this years Hamvention, the=
re
will be a special service to make your trip a bit more pleasant. This as
Information Radio in Dayton, Ohio announces plans to provide Road to Hamv=
ention
announcements on Highway Radio 1610 AM. As you might expect, 1610 Kilohe=
rrtz
is the frequency and the person behind the idea is Norm Schrein, KA8PGJ.

--

Schrein=E2=80=9D =E2=80=9CFor Hamvention, we are planning on putting som=
e information in
regard to directions to the Hara and hours of the hamfest itself. Peopl=
e
coming into town can obviously get information via the ham repeaters, but=
we
may be hitting people who aren=E2=80=99t hams at all or who do not have A=
mateur Radio
equipment but who will pick this up in the loop and take in the hamfest.=E2=
=80=9D

--

Information Radio is a service provided by the Emergency Communications C=
enter
Incorporated. This is a not for profit organization with which Schrein i=
s
associated. He says that stations like this are a lot more common than m=
any
people realize:

--

Schrein: =E2=80=9C530 Khz is where to find a lot of the stations like th=
is and then
about 1610 through about 1700 Khz you will find a lot of these travelers
information stations as well. A lot of them tend to be site specific. T=
hat

is, if you go through Pennsylvania, you may hear something about one of t=
he
state or national parks or involving the roadways if its run by the Dept.=
of
Transportation. Where ours is a little unique is that it is kind of all
encompassing. It covers everything happening in the Dayton area from loc=
al
parks and recreationb to people having a parade to events like the
Hamvention.=E2=80=9D

--

Schrein says that anytime you are headed to the Dayton area be sure to tu=
ne
your car radio to 1610 kilohertz. Whether its trying to find your way in=
to
town or heading to the HARA Arena for Hamvention 2004, Information Radio =
will
be there to serve you.

More information on information radio stations can be heard on this weeks=
Rain
Report. Its at www.rainreport.com or landline at 847-827-7246. (ARNewsl=
ine
(TM))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magaz=
ine,

Pure opinion
I like 165 and 166. Especially Dave Ramsey. Also David Lawrence on 152. John and Jeff are tolerable overnight. Phil Hendrie is funny in small doses.

Ever listen to Janet Parshall on 170? Daytime 2-5pm eastern.

Phil Hendrie streams can be found on this page, and many of them carry C2C also. I can only pickup one talk radio station in my house. If a ball game pre-empts I HAVE to use streaming if I want to hear Hannity, Hendrie, etc. I'm ready to get XM, though.

For sale:

The "Radio Crazy" is baaaaaaakk!!!

AM CP for Warner Robins, GA. "Only" $50,000. 1,000 watts days, 250 watts nights. Non-directional.

Warner Robins has a population of about 53,000, is the 8th largest city in Georgia, has the largest civilian employer in Georgia and is probably the FASTEST GROWING CITY in Georgia!

There is only one competing AM in the community.

Tel: (478)741-1710.

Only those fully identifying themselves with proven financial ability will be told more about this interesting situation.

References:

Very long feature just finished on "Broadcasting House" on Radio 4 this morning , about right wing and left wing stations in the US and the up and coming liberal station.

Played air checks of various broadcasters.

Are these what used to be called shock jocks? They are more shocking than ours in the UK!

Rush Limbaugh seems to be in a sad state, his catchphrase is "Talent on loan from God"!

G Gordon Liddy seems very opinionated.

I quote from the programme "radio is to the right".

I wonder if the new station, Air America, will be welcomed to widen the dialogue. Will advertisers aim to the liberal market?

Mike

# 809. WWVA to Ohio - how?

Newsgroup: rec.radio.broadcasting
Date: 2004-03-28 22:20:19 UTC
From: Doug Smith W9WI <w9wi@invalid.invalid>
Message-ID: <c47j33$1cn$1@xuxa.iecc.com>
Source record: 5698

Among a HUGE batch of major-change and new-station applications recently released by the FCC is the application of WWVA-1170 (Wheeling, WV) to move to Stow, Ohio.

Grant of said application would require that something happen to WCUE-1150 in Cuyahoga Falls. Power reductions and/or pattern changes wouldn't cut it, as Stow and Cuyahoga Falls *border on each other* - you couldn't obtain a pattern tight enough to provide city-grade throughout Stow without leaking enough into Cuyahoga Falls to interfere. And vice-versa.

I see no applications from WCUE in the database. In any case, I thought the FCC summarily dismissed contingent applications? (applications whose grant is contingent on the grant of some other application) I.e., WWVA's application would *have* to be dismissed unless WCUE is first granted a frequency change or move to a new city-of-license.

On the other hand, I'm sure the engineering study for WWVA wasn't cheap - and Clear Channel isn't known for wasting money filing impossible technical changes. Obviously they've found *some* way they expect to get this change through.

I wonder if anyone knows *how*?

What is not widely publicized about this new network is that it's on a
bunch of technically-weak stations. None of them are competitive, from
a signal standpoint, with the stations that air the right-of-center
programs.

No, "shock jocks" refer to attempts to shock with sexual innuendo.
"Shock" announcers generally don't have any particular political agenda.

IMHO advertisers will buy any program that people who buy their products
listen to.

Perhaps it's not Stow, but Steubenville. Wheeling is across the river from Steubenville, pretty much, but is nowhere near Stow, and I not only can't see the FCC allowing 1170 and 1150 to be lit up in the same market, I can't see the FCC allowing Clear Channel to remove an operational station from one market to put it into another.

> On the other hand, I'm sure the engineering study for WWVA wasn't cheap

I want to know what the point is. What are they going to put there? Someone else owns the news-talker in Akron, they own ESPN 1350; Akron's a small market. How many AMs do they expect the area to be able to support? There are a few minor ones like WCUE in addition to 1350 and 1590 already.

It's my personal opinion that someone at Clear Channel needs to remove the crack pipe from their anal cavity. ;)

> vice-versa.

The proposed WWVA xmtr location is 20.6 miles NW of the WCUE xmtr location.
The WWVA xmtr is off the peak of the WCUE 6-tower pencil beam. The way I
read the rules the stations must have no more the 2 mV/m at the other's
25 mV/m contour and vv.

WWVA's proposed transmitter location and all other AM stations' are in the
latest AMSTNS data reflected in the M-FILES.ZIP available from my Web site
http://users.erols.com/rcarpen This data will allow you to plot the xmtr
locations on any version of DeLorme Street Atlas. From my site you can link
to Vehorn's web site to get the full AMSTNS info, or get just the patterns
from www.fccinfo.com .

None of which addresses your point about WWVA having COL-grade coverage at
Stow.
WWVA's proposed pattern is very broad, and not down very far toward Cuyahoga
Falls.
(or Stow). WCUE must not have a lot of sig at Stow because of its VERY
tight
pattern. The outdated info I have lists the Stow ZIP code as having a
population
of a bit over 30,000, but that includes a lot more than just Stow. Likewise
my
old population data shows just 32,000 for the Cuyahoga Falls ZIP. Could it
be
that neither of these towns has more than 10,000 in its INCORPORATED area -
and may thus require only 2 mV/m signal. Cuyahoga Falls is definitely in a
minor
lobe of WCUE's day signal. There may be an agreement to mutually accept
some
interference over small areas outside their COLs.

I can't imagine that WCUE is worth very much - could there be an agreement
to
purchase and take dark not reflected in the WWVA application?

> I see no applications from WCUE in the database. In any case, I thought

See above.

Also note that there is an application by WRTK for 1180 days from WABQ's
site in the NE suburbs of Cleveland.

bob c.

What are the other stations?

I would imagine that it's rather difficult to find available outlets
in the major markets for an unproved product, when the big stations
already run the rightwing stuff.

# 819. For sale: w/special permission from parole office Larson E. Rapp.

For sale:

With special permission from parole officer Larson E.
Rapp. Zing Zing prision, Ossingstink, NY.

I am still trying to put together joint venture to
acquire an AM/FM in a small Virginia college town.
Only $400,000 total asking price with real estate
included.

Active or inactive investors with at least $20,000
each are welcome. All investors would be on the board
with full voting rights if desired. No individual can
own over 49 percent and that means me too!

I am NOT a crook! I am also not an agent, broker,
shill, owner or part owner.

The "Radio Crazy", it's baaaaaaakkk!! Hi!

Tel: (478)741-1710.

I am still offering an AM CP for sale, All of it. It
is for Warner Robins, GA. Fulltime on 1600 KHz. 1 KW
days, 250 watts nights, non-directional. City of about
53,000. 8th largest city in Georgia. Probably the
fastest growing city in the state! $50,000 cash.

Comments from Clevelanders on another list indicate the incorporated areas of the two towns border on each other. (Steven S., do you know if this is true?)

The Census Bureau's map page says the 1990 population of Stow was 27,702 and of Cuyahoga Falls 48,950. (each spread across multiple ZIP codes) I'd think that would mean the incorporated area but could be wrong.

I guess if they only need 2mV/m then it works out from WCUE's standpoint.

> I can't imagine that WCUE is worth very much - could there be an agreement
> to
> purchase and take dark not reflected in the WWVA application?

My bet is this is what's going on. Maybe CC will hand over one of their smaller Cleveland/Akron-area AMs in return?

> Also note that there is an application by WRTK for 1180 days from WABQ's
> site in the NE suburbs of Cleveland.

Yep, there are nearly 200 other applications for major changes. WWVA's is the only one involving a 50,000-watt station, but there are some other big ones, sometimes involving moves to different markets. For example, KBLU-560 Yuma, Arizona to Nellis AFB (Las Vegas), Nevada. Or WCSJ-1550 (Morris, Illinois) to Amado, Arizona on 670...

There's also a pile of applications for completely new stations. Some of them in surprisingly large cities - for example, for a new Class C station on 1400 in Philadelphia...

Perhaps it's not Stow, but Steubenville. Wheeling is across the river from Steubenville, pretty much, but is nowhere near Stow, and I not only can't see the FCC allowing 1170 and 1150 to be lit up in the same market, I can't see the FCC allowing Clear Channel to remove an operational station from one market to put it into another.
>>

CC bought and took dark two full power (old rules) 1150s so it could pump its L.A. 1150 to full power (new rules) ... 50 kW days, 44 kW nights.

The move of WWVA is indeed to Stow, OH, with the Tx site midway between Cleveland and Stow.

The proposed DA-D is most likely to protect adjacent-channel stations.

The proposed DA-N is to protect a co-channel station ... ex-KVOO being the only one that matters for 27 kW.

For 50 kW nights, the Class I-N in Alaska would have to be considered, and the DA-N would likely have to have more towers.

There are three Class As on 1170 ... all are U.S.

>
>I wonder if anyone knows *how*?

The presumption, by many of us following this move, is that CC has
made a deal with Family Radio to either shutter or move WCUE/1150
Cuyahoga Falls.

You're right, there's no way to plop 1170 on the dial licensed to Stow
(even if the tower is out past Strongsville) if 1150 is on in the
Falls.

Unfortunately, the WWVA move application has no attached PDF files, so
it's hard to tell how they're justifying the move technically re:
WCUE's presence. But I'd bet the farm that WCUE is either going to be
paid to go dark, or move frequency. A friend suggested that 1140
might work, since two stations in the region that used to be on the
frequency are no longer on the air...but I don't know if that
third-adjacent would be enough.

I'm also unsure why a WCUE application hasn't ended up online yet, but
this could all be already "covered", just not online at the FCC site
yet.

I'd actually shed a tear for a dark WCUE, as it's the first radio
station sort of in my resume, and a long-time Top 40 outlet locally
back in the day.

It's been done before... WHMA-100.5 Anniston, Alabama moving to College Park, Georgia (Atlanta suburb); KGYN-1210 Guymon, Oklahoma moving 200 miles to Oklahoma City (not yet implemented)...

> I want to know what the point is. What are they going to put there? Someone

Judging from the transmitter site their target market is Cleveland, not Akron. With 50,000/27,000 watts they'll have a far better signal across the city than probably anyone else except 1100 and 1220.

Steve, the WWVA proposal is to serve Cleveland, but licensed to Stow. It would be 16 miles SW of the Terminal Tower, but 26 miles WNW of Stow. Stow obviously needs a "first local service", while Wheeling has a number of AM and FM stations (irony OFF).

WRTK Niles is proposing to move to 1180 with 3 towers at the WABQ site to serve "Lakewood". It is surely just a coincidence that the WABQ site is east of Cleveland while Lakewood is west.

If you're referring to the former KDAY in Santa Monica, it has a
decent signal to the North but does have to protect the Mexican (used
to be XEDM, I believe) on the same frequency.

I'm afraid the BBC is stuck in the last century. Rush Limbaugh has
been using that slogan almost since day one well over a decade ago.
It's a little like saying WINS is in a sad state because they've used
"Give us 22 minutes and we'll give you the world." Sometimes a slogan
stands up to the test of time. Advertising agencies have orgasmic
incedents when they discover one of their slogans enters popular
culture.

>G Gordon Liddy seems very opinionated.

Duh!

>I quote from the programme "radio is to the right".

Duh!

>I wonder if the new station, Air America, will be welcomed to widen the
>dialogue.

First, a very small percentage of the population will have access to
Air America programming compared with its conservative competition.
It'll take many years to develop the coverage enjoyed by Limbaugh
(600+ for Limbaugh. Fewer than 20 marginal signals for Air America).
The conservatives already have the best signals on well branded
stations.

New York will be very difficult because their outlet is solidly
branded as a Black station, both Black talk and Dominican music. The
WLIB heritage (sadly) will have to be destroyed before a new one can
be created. That'll require a call letter change and very expensive
promotion. Their competition will be WABC. WABC does a lot of transit
promotion and television during important rating surveys. WABC and
KFI, Los Angeles compete for the title of the most listened-to Talk
station in the nation.

I have the feeling that Al Franken, in partifcular, will make it an
"us vs. them" atmosphere. If he does, it'll be a wonderful promotional

medium for conservative stations. The more he mentions O'Reilly and Limbaugh the more Air America should charge Premiere and Westwood One for advertising time. I say that sadly because I really like Al Franken and Randi Rhodes.

>Will advertisers aim to the liberal market?

By and large advertisers avoid any kind of controversy. That's why Laura Schlessinger lost 30 million in billing over her slam at the gay community and Michael Savage threatened to sue everyone on earth for complaining to his advertisers for something similar (excuse: "I didn't know the mic was on"). Large network advertisers avoid controversy like the plague. It doesn't matter if the controversy is on the right or the left.

I can't believe the BBC is just noticing that Talk Radio in the US is right wing.

Rich

Here in the DC area WGOP hasn't show up at all in the DC area Ratings and were at the bottom of the Frederick, MD., ratings in the past 2 years. It appears that in order to make *any* money, they're going the brokered route. The Greaseman is still on in the mornings but most of the rest of the day is brokered. On weekends I've heard Michael Medved which is interesting since he's no longer on live on WGOP during the weekdays.

I (well, actually my kids) wish this station would go the Radio Disney route. Barach, WGOP's owner, also owns AM540 in Pittsburgh which runs Radio Disney and my kids love to listen to that when we travel up there. It's a shame. They do have a decent daytime signal but nobody knows they exist -- and the few that did know won't listen to the brokered crap they're airing now.

260 ft. Stainless G-25 tower, excellent condition, on ground. Sections are very heavy-duty weighing estimated 400-500 lbs each. All steel components are galvanized solid-rod, so interor corrosion is not possible. Leg diameter is 1.5". Cross brace diameter is half inch. Face width is 24". Bottom mounting plate is one inch thick with round pivot point.

Section flanges attach with one inch bolts. Located near Bowling Green, KY. For more information
call C. Scott at 270-745-3834, or see photos on web page. Price is $3,200 - as is, where is - you load and move. Referral for moving and installation available. See:
http://www.scott-inc.com/tower/stainless.htm

And if you're trying to handicap the "first local service" thing, Stow would have great odds. It's grown like the proverbial weeds over the past 20 years. The population figure cited here (27,000) is probably more like 40,000 by now. Stow's eastern edge, near Kent, is dotted with a whole bunch of new housing developments, and a new giant Stow-Munroe Falls High School in that same area of town.

And among other "usual suspects" for the first local service petition, Stow has its own weekly newspaper, and they could probably make an argument that it has enough employment separate from Akron or Cleveland.

I'm just not sure why a Cleveland area community - within the proper signal range of the site in Lorain County near Strongsville, which would still provide a market signal over Cleveland - wouldn't work here...and why they had to reach clear to Stow to find a COL for the new 1170 app.

Mike

Hard to imagine they'd want to ditch the WLIB calls as they take on liberal talk. I noticed you mentioned WINS in the same post. Heavily branded Top 40 calls, and scandal-tarnished as well. Became quite a successful news brand nonetheless.

(You mentioned WABC as well. Highly branded calls but in that case obviously untouchable. I was amazed a few years back when they briefly experimented with "770" as their "channel brand.")

It is only moderately listenable in the San Fernando Valley in the daytime,
and virtually useless there at night. That is to the North.

1580 in the US protects, if I am not mistaken, the B assignments in both the
US and Canada.

And XEDM in Hermosillo, a non-directional 50 kw station, virtually wipes it
out in the fringe areas at night.

Advertisers aim at large audiences. They seldom care about political
opinions.

## 842. The future of radio broadcasting?

With news updates on cell phones and watches, and immediate Internet news coverage, will listening to news on the radio become something of the past?

And non-English brokered at that at times..

I gather that they are silent quite a bit of the time.

Their renewal is still on hold months after it would normally have been
granted.

The owner is trying to move both WGOP and his station on 540 on the eastern
side of Chesapeake Bay to Damascus, MD. (Not licensed to there of course).
I think it's very iffy whether a county building permit will be issued.

Am I reading this right? Somebody wants to move a station across 6 states?

Checking FCC site. Yeah, that's what they want to do.

This is completely assinine. Why not just apply for a new station?

I suppose the Akron one... (which one do they own?)

IIRC WTAM-1100 is their Cleveland AM - I'm sure they'll want to keep
that - but nothing in Akron comes anywhere near the proposed Stow
signal, IMHO they'd be glad to trade it to Family Stations if that gets
them approval for the 1170 move.

Both stations took many years to change their branding. As I recall,
WINS took about 8 years to really take off. I don't believe WLIB will
have the luxury of that kind of time. Talk Radio is a slow build.

If the deal instantly makes WLIB profitable, Percy Sutton will give it
all the time it needs. Will Air America have the money it takes to
survive?

I hope it does and I hope they focus on entertainment rather than
rabid politics.

Rich

>the past?

Maybe, but I don't think so.

My experience of news on the Internet is that it is rarely as immediate as radio. I have little experience of watches and phones as news media, but I can't imagine them as anything but subscription services. Radio is free and, moreover, something one can leave on as one goes about one's daily routine. It is always likely to be the first choice, except for CNN and its ilk.

Unless, of course, the broadcasters blow it.

Here in Boston there is very little news of value on the radio any more except on WBUR. That's sad, and presents a possible scenario by which radio might lose out to new media as a news source.

Broadcasters have to wake up, I think, and see what's happening to radio. At a time when XM and Sirius and establishing their beachheads like the Allies on D-Day, too many broadcasters are withholding their Panzers from the fight, perhaps because they think the expense wouldn't look good on Wall Street.

Radio isn't nearly as exciting as it used to be. The creative experiments and colorful rivalries of past decades have given way to a Borg-like uniformity of sound. The glamour and excitement are gone, and announcers seem more assembly line workers than entertainers. The whole industry seems asleep at the wheel. Science has eclipsed art, and that may be radio's downfall.

Unless, of course, I am wrong.

Clear Channel actually owns two AMs in this market (Akron). In
addition to WTOU "Fox Sports 1350" (the historic country WSLR), which
they picked up in the Barnstable deal with WKDD/96.5, they recently
bought WHLO/640 from Salem. WHLO was flipped to a news/talk format
shortly after the purchase.

My gut tells me that they won't give up either 640 or 1350 to Family
Radio...and that somehow they'll move or pay FR to shutter 1150 to get
the move accomplished.

Of course, since the Barnstable purchase, 96.5 - still licensed to
Akron - became Cleveland market "96.5 Kiss FM", and the WKDD
programming moved to 98.1 Canton...the former WHK-FM, once owned by
Salem.

Unfortunately, making fools of callers is what drives most US Talk
Radio. We get a reprieve on the weekends when the "lifestyle" shows
predominate. It's hard for a pet show to make mean-spiriited fun of
someone who chooses a pig as a pet. You can criticize our President,
but keep your opinions to yourself when it comes to our pets. In this
case, the pig is smarter.

Rich

Which is what they did in CA to get two co-channel 1150s off of L.A.'s 1150 in
order to do a 50/44 kW upgrade there.

Well, we've got WBZ, which is mostly short and sensational
stories; and then there are a bunch of stations that use Metro
News, which means they all share the same source, and that
source does a pretty poor job, sometimes not even getting basic
facts right.

If you want anything deeper than headlines, WBUR is pretty much
your only choice.

WCBN WILL DESTROY YOUR FEEBLE FORMATS
=20
WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Listening to anything on radio is becoming increasingly difficult.
It's a tossup between the talking head saying "News-Talk 730 - WSC" 25
times every 10 minutes, trying to jack up the ratings by saturating
the listeners with RCA marine communication's shortwave callsign (730
is WSCC) and the saturation advertising playing the same spots 8 times
an hour in a string of like spots played 8 times an hour for 6 minutes
STRAIGHT with no programming whatsoever.

Is it any wonder noone is listening?

I'm always suspicious of the news on a radio station that is actually a PC on a desk and a satellite dish on the roof. How can a radio station have instant local news when there's really NOONE EMPLOYED?

There's 5 stations in one office, here, and only one of them actually has a talking head live on the air. He's also an automaton because the computer warns him he has 10 seconds before its his turn to talk and starts warning him he has 5 seconds to stop before the next row of 12 spots we've all heard a hundred times in the last 8 hours plays over again.

They don't even have an engineer, any more.....and it shows.

It seems to me that what you're really lamenting is the state of radio broadcast journalism. However, it's not just radio Journalism, it's all Journalism.

Maybe it was always this way and we just didn't know any better. The Internet has suddenly exposed a cacophony of opinions and sources of information that the public simply had no exposure to before. And as the influence of the Internet spreads, it becomes possible to check up on what was difficult to research before. So it comes as no surprise to me that when the public lifts up this rock one can find all sorts of weird critters lurking under there.

Now, as to format: Attention spans are shortening among broadcasters. Many are looking for the quick attention grabbing headline and then forgetting to back it up with a real meaty story. Why bother? It's expensive to do good research. Only NPR puts stuff like that on the air, and most have no desire to compete against government funding. It's cheaper to produce another headline with a thin story behind it.

What these radio broadcasters don't recognize is the value of a long term investment. They flit from headline to headline until most of their listenership can barely lift their knuckles off of the floor. And by then, most of the advertising for smart people has long gone along with anyone who uses their opposable digits. This explains the inanity of most advertising you hear on the air.

Radio is hardly the only business which can't seem to focus on the long term. In my personal opinion, I think the future will see the audience slowly melt away toward other media. There is an article in the NYT recently (http://www.nytimes.com/2004/03/29/technology/29guy.html) about how 18-35 year old men are watching less and less TV. As broadband access improves, audio programs are getting easier to download. I expect more people will tend to download the programs they want to listen to rather than see what's on the radio.

Of course, this is just my speculation. It's worth only what you paid for it.

umarc> News, which means they all share the same source, and that
umarc> source does a pretty poor job, sometimes not even getting
umarc> basic facts right.

umarc> If you want anything deeper than headlines,
umarc> WBUR is pretty much your only choice.

Are you saying that WRKO and WTTK get all their news from
the same single place, and that it's often not right?

Could you give some examples of WBZ not getting their
basic facts right? Perhaps something they reported
wrong in the last two weeks would be funny.

But that WBUR does better? Cuz it seems to me like WBUR just
has the single source NPR feed (same as WGBH), runs the BBC
headline show, has far less local coverage than the others,
and mostly just runs NPR entertainment.

The part I was most curious about your claim that things
had changed in the market -- I am curious as to when it
used to be any different. Which stations had more news,
and how was their coverage different?

I've only been listening in this market for about 24 years,
and in that time it sounds all about the same to me, except
for the addition of WBUR's change a while back to run NPR
syndicated entertainment shows instead of I don't remember what.
I like news, and would like to hear about how it used to be
better, and how it might be driven that way again.

It was my understanding (please correct me if I'm wrong on this) that Air America is leasing WLIB; presumably, profit for Percy is built into the lease terms. Inner City has said that they weren't making a profit with the old format.

The question then becomes whether Air America will ever make a profit; and they have said that their business plan calls for them to lose money for the first two years.

It's certainly a wonder that the spot load on "News Talk 730" is as heavy as
you claim it to be if, as you say, no one is listening. Know what? I'll
bet that lots and lots of people are listening. I wonder why these
advertisers (and so many of them, too) are paying to have their spots not
listened to by anybody. Odd. What's really odd is that the station seems,
by your count, to be airing 48 minutes of spots an hour. Isn't that a tad
unusual? I really don't know the answer.

So far today, the only advertising has been PSAs, promos for other
programs, and an XM trade. And Franken pushing his books, of course.

G. Gordon Liddy calling in from his show to congratulate Franken on HIS
show is a nice touch.

FWIW, Air America is streaming at:

Here's the results of the most recent DX tests that have been received here:

Sunday, March 28, 2004 - KEVA-1240, Evanston, WY tested 1:00-2:00am MST:

As was the case when this station tested on 3/14/04, most of those that heard the test were in the West. Don Kaskey of San Francisco, CA and Pat Martin of Seaside, OR mentioned that the code seemed much weaker this time. However, Tim Hall in Chula Vista, CA reported that he heard the code easily, as was the case with Steve McDonald in BC. Darwin Long in Thousand Oaks, CA heard the test, with several other stations on the frequency. Shawn Axelrod in Winnipeg, MB said he heard KEVA with a poor signal, but was able to hear and understand the code.

Bill Snyder in Omaha, NE, Gerry Bishop in Niceville, FL, and Neil Kazaross in Barrington, IL all reported that they tried for the test but were unable to hear it.

Monday, March 29, 2004 - WXHL-1550, Elkton, MD tested 12:00-1:00am EST:

There wasn't a clear dividing line on who heard this test and who didn't; for instance, Russ Edmunds in Blue Bell, PA, remarked that while his QTH is only 47 miles from WXHL and his loop was pointed right at them, he doesn't think he heard the code from the test due to QRM from CBE and WDZC. However, "rah1962" in IN says he heard the test, albeit the Morse only. Gordon Bell in Troy, NY heard the test well, but Scott Fybush in Rochester, NY reports hearing only a mixing product of some of his locals. Also not hearing the test were Ernest Jones in Greensboro, NC, Bruce Winkelman in Tulsa, OK, Gerry Bishop in Niceville, FL, Kevin Redding in Mesa, AZ, Mike Brooker in Toronto, ON, and Andersson Sigvard in Sweden. Also, John Hunter of Rossville, GA and Adam Myrow of Memphis, TN both heard a station with SS instead of the test.

However, the test was heard by Wade Smith in New Brunswick, Canada, Saul Chernos in Burnt River, ON, Phil Greenspan in Marshfield, MA, Bill Dvorak in Madison, WI, Mike Hardester in Jacksonville, NC, Jim Renfrew in Byron, NY, and Barry McLarnon in Ottawa, ON.

That's all for now...

Lynn.

There are 10 AMs in the metro; WSCC is in a virtual 3-way tie for second. It
has about a 2.6 share, and bills proportionally to the ratings share.

However, were it not part of a successful cluster, the station would
probably not be viable as a stand-alone.

I have on my web site http://users.erols.com/rcarpen , files of lat/long/calls of all AM stations in the FCC's CDBS. This includes the recent applications from the AM filing window.

You may import these files into any version of DeLorme Street Atlas (R) to see the xmtr locations on a map.

My site also contains a link to Larry Vehorn's site where you can download AMSTNS and TVFMSTNS to find more complete info including antenna patterns.

The site http://fccinfo.com allows viewing of antenna patterns online.

>the old format.

Percy Sutton is a very smart man. I'm certain this arrangement brings
WLIB into the black financially. I would bet there's also a piece of
the advertising action built in. It's been reported that Air America
is chargin $1500 a minute. With 6 stations I can only imagine how many
bonus spots that includes.

>The question then becomes whether Air America will ever make a profit; and
>they have said that their business plan calls for them to lose money for
>the first two years.

Walsh and Cohen were interviewed on 60 Minutes II and declared there
was enough money to lose for years to come.

The rollout of Franken was disappointing. He was clearly out of his
element and I have to replace the glass in my car that was shattered
by the piercing laugh of his NPR sidekick. This should have been the
best show they could have done as their debut, having months to
prepare. It wasn't. I think there's too much TV influence to
understand radio.

The production values were bad, as was the interface between Air
America's feed and XM's. Air America's levels were all over the place.
When XM took over levels came back to normal. It sounds like AM
operators who rely on processing to ride gain. Even the 60 Minutes
video showed pinned meters much of the time.

For a few minutes I thought Rush Limbaugh's feed got crossed. Ed
Shultz sounds like a wannabe Rush with only the content changed.

I wish they hadn't gotten so much advance publicity and caused
expectations to be so high and not met.

Rich

The FCC should put the AM band ON HOLD. Then open a DAB band, coordinated with or without the Canadians, I don't care. Open a window for applications to this new band with preferential treatment for existing AM owners, then those with AM and FM operations, and finally FM only licensees FOR THE COL only. License those, with a drop dead date for the existing AM operation of 1 year after a station's CP is completed, and close the AM band , regardless, in 4 years.

It would be ideal for community broadcasters....RDS, heck, just about anything which doesn't need to be co-ordinated. Those who didn't get a license could rent their towers out for cell phones.

# 881. DX tests Summary

Newsgroup: rec.radio.broadcasting
Date: 2004-04-03 15:32:20 UTC
From: ircamember@ircaonline.org
Message-ID: <c4mle4$m5e$1@xuxa.iecc.com>
Source record: 5518
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Sunday, April 11, 2004 - WNNR-970, Jacksonville, FL 12:00-1:00 am EDT. E-mail:wgsr1570@nrcdxas.org

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

For what it's worth, Mr. Schultz is not part of the Air America operation...he's syndicated separately by Jones Radio (in an unusual arrangement...I believe a left-leaning group actually bankrolls the syndication for Jones).

XM picks him up instead of 3 out of Randi Rhodes' 4 hours. They moved him (or are moving him) from the "Buzz" channel, which becomes "America Right" on Monday. One of the other AA affiliates, Clear Channel-owned KPOJ/620 Portland, also carries Ed Schultz separately from AA.

Alan Colmes (Fox News) is also on the XM "America Left" channel, pre-empting some of AA's programming in his live slot of 10 PM-1 AM ET.

## 886. WFAN 600 Hum?

Newsgroup: rec.radio.broadcasting
Date: 2004-04-05 16:19:20 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <c4s0u8$otu$1@xuxa.iecc.com>
Source record: 5527

What's the likely cause of the 120 Hz (+harmonics) hum on WFAN's
signal, that's been there for a few months?

It's in the difference channel, between the upper and lower sidebands.
If you listen to both, you won't hear it. But listen to USB or LSB
alone and it's quite strong.

Some phase modulation of the carrier? An ancient stereo system
feeding in hum?

Hallo again.

This is specialy for John Umar and Philip.

I just finish the building and testing of my 4CX5000 final.
Buy the way....I build the Broadcast Electronics version.
Today i tested the amp with an driving power of 150 Watts and the
output power was 8000 Watts. It ran it on 7000 volts and it consume
about 1.8 amp.
I alsow find out that the tube is not a 4CX5000A but a 4CX5000J/8909.
I measure the filament current so thats wy the 10.000 watts is not in
reach.
The difference between these tube's is the maximum frequency range.
The 5000A runs till 220 mhz and it's brother...the5000J runs till 100
mhz.
But still i feel pretty good about this project.
If You wanna see a picture of this final amp just mail me and i will
send You one.
Thanks for advising and supporting me.

Greetings from Holland.....Onno

## 889. WJR no longer in stereo

Newsgroup: rec.radio.broadcasting
Date: 2004-04-05 16:19:22 UTC
From: burnsste@msu.edu
Message-ID: <c4s0ua$p07$1@xuxa.iecc.com>
Source record: 5523
Cross-posted to: rec.radio.broadcasting,alt.radio.broadcasting

While its stereo equipment may not be completely turned off, around 10 PM on April 2 I noticed that WJR-760 Detroit no longer has stereo separation during its commercials, promos, ID and music. The switch to mono was sometime between March 27 and April 2.

Could this have something to do with the station's recent posting of an opening for a new Chief Engineer?

Given that WJR had broadcast in stereo for some 20 years, this is hardly an encouraging sign for the status of AM Stereo within the industry.

Number one is Citadel's WTMA on 1250?

Just a guess....(c;

TMA's sister station is WTMZ 910. It's a bit of a shock for the
visitors to Charleston to hear "good music" on AM, but that's what's
on there. It failed, miserably, as news-talk, sports, sports-talk,
and some other formats. Not sure it shows up in the rating book,
though. The locals all listen to it over 40 years old. Reminds them
of Harry Weaver's old WOKE on 1340 I used to work for part-time when I
was a Navy sailor. That station actually had a STUDIO, complete with
a Steinway grand! There was a big sign up over the board we all had
to stare at all day. "If in doubt, DON'T do it, DON'T say it and, for
God's sake, DON'T PLAY IT!" Harry, the station's owner and VERY
conservative, WAS listening to what you did. I think he had the first
speed dial phone in the world...(c; It never made the ratings book,
either, but I spent many happy hours sitting at our little home-made
console with two old transcription players and 2 cart machines in the
middle of Diana's Dress Shop window on King Street actually feeding
the station audio into a telephone loop from a permanently-installed
jack in the wall direct to the station. For a young kid, ratings or
not, this was RADIO in 1968.

Hand me that Harry James album, would you? Lemme cue it up on 2.
It's next on the air after John, our silver-tongue, dashingly dressed
radio personality those two ladys are blushing over across the room on
the other end of the mic cord interviews a customer on why she's
buying that particular dress from Diana's. Thanks.

Wireless mic on the end of a Marti in the van my ass.....That ain't
radio!

RESCUE RADIO: VK HAM BRINGS BOAT TO PORT SAFELY - BY RADIO

A pair of Australian and American hams are credited with being a lifeline to a storm damaged boat with six people on board. The Australian was at his home QTHand the American was at sea on the stricken ship. Q-News Robert Broomhead, VK3KRB, in Waverly, Australia picks up the story from here:

--

Bernie VK2ABN on March 4 was in QSO with VK2ABT/VK3ACA and heard a weak and distorted signal, KA7MWL Shawn, who was aboard a Ukrainian registered schooner sailing from Wellington NZ to Sydney Aust., sails had blown out and they were making slow progress just on 4 knots.

At that speed they had calculated that they would run out of fuel before reaching port. Bernie VK2ABN ascertained 6 people were on board, BUT NO EPIRB! All this information was relayed to Sea Safety Canberra.

With the schooners satellite communication system also out of action, the Ham aboard, Shawn KA7MWL operating around 5 watts on 7070 Khz was the only contact.

Sea Safety Canberra QSY'd from 8176 kHz to the 40 meter band but as their transmitter was in Charleville, SW Queensland, no contact could be established.

Bernie arranged a for sked in 24 hours time, this time things a lot better, radio and safety wise, the schooner expected in Sydney ahead of previously estimated time.

As Bernie said: "I hadn't realised you can now call MAYDAY on the various DISTRESS frequencies but nobody is listening any more. Since the advent of GMDSS a computer scans the frequencies looking for encoded tones. If it finds one it attracts human intervention."

VK2ABN Bernie says " It was a bit like the Tony Hancock Radio Ham Sketch in retrospect, anyway that's what his wife thought and our telephone sure ran hot for a couple days!"

--

According to Q-News, the Sydney Australia Water Police stayed in contact with VK2ABN to keep abreast of the situation. With no High Frequency facilities that could hear the stricken craft, they were totally reliant on ham radio. (Q-News)

**

THE BPL FIGHT: CLARIFYING FEMA'S CLARIFICATION ON BPL

The debate surrounding Broadband Over Powerline Internet access has taken a new twist. Opponents are now raising fears about the contents of a letter recently released in the FCC's BPL public comment files. It was sent by the Federal Emergency Management Agency's top administrator to FCC Chairman, Michael Powell. Opponents say the letter clearly shows FEMA is now reversing course on its vehement opposition to nationwide BPL deployment. Amateur Radio Newsline's Mark Abramowicz NT3V has the very latest

--

The letter was written by Michael Brown, Undersecretary of Emergency Preparedness and Response in the Department of Homeland Security. That's where the Federal Emergency Management Agency was placed in President Bush's restructuring of agencies related to the security of the United States.

Brown's letter to Powell actually was briefly mentioned in February articles on the FCC's BPL action that were written for two nationally-circulated computer magazines. But it apparently got little notice and its contents were not fully detailed.

Now that the letter is part of the FCC BPL file, its contents are in the public arena.

Brown tells Powell in the letter dated January 8 that FEMA wants to clarify its December filing so it is "not misunderstood or misconstrued."

Brown goes on to say FEMA is aware that some of what he labels "distinct approaches" to BPL may cause interference to FEMA's H-F emergency communications network.

But then, and this is the section that has BPL opponents worried, Brown writes: "However, we continue to study the BPL proceeding and

have not concluded there is a material interference problem or that all of the distinct technological approaches to BPL pose risk of interference."

Compare that to the language in FEMA's December 2003 filing on BPL with the commission prepared by Barry West, FEMA's chief information officer.

West writes: "FEMA has grave concerns regarding the interference that likely would be caused to government communications by unlicensed BPL systems."

Or this comment: "This interference will severely impair FEMA's mission-essential HF radio operations in areas serviced by BPL technology."

In an interview with a Philadelphia radio station, a FEMA spokesman insisted there is no material change in the agency's position.

The spokesman says Brown's letter was sent to Chairman Powell to clarify that FEMA is still studying the issue and recognizes and supports the FCC's desire for a greater broadband capability for the nation.

The spokesman says Brown wants to see more studies on the interference issue and is working with other federal agencies.

However, the FEMA spokesman emphasized that any deployment of BPL should not pose an interference threat to the agency's H-F emergency communications network.

Those close to the BPL debate say Brown's letter, has only muddied the agency's position and sections could be embraced by both sides.

We'll let you decide.

Come to our website: www.arnewsline.org and click on this week's script and select the Text script and scroll to this report to find the internet U-R-Ls leading directly to Brown's letter and FEMA's original December filing.

(Letter from Michael Brown, Undersecretary of Emergency Preparedness and Response, FEMA. January 8, 2004)

<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6516083909>

(FEMA's December 2003 filing)

<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6515292045>

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--
In a communication posted to members of its Public Relations Reflector, the American Radio Relay League suggests avoiding references to the FEMA position for now in any BPL discussions or comments. (ARNewsline(tm))

**

THE BPL FIGHT: BIG NOISE IN MANASSAS

BPL has come to Manassas, Virginia and the hams there say that its not fun to listen to:

--

BPL audio

---

That's the racket being created by the latest of three Broadband Over Powerline or BPL installations opened in Manassas. This, as provided in a sound file on the www.W4OVH.org website, courtesy of George Tarnovsky, KE2AM. The interference level appears to be such that it would be all but impossible to hear a radio signal through it.

The kicker here is that this is reported to be an underground electrical feed that utilities claim are far less noisy than overhead wiring. However, having the wires underground does not seem to reduce the interference. At least not in this case.

And if you want to know more about the BPL hazard to America's communications, go get a copy of the of CQ. Joe Lynch, N6CL has an excellent analysis article in his "VHF Plus" column in the just out April issue of that magazine. (VHF Reflector, PR Reflector, W2VU)

**

THE BPL FIGHT: SOUTHERN OREGON GOES GLASS

Meantime, to the West in Oregon there's some good news on the BPL front. It comes from southern Oregon where the obnoxious radio pollution of BPL has lost out to quiet fiber optic delivery.

According to Doug Beck, K6ZX, in the town of Merlin, a private company, forming public and private partnerships with local government has wired the city of Ashland with what's called the Ashland Fiber Network. It has also extended fiber to the city of Medford with some 74 miles of glass cable connecting all schools to provide VOIP audio and video conferencing.

But that's not all. The partnership is also in the process of connecting to Grants Pass and will wire all the local schools and government offices as well. The best part is that all excess bandwidth is being made available to local citizens and wireless last mile technology is being explored to connect rural users.

Beck says over the VHF Reflector that the area is aiming to have a broadband connection available to all rural users without any Broadband over Powerlines in the area. (VHF Reflector)

**

Break 1

>From beneath the Southern Cross in Auckland, New Zealand and from our studios in Los Angeles, California, this is the Amateur Radio Newsline, heard on bulletin stations around the world including the Metro Atlanta Telephone Pioneer Amateur Radio Club net in Atlanta Georgia.

(5 sec pause here)

**

RESTRUCTURING: SWEDEN GOES CODE FREE

It now looks likely that Swedish radio amateurs with a Class 2 license which is the equivalent of our code free Technician class, will be allowed to operate on the High Frequency bands as of early April. The decision to drop the Morse code requirement for an HF bands license in Sweden had been postponed from the 1st of January. A note in the March issue of QTC, the Swedish national society's magazine, suggested that on or about April 1st is when the change will be made. (GB2RS)

**

ENFORCEMENT: NO "DELIVER IT" ON 2 METERS

Using an illegal long range cordless telephone to deliver culinary delights is going to cost a New Jersey Chinese restaurant a good part of its profits. This, after the FCC levies a $10,000 against the eatery for operating transmitting equipment on 2 meters without a license. The FCC's Daryl Duckworth, NN0W, has more:

--

Duckworth: "A Notice of Apparent Liability to Monetary Forfeiture in the amount of $10000 went to Best Wok of Westville, New Jersey. An agent of the Philadelphia office had DF'd the signal on 145.8376 MHz and inspected the base and mobile units. The restaurant manager stated that he had purchased the long range cordless telephone system in another country and brought it to the United States to operate at the restaurant."

--

The FCC citation issued to Best Wok indicated that the telephone in question is not FCC Part 15 certified and is illegal to use in the United States. (FCC, RAIN)

**

ENFORCEMENT: IT AIN'T USER RIGHTS

A California ham is the latest to be told by the FCC that if he wants to challenge a repeater operators authority to kick him off a system, he will have to do it elsewhere. That the FCC will nor reconsider the matter.

The situation involves Mark A. Glover, KE6TTL of Garden Grove. Apparently, Glover has complained to the FCC about his being banned from using a repeater owned by the Catalina Repeater Association with the apparent blessing of the FCC. This in a letter from the regulatory agency to Glover back on February 2nd.

In responding to Glover's February 26th complaint, the FCC says that its letter of February 2nd explained the right of the repeater association to make such a request. Also, if Glover has an objection to the decision of the repeater owner, that he is free to pursue legal action locally. But says the FCC it won't be involved. There are no Commission hearing procedures are provided in such matters. (FCC)

**

ENFORCEMENT: TWO PEOPLE - ONE CALL

The actions of a New York ham in obtaining a call sign have come under FCC scrutiny. Again, the FCC's Daryl Duckworth, N-N-Zero-W:

--

Duckworth: "A letter went to Frank C. Richards, KG2IJ, of Moers New York concerning an application filed in 1995 where he requested the call KB4VU be changed to the next systematically assigned, to change his address to New York, and to renew the license. Frank C. Richards of Ft. Meyers, Florida, claims that he is the real licensee of KB4VU, and filed no application for a call sign or address changes and has never lived in New York."

--

The FCC says that this raises questions about abuse of the licensing system and the agency is investigating. It has asked the New York Richards to provide documented information on where he previously lived in Florida, when he moved to New York and all FCC Amateur Service licenses that he previously held. (FCC, RAIN)

WITH NEWSLINE: MENTORING PROGRAM UNDERWAY

Joe Eisenberg, K0NEB, who is running the database for the Roy Neal, K6DUE, Amateur Radio Mentoring Project says that the first matches have been made. These are in California with one being an e-mail only contact due to distance.

Joe says more match-ups are on the way. Hopefully as the database builds we will be able to make all matches face to face.

If you want to volunteer for the program or are in need of an Elmer to help you learn more, just e-mail us. The address is mentor@arnewsline.org. (ARNewsline(tm))

**

HAMFESTS: GAITHERSBERG - RIP

Some news from the hamfest circuit. After struggling to rebuild attendance from two moves the past four years, organizers in Maryland have canceled the 2004 descendant of what was once the popular "Gaithersburg Hamfest." This was a show that dated back to the 1950s. Amateur Radio Newsline's Newsline's Paul Courson, WA3VJB reports from Annapolis:

--

"There appears to be no support for this event from the member clubs of the Foundation or their respective members," according to Dan Blasberg, KA8YPY, president of the Foundation for Amateur Radio (FAR).

The group consists of a coalition of ham radio clubs in the Maryland, Washington, and northern Virginia region, and has used hamfest revenue to fund scholarships. In recent years it co-sponsored the event with one of its member clubs, the Columbia Amateur Radio Association (CARA).

Expressing his dismay that only two people had stepped forward from FAR to help stage the hamfest that had been scheduled for Sept. 11th and 12th Blasburg, said the lack of volunteer help is "not fair" to "carry the burden of a project of this magnitude and scope."

Blasburg concluded "it has been decided by the leadership of FAR and CARA to cancel Fall-Fest 2004 (due) to lack of volunteer participation." His note initially went out on an email reflector and since has circulated widely.

Blasburg this past week was hopeful his note would prompt people to step forward to help, but then, on March 27th, hamfest officials were openly talking about the cancellation and the withdrawal of the site reservation in West Friendship, Maryland.

What used to be the popular Gaithersburg Hamfest relocated to a parking lot outside a baseball field in Bowie Maryland in 1999, struggling as a local fleamarket no where near the size of the original site. A move to the Howard County Fairgrounds in 2002 did not help matters much, with attendance gaining marginally.

With the old Gaithersburg Hamfest now GONE, the successor as the largest in the mid-Atlantic region may now be the Timonium Hamfests at the Maryland State Fairgrounds north of Baltimore, where two clubs

sponsor a Spring and a Fall Timonium

Paul Courson, WA3VJB, Annapolis reporting for Newsline.

--

Thanks Paul. (ARNewsline(tm))

**

HAMVENTION 2004: THE FCC WILL BE THERE

Some much more positive news comes from Dayton, Ohio. This with word that two of ham radio's most popular speakers will be back at Hamvention 2004. Of coarse we are talking about the FCC's chief ham radio rules enforcer Riley Hollingsworth, K4ZDH, and FCC rules man Bill Cross, W3TN.

The two were missing from last years Hamvention due to a scheduling snafu. As planners put together this years outing, the duo was among the very first scheduled in. You will find them holding forth from on Saturday, May 15th from 10 a.m. to noon in Hara Arena Meeting Room 1. If you want to know exactly what's happening at the FCC and how it will affect ham radio, this is the event to be at. (ARNewsline (tm), Hamvention(r))

**

HAMFESTS: THE URUNGA RADIO CONVENTION

And speaking about hamfests, heres on that's a bit unusual. Its the annual Easter Convention scheduled for Saturday the 10th and Easter Sunday the 11th of April at the Senior Citizen's Hall in the city of Urunga, Uganda. Events include a 3.5 MHz mobile hunt, pedestrian on 2 meter T-Hunt, a 2 meter mobile multi transmitter hunt and lots more. Sunday will feature the famous Urunga scramble. A mini contest to see who can make the most contacts in 30 minutes. Its a great show, if you happen to be in Uganda an Easter weekend. (Q-News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM HELP: GET WELL WALLY

Unless you live in the American West where this newscast is produced, you are not aware of the contributions of Wally Foster, N6CDJ. Those who do know that Wally has been a huge contributor to ham radio in the state of California.

Over the years, N6CDJ has been responsible for thousands of hours dedicated to installing the region's packet radio system. He has also introduced many to packet and APRS and volunteers a lot of time to emergency services, fundraising, climbing towers and doing a first-rate job with repeater and station installations.

Wally's in a tough personal battle right now. Please drop him a QSL with a "get well Wally" message top help keep his spirits up during a trying time. You can send your wishes to N6CDJ at his callbook address. (AA6JR)

**

EMERGING TECHNOLOGY: MESH NETWORKS RADIO RELAY SYSTEM

On the emerging technology front, Mesh Networks, whose emergency-response devices communicate through each other rather than through a centralized command is expanding its technology. This, to work on other kinds of wireless equipment including radios used by emergency service communicators. Rick Johnson, KA9VZD, has more:

--

Originally developed by the U.S. military, Mesh system of networking lets individual radios serve as repeaters and relay points. This means that a firefighter too far inside a building to reach his command post can communicate with a nearby firefighter, whose radio will then repeat the conversation to the next closest radio. This is similar to hams using a programmable mobile radio to extend the hand of their 2 meter or 70 centimeter H-T..

And just like hams have been experimenting, Mesh networks can transmit video, data and position information in addition to audio. But heres the departure fronm what radio amateurs are doing. The Mesh technology also has the ability to create super-sized Wi-Fi hot spots. This in itself gives the system wide utility in public service applications.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, reporting.

--

Mesh Networks says that it is recognized as the leading developer of high performance and scaleable mobile ad hoc networking technology. More about the company and its products is on-line at www.meshnetworks.com. (Press release)

**

HAM AWARDS: THE VP5 YOUNG CONTESTER

If you are age 18 or younger, a licensed radio amateur and have been dreaming about going on a D-X contest, listen up. This next story is for you.

For the second year in a row, a competition has been announced for keen young contest operators with just such a dream. The winner gets an all-expenses paid trip to the Turks and Caicos Islands to operate with the VP5X Contest Group in the CQ World Wide DX phone contest this October.

Applicants must send an essay of 500 words or more telling how they got started in ham radio. It also must describe the person who helped them get started in the hobby and why you should be selected for this contest DX'pedition to VP5.

The winner must have his or her parents' written permission to make the trip on their own. Parents may accompany the winner at their own expense. All entries should be sent by e-mail to contests@vp5x.com by the 31st of August. (GB2RS)

**

HAM AWARDS: 2004 YHOTY NOMINATIONS BEING SOUGHT

And while we are at it, its time to announce the opening of the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award. This program is open to any FCC licensed youngster age 18 or younger residing in the contiguous 48 states. One who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

As we have said in years past, this award is not a contest for a prize. The person selected "Young Ham of the Year" is judged on his or her contributions to society through Amateur Radio. By way of example, a youngster whose only claim to fame is that of being licensed as an Extra at age four would not necessarily be judge as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 or 15 year old Novice or Technician running a net during a major disaster or crisis would definitely be given consideration.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st. (ARNewsline (tm))

**

DX

In D-X, W3EF reports that the 3B9C dxpedition has already made over 110,000 contacts and with any luck will soon be the biggest dxpedition in history. He says that besides the sheer volume, this has also been a carefully planned and executed operation with strict attention to details such as propagation on all bands to all

regions. W3EF says it has been an absolute blast with a wonderful team from all over the world. At airtime the 3B9C operation continues. (W3EF)

In other D-X news, word that K5CM, N5KW and W5AO plan to operate portable VP5 from North Caicos island through the 7th of April. The island counts as NA-002 for the IOTA awards. (GB2RS)

Also, F8DVD, will be active slash JW from Svalbard on 80 to 10 meters to the 10th of April. He says that although it will be very hard to make contacts on 80 meters due to the very short night, he will make several attempts to do so. (GB2RS)

Lastly, PA9JJ will be active as C56JJ from Gambia until the 5th of April. Look for him especially on the WARC bands and on RTTY and PSK 31. For all these operations, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: FCC MAY MANDATE IONESPHERIC DELAY

And finally, a little-known provision of a bill to crack down on indecency on the airwaves may directly affect Amateur Radio. It went into effect at 00:01 UTC on April 1st. Roving reporter Pierre Pullinmyleg, F0OL, reports:

--

I'ts a rather -- er -- interesting -- audio only -- April 1st report. To hear it download the newscast MP3 file at http://www.arnewsline.org/quincy If you miss Pierre this week you will have to wait another year before he returns.

--

Thank you, Pierre, and we hope you can get back to warmer weather without any -- er -- long delay. (F0OL)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066 in the U-S-A.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, in Auckland, New Zealand, saying 73 and we thank you for listening. Amateur Radio Newsline is Copyright 2004. All rights reserved.

# 893. It's In The Fridge: Finding Cool Radio Now

Newsgroup: rec.radio.broadcasting
Date: 2004-04-05 16:19:26 UTC
From: scram@bubblegum.net
Message-ID: <c4s0ue$p2h$1@xuxa.iecc.com>
Source record: 5533

http://www.catalog-of-cool.com/coolradio.html

It's In The Fridge: Finding Cool Radio Now

In the introduction to 1993's Too Cool, we invited readers to "dig this book as paper radio." The allusion was to the inspirational role the medium once played: the voice in the night, discovery channel and deliverer of musical epiphanies from the ether.

Radio by and large chucked that role long ago. The idea of an excitement-generating show, action-packed with boss sounds and audio ephemera, is an antique notion. We're basically talking Top 40 AM in its commercial heyday, from the late '50s to the mid-'60s. You'd have to at least be in your late forties now to have any real-time recollection of it.

And yet, such radio--upbeat and rockin', unburdened by the cynicism and cruelty that today claim most dial positions--remains an irresistible dream to many: to hear it, do it, somehow participate in it.

You can still find cool radio. Both of the examples here stream live online, and one is archived, so you can dig it whenever you want.

In Los Angeles, Loyola-Marymount University's KXLU-FM hosts The Bomb Shelter, Uncle Tim McDermott's weekly barrage of R&B, ska, early rock 'n' roll, international Nuggets (plenty of Italian, Japanese and South American garagers), surf, gal-groups and '70s punk. The one-hour show wails wall-to-wall: brief intros and a local calendar are the only interruptions to James Brown and Jack McDuff, Los Straitjackets and a German cover of Napoleon XIV. I don't think I've ever listened to the show without hearing something utterly wild and new to me. Fridays, 8-9 pm PST. Access through http://www.kxlu.com or http://www.live365.com.

New Jersey's non-profit WFMU-FM offers Music To Spazz By. More produced than The Bomb Shelter, Dave the Spazz's program gives you a hit of what '60s shows like Mad Daddy's were smoking: a bubbling cauldron of background noise, weird commercials and fly-by-the-ear bites from old TV and films. At a manic musical pace. On one recent show: Stooges, Hasil Adkins, Modern Lovers, Marvin Rainwater, Little Killers, and the Electric Prunes demonstrating the wonders of the Vox wah-wah pedal. Thursdays, 8-11 pm, EST. Go to http://www.wfmu.org. It's archived.

New to us: Someone just pulled our coat to Pull The String, a show out of non-profit KSER-FM in Everett, Washington. Van Ramsey's

presentation is low-key, but the puddin's hot. What we heard on a recent PTS: Buck Owens and Hank Penny, Deke Dickerson's Ecco-fonics (a burnin' version of Leiber-Stoller's "Hatchet Man"), Screamin' Jay and Cab Calloway. And a commercial for AIP's great 1972 Frogs flick, starring Ray Milland. Get strung. Saturdays, 2-4 pm, PST. http://www.kser.org.

The dearth of cool radio these days makes programs like these rare, precious, almost heroic. On a good night, with the volume up, they'll make your radio throw off steam. - Gene Sculatti

---

Hear Here: Vintage Cool Radio

We've touted some of these sources before, in our TALK TALK chapter, but we reprise 'em here as a service to newcomers who might want to check out vintage Top 40 as it actually sounded.

DJ's on CD:
Mad Daddy, Wavy Gravy: Atom Smashin' Zoomeratin' Mello Jello Radio Broadcasts 1958-64 : Cleveland's (and later New York's) Mad Daddy rhymes his way through show intros, song dedications, station ID's and commercials for razor blades and record stores ("Round sounds and none of the square/ The Rendezvous, sonny: Buy your records there!"). A document of an amazing talent.

Dewey Phillips, Red, Hot & Blue: Live Broadcasts from 1952-54: The first DJ to play Presley ("That's Allright, Mama," 1954), Memphis' Dewey Phillips speed-raps a blue streak, exhorting audiences "Let's wake up!!!" as he sings with, over and through the raw blues he spins. Superhuman but definitely of this earth.

Wolfman Jack, Howlin' On Air: XERB Radio Broadcats from 1968-70: Still crazed after all those years, Wolfie roars and cackles, breathes new life into oldies and braves his way through phone calls (the best part of this CD) and corny bits ("Wind-up Wolfman"). And, like Daddy and Dewey, spiels: "Just stack up that Country Club [malt liquor] and enjoy yourself!"

(The Aircheck Factory has an enormous inventory of radio airchecks for sale.)

Online Action: Among numerous sites offering radio airchecks online, we especially dig www.philaradio.com (Philadelphia area) and www.reelradio.com (national). --G.S.

Cool Radio Then (1984-88)

Like we said, lots of folks have wanted to do cool radio. Us included. Details on our vainglorious fun-run are available by clicking on The Cool & The Crazy button below. --G.S.

Dr. Demento

In 1970, mild-mannered record geek Barret Hansen became a DJ at Pasadena, Calif.'s KPCC FM, with a half hour rock rarities show. The audience response to the more humor-based records Hansen played inspired an all-humor playlist and a new identity, and he became Dr Demento. It caught on, big time and quickly, and Dr. Demento became a syndicated radio superstar, playing a mix of music so eclectic it defies description--except that it was all funny. If there has ever been a practical example of Unified Field Theory, it's the Dr. Demento playlist. Music of the 1910's rubbed shoulders with whatever comedic music came out last week. For many of us, especially those of us who came of age in the '70s, the Demento show was our first exposure to Louis Jordan and Frank Zappa, or to Jewish and Italian music. It was a broad and eclectic look into what made Americans laugh, and it was always loving and never ironic. The Doctor treated the Shaggs with the same respect he accorded Frank Zappa, which was as important a lesson as the music itself. The show is now coming into its 34th year, still a vital thing in most radio markets.--Skip Heller

Never mind, it's in stereo now! Got a message that the problem was
with the Motorola exciter. I suppose I was ready to assume the worst,
given how other formerly stereo stations have switched back to mono.

For how many of those 20 years has it been a talk station?

Back when I used to listen to it (60's through mid-70's) it had enough of a variety of programming to make it worth using stereo, and none was available. But who needs stereo on a talk station? It's a waste.

Hmm...when did the Texas outfit take them over? Last time I had anything to do with them, they were in nearby Sacramento.

Anyway, there probably isn't a more reliable transmitter on the planet. The tubes suffer physical decay before they fail electrically! The only chronic problem I ever observed (on multiple transmitters) was the constant failure of the feedback resistors in the modulator cabinet. We kept lots of replacements on hand at all the locations.

Unfortunately, I suspect that the big tubes (4-1000A, 4CX5000) are not cheap to replace. The ceramic tube can be rebuilt, but that isn't dirt cheap. They all, however, last a long, long time.

Oh, and you might want to determine which high-voltage delta/wye contactor your unit has and if it doesn't already have it, get the vacuum switch. The clunky one that uses big ceramic insulators always blows up.

Why is it a waste? Spots are stereo. Jingles are stereo. Bumpers are
stereo and a creative programmer or engineer could easily make local
interviews stereo by panning each person slightly off center.

If you take most syndicated programming, you're out of luck.

Rich

Music Rotation System 2.5b with Radio DJs on Mind!

Greetings: My name is Norberto and I am a Radio DJ.

I created a Music Rotation System for my own benefit
and my audience. I thought the following information
might be of interest to your staff in specific Radio
Disc Jockeys (DJ's).

Music Rotation System (MRS) version 2.5b is an software
application developed using MS Access 2000 and Visual
Basic. It was developed with Radio DJ's in mind.
Specially, those who originates their own programming
as Radio DJ's in Community or Public Radio Stations do.

Our intent was (and still is) to assist in the
preparation of radio shows taking into consideration
factors such length of shows, tracking of the played
music (avoiding unnecessary repetitions), and
assisting the DJ in the organization of the musical
material; e.g., introducing the song: authors, bands,
solos, music tempo, notes about the songs. It works
great when you want to research your notes and prepare
special shows for your audience.

Now, MRS 2.5b has evolved in a way that it could be used for
the listening enjoyment at home. We have accomplished all
this and still giving the Radio DJs great flexibility to
mold their taste and personal choices into a rotation
system using artificial intelligence. In other words,
facilitating all the functions of today's Radio DJs.

If you think this might interest you or your staff,
click below to obtain more information and/or download
this great application.

http://www.geocities.com/norberto95aolcom/MRS.html

PD - I would appreciate if you may print this email
and post it into your bulleting board.

Thanks.

How many talk stations use the creative programing you suggest?

Would not think the spots etc. are sufficient reason to have stereo if the main program is null to stereo.

## 906. Re: best software for radio station

I use otsjuke at my home as well...only i'm not really thrilled with the processing. It's not as good as a broadcast processor, but it works for keeping the sound card sane.

Ots is great at mixes...which is why I use it.

Back "in the old days" at my first commercial radio job we had a Sunday morning program with a preacher and a trio or quartet at an FM station in Urbana, Ohio -- COL since changed to Springfield. I would set the preacher up on the left channel and the singers on the right channel. I thought it sounded pretty cool at the time. But when you're 17 and in radio ANYTHING is cool.
The second or third Sunday I was there while the preacher was on the air, his well endowed niece tried to corner me while I was choosing records for my show (yeah, free format MOR!!). I was having a bit of fun until she told me she was only 14. My first and only encounter with a groupie.
I always wondered what happened to her.....

# 908. Minnesota Public Radio does Real Estate?

Newsgroup: rec.radio.broadcasting
Date: 2004-04-08 16:26:04 UTC
From: scannerstan@yahoo.com
Message-ID: <c53ues$caa$1@xuxa.iecc.com>
Source record: 5548

Hi, Scanner here...can somebody help me with this?

MPR bought a mansion for 1.6 million, which they plan on renting out( I read it in Twin Cities Business Journal). Does anybody know how they did that? Were membership dollars used? It's about as much as they raised their last pledge drive, so did they really use the money for this house and not programs as they said they were? What gives?

I'm less than enchanted with MPR these days. Since they decided they wanted to be a national network like NPR, PRI and Pacifica (my absolute favorite show is Democracy Now!), they've gotta be making money hand over fist: a friend of mine in NC says it costs his station $14,000/year to carry Garrison Keillor. Also, it seems stations now have to pay MPR some huge fee just to take their shows (Why? Special equipment?)

Anyway, they always seem to be asking for more money, and yet they're getting more and more from selling their shows: and now this house thing. Can anybody explain this to me?

## 909. DX test Results

Newsgroup: rec.radio.broadcasting
Date: 2004-04-09 14:51:02 UTC
From: ircamember@ircaonline.org

Source record: 5550
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Here's the results of the most recent DX tests that have been received here:

Thursday, April 1, 2004 - WTBQ-1110, Warwick, NY tested 5:15-6:00am EST:

The only reports I received about this test were from those that were unable to hear the test; these included Russ Edmunds of Blue Bell, PA and Mike Hardester of Jacksonville, NC, who both had too much interference from WBT in Boston; Wade Smith in New Brunswick also mentioned problems with WBT, but also had CBE to deal with, and Eric Berger in Detroit, MI had WBT and KFAB taking over the frequency.

Sunday, April 4, 2004 - KEVA-1240, Evanston, WY tested 12:00-1:00am MST:

For this test, the only reports I received were from those that HEARD the test. Darwin Long in Thousand Oaks, CA heard the test, as did Patrick Martin in Seaside, OR, Tim Hall in Chula Vista, CA, Bruce Portzer in Seattle, WA, and Steve Ratzlaff in Elgin, OR (NE Oregon), who sent a detailed description of the CW. Pete Taylor of Tacoma, WA wasn't sure if it was KEVA he heard, as he wasn't able to make out the CW he heard.

That's all for now...

Lynn.

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EST - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Sunday, April 11, 2004 - WNNR-970, Jacksonville, FL 12:00-1:00 am EDT. E-mail:wgsr1570@nrcdxas.org

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

I doubt if you could get a new shunt excited tower licensed today.

However, in the mid-1960s Broadcast Engineering had an article (or was it articles) on shunt excited towers.

Thanks heaps guys,

I'm in the land down under. We have here a licensing category where they issue the top end of the broadcast band between1611 to 1701 for what is called Narrowband Area Services. This in Australia is outside the "official" broadcasting bands. Also we are on 9khz steps here. All this is inline with the ITU rules. So it leaves the gap where you finsh at 1710.

I'm not sure of the exact politics but here we follow the same specs as Europe under the conventions of the ITU. We also have TWO regulators here one for RADIO Emmisions (two ways / CB etc etc etc). The other one "regulates" everything termed "broadcasting". This is the Australian Broadcasting Authority the other is Australian Communications Authority.

As one can see one needs to operate within the other for issueing of TV AM/FM radio licenses. When you ask for a freq NOT within the Broadcasting Bands the fun starts! SW here is not concidered viable but the ACA sees alot of HF Spectrum going to waste so issues TXer licenses. The same thing happened with the little golden bit on top of our Broadcast Band 1611 to 1701. The ACA will issue licenses to TRANSMIT on them under specs less than broadcast and more like a two way quality (no one does though).

By definition you are operating a "broadcasting service" as seen by the ABA,but you don't need to worry about the ABA's silly rules as you are not under their area of control. If they really want to get you they could, on content regardless but you are not running an illegal TX this is covered by the ACA.

Station X runs as a netcaster currently from Australia. I've got a few of these NAS licenses at 400 watts and one SW on 2368khz designed mainly for domestic HF coverage.

There is not much available in Australia on tricky aerial designs. The station is not any really big operation so the investment needs to be comparible. Setting up a 40 meter mast (although needed ) is not going to happen. We have an interesting rule here for town planing that says Amateur Radio operators can erect a tower up to 100 feet without council permisssion. If it was for commercial purposes no dice needs approval----oh dear?????

A power pole and conduit carring the MF wires up with a beam on top some guy wires coming down at 45 degrees sounds like an amatuers setup.

so thanks heaps guys.

www.stationx.com.au to read up on the "X"

>>

The polar plot is not circular (which it is, for series excited towers).

Nevertheless, there is at least one DA which uses shunt excited towers.

Incredibly enough, the day and night patters are mirror images of each other
(null towards the west during days, null towards the east during nights).

The problem isn't with shunt feed in particular. The increasingly popular folded vertical on a grounded base tower is actually a form of shunt feed.

A lot of people associate the term shunt feed with slant wire feed. Slant wire feed is where the problem lies. While there are many of these systems still operating due to grandfathering (KFBC in Cheyenne WY for example) the FCC will generally not allow any new installations with this feed arrangement because the slant wire itself introduces an unwanted directional component into the radiation pattern. However, I have heard that the FCC has allowed a few slant wire feeds for daytime only stations under an STA.

# 924. Amateur Radio Newsline™ Report 1391 – April 8, 2004

Newsgroup: rec.radio.broadcasting
Date: 2004-04-12 01:04:15 UTC
From: radionews@aol.com
Message-ID: <c5cpuf$po2$1@xuxa.iecc.com>
Source record: 5464

Amateur Radio Newsline™ Report 1391 – April 8, 2004

Amateur Radio Newsline report number 1391 with a release date of Friday, April 9th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. It's ham radio versus BPL in upstate New York. Hear the racket for yourself on Amateur Radio Newsline report number 1391 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIFGHT: HAM RADIO VS. BPL IN PENN YAN N.Y.

If you have been wondering what Broadband over Powerline interference will do to your ability to communicate on the high frequency bands, here is a very graphic illustration. Take a listen:

--
Penn Yan NY Audio - BPL Noise
--

That recording of the 15 meter phone band was recently made by Dave Hallidy, K2DH, operating mobile in Penn Yan, New York and posted to the Rochester VHF Society website. It was made the weekend of the CQ WPXSSB Contest using a Yaesu FT-100D transceiver, a Tarheel Screwdriver antenna and recorded at a time when the band was loaded end to end with high power contest stations. And while you cold detect a few of them, the majority were covered up by the BPL grudge.

--
Penn Yan NY Audio With Signals Covered Up
--

In an Internet posting Mark Hoffman, K2AXX, who is Chairman of Rochester group described it as frightening to hear. He encourages all ham radio clubs and other organizations to contributed to the ARRL BPL Defense Fund as a way of fighting this threat to the ham radio bands. (K0BC, K2AXX, K2DH, QCWA)

**

THE BPL FIGHT: TIME TO GO TO COURT?

And Hoffman is not alone in his concern. Others on the Internet are circulating a more drastic approach. Some hams advocate taking the matter to court and try to have the interfering BPL providers charged with being a public nuisance or as a threat to our national security. (Various Internet

Posts)

**

ENFORCEMENT: UTILITY WARNED TO CLEAN UP RFI

An electric utility has been told for a second time to locate and fix an interference problem to a ham radio operator. Amateur Radio Newsline's Bruce Tennant, K6ZW, has more:

--

The FCC has sent a second letter to an energy provider warning it to clean up interference to a ham or face punitive action. The notice was sent directly to Wayne H. Brunetti who is Chairman, President and Chief Executive Officer of Xcel Energy based I n Minneapolis, Minnesota.

In his letter the FCC tells Brunetti that the agency notified him back in December of 2003 that it has received complaints of harmful radio interference possibly caused by equipment operated by Xcel Energy. That this interference has been reported by a ham living in Wellington, Colorado and that Xcel had been given 60 days to let the FCC and the ham know what steps were being taken to resolve the problem.

The FCC says that while Xcel did comply with its directive to respond, but as of the date of the latest letter the harmful interference reported to its office still remains unresolved. So the FCC told Brunetti that the company had 30 days to let the regulatory agency know what action Xcel has taken, or intends to take, in order to identify and correct the source of these radio emissions if they are being caused by its equipment. If Xcel fails to comply it could face enforcement action.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

As we go to air there is no word if Xcel's Burnetti has responded to the FCC. (FCC, RAIN)

**

THE BPL FIGHT: OPPOSITION GOES PUBLIC IN SOUTH AFRICA

BPL is also a big concern in South Africa and that nations national ham radio society has voiced its concern to the public about the introduction of Broadband over Powerline Communications in that nation. SARL -- the South African Radio League did this during the program "Technologic" which aired on Africa's D-S-T-V Business Channel.

Society president Graham Harlett, ZS6GJH, was interviewed at the National Amateur Radio Center. He said that the SARL is opposed to Power Line Communication because of its inherent interference to High Frequency radio communication. He noted that the interference is not limited only to frequencies used by Radio Amateurs. That it includes the military, civil emergency agencies and some broadcasting stations as well.

Harlett, says that extensive tests carried out in Europe, the USA and Japan has clearly shown this. A transmission line that carries power will become like an antenna at higher frequencies and render the high frequency spectrum unusable.

Harlett, who is a managing director of a South African consulting company voiced another concern as well. One that has not really been talked about in the United States. That of ingress to Broadband over Powerline systems from other radio spectrum users including hams. Harlett says that radio transmitters in close proximity to users of BPL are likely to cause interference to them because of the antenna effect of the long, unshielded powerlines.

Technologic was broadcast on Monday March 29th and has been repeated twice since its initial airdate. (Q-News)

**

HAM RADIO IN SPACE: SOLVING HAM-SAT INTERFERENCE

Meantime, the subject of interference to ham radio satellite was one of the topics at the recent meeting of the IARU Region One VHF Managers held in Vienna. Bill Pasternak, WA6ITF, reports:

--

As a result of research performed by OZ1MY, it now been shown that QRM that is occurring to ham radio satellites. Its primarily but not exclusively to 145 MHz satellite uplinks and mainly occurs when the birds are flying over Africa and the Middle East.

According to AMSAT, IARU Region 1 has a Monitoring Service which has been active for some years but which has, up to now, concentrated on frequencies below 30 MHz. In view of the wide area of QRM that can be caused by satellites and their ability to relay signals across international borders, the monitoring team has now agreed to scrutinize the satellite subbands as well.

Right now, what is needed are regular reports detailing instances of interference to the ham-sats along with audio files to back up each claim. The audio files will enable more precise identification of accents and dialects of those heard interfering. Hopefully, this will be a first step in getting those causing the interference off the satellites and off the ham bands as well.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF, in Los Angeles.

--

The IARU Region One Monitoring Service team is said to have good contacts which are used daily to remove intruders from the High Frequency bands. Hopefully they will be able to do the same on VHF and UHF as well. (AMSAT, Others)

**

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N8JFA X-WARN Repeater serving Xenia Ohio.

(5 sec pause here)

**

ENFORCEMENT: FCC INVESTIGATES "PERFECT FIT"

Back here in the United States, the GCC Communicator reports that the FCC has launched an investigation into mattress warmer switching power supplies manufactured by Perfect Fit Industries. According to CGC, these supplies were never Part 15 RFI tested
and have been shown to create large amounts of problems to radio reception. (CGC)

**

CB NEWS: VK CB TELNET NODES ON THE AIR

Some interesting news about C-B -- Citizens Band radio -- down-under. Unlike the United States where C-B operation is hap-hazard with no structure, Australia has a CB Packet Radio System that rivals anything that ham radio has ever set up. And now, it is being linked over the Internet to C-B operations in other nations including many Europe. This is making it possible for Australian C-B'ers to connect with numerous other C-B stations throughout the world using radio and Telnet. Q-News Graham Kemp, VK4BB, has the nodes and the frequencies:

--

AUS002 Warren reports in Australia there are so far several CB Packet Radio Nodes and BBS's. These are AU4BNE Node 27.225 Usb Brisbane Q'ld, AUS011 BBS 27.225 Usb Brisbane, AU6PER Node 476.950 Fm Perth W.A and AU6BBS BBS 476.950 Fm Perth.

For the Amateur Radio Newsline, In Graham Kemp, VK4BB, of Q-News Australia.

--

So if you are scanning the 11 meter Citizens Band and hear digital signals, now you know exactly what they are. (Q-News)

**

RESCUE RADIO: NEW NYC ARES WEBSITE

Some good news out of the Big Apple. The Public Information Officer for New York City District ARES reports that the group has a new web site up and running. Among its features are links to each of the city's 5 borough ARES operations, a contact list of borough District Emergency Coordinators, a news page and much more.

Want to see it? You can. Its in cyberspace at www.aresnyc.org (K2VMR)

**

RADIO LAW: CABLE MAKES DECENCY OFFER

The cable television industry says that it will provide free equipment to allow subscribers to block unwanted channels. This in reaction to efforts on Capitol Hill to curb indecent programming.

Robert Sachs, president of the National Cable and Telecommunications Association, announced the plan at a recent gathering of cable industry executives. The offer is directed to about half the nation's 70.5 million cable subscribers who don't have cable boxes that can be programmed to block certain channels or programs.

The companies agreeing to the plan include the 10 largest in the country and reach 85 percent of all cable subscribers. (Published reports)

**

RADIO ON THE MOVE: WWVA MAY LEAVE WEST VA

Famed AM broadcast station WWVA in Wheeling, West Virginia may soon be heading to a new QTH. This, as Clear Channel Communications confirms that the company has filed an application with the FCC to move long-time 1170 KHz Wheeling radio station out of the state of West Virginia.

According to a report in the Wheeling News-Register, Clear Channel Communications Wheeling Vice President Scott Miller said the company has submitted an application to move the radio station to Stow, Ohio. This is a town located just north of Akron. Miller said it has not been determined whether WWVA will actually be leaving Wheeling, and noted that approval of such applications are extensive.

Broadcast pioneer John Stroebel brought WWVA on the air on December 13th, 1926 using home built 50 watt transmitter set up in the basement of his Wheeling home. By 1929 WWVA had increased power to 5000 watts and became one of the most listened to stations in the East. And, for many years before Clear Channel Communications bought it, WWVA held the honor of being one of the last clear channel coast to coast broadcasters left in the United States. It also helped to make the city of Wheeling famous, worldwide. (Listener reports confirmed by NRCDXAS)

**

HAMFESTS AND CONVENTIONS: VISALIA INTERNATIONAL DX CONVENTION

On the convention circuit, the 55th Annual International DX Convention sponsored this year by the Southern California DX Club will be held April 23 to the 25th. This is the worlds premiere gathering of hams interested in DX and DXing on any band from DC to light. A show that attracts attendees from Asia, Europe, Africa and Oceania as well as from across the United States.

Scheduled events include a contest forum, antenna forum, DX forum along with seminars for everyone from the newcomer to DXing to the seasoned pro. The top of the line manufacturers will be there on their own display midway where you can talk to the people who design and use the best of DX equipment made.

As in previous years, the venue is the Holiday Inn in the city of Visalia, California. For full details visit www.scdxc.org/visalia/ on the World Wide

Web. (SCDXC)

HAMVENTION 2004: AMSAT EVENTS

Two more special events timed to coincide with Hamvention 2004 to report this week. The Third Annual AMSAT "Pizza 'n' Suds" party will be held Thursday evening May 13th. Again this year the venue will be Marion's Pizza at 1320 North Fairfield Rd. The party will begin at 1830 and go until the last pizza is gone! Food will be ordered from the menu and drinks are available at the bar.

Also, the AMSAT Banquet will be held Friday evening at 1800. Location is the Amber Rose Restaurant at 1400 Valley St. in old north Dayton. As with past years the meal will be a buffet with a price of $25.00 per person. Reservations are required and the banquet is limited to 90 people maximum. Please contact Nancy Makley for reservations. Her e-mail is KC8GYW@amsat.org. (N8NUY)

**

HAMVENTION 2004: MEDIA CREDENTIALS

Still with Hamvention 2004, this to members of the working press who are planning to cover the event for commercial television, radio, newspapers or magazines. Media credentials are available to those organizations planning to send reporters. Complete information and a downloadable electronic application are on line at www.hamvention.org. Just scroll down on the left side of the page and click on the word Media. When the page loads, click on the word Media Credentials and follow the instructions that appear. (Hamvention(r))

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH NEWSLINE: NEW SEATTLE ACCESS NUMBER

This note to listeners who get Newsline by telephone access from Seattle. Joybubbles, WB0RPA, tells us he has a new easy to remember number for that line. Its area code 206-333-6397. How is that easier to rember? Try it this way: 206-333-NEWS. And we thank WB0RPA for the information and for sponsoring the line. (WB0RPA)

**

HAM RADIO IN SPACE: ECHO STILL NEEDS $48,000

Turning to ham radio in space, AMSAT reports that as of March 30th it has raised $61,988 of the $110,000 needed to launch the new Echo ham radio satellite. That leaves about $48,000 still needed before the current target launch date of this coming June 29th. Go to www.amsat.org to find out how to donate to this very worthy project. (AMSAT)

**

HAM RADIO IN SPACE: PC-SAT 2 READY TO FLY

Also word that PCSAT 2 has passed its final outgassing tests putting it one step closer to launch. These outgassing tests are some of the most stringent in the space program. They are designed to protest crew members from fumes that might arise out of materials used to construct anything going into space.

Commercial manufacturers who spend millions of dollars to develop space safe materials might want to take a lesson from the hams. All the parts in PCSAT 2 are off-the-shelf ham radio items. The new bird uses Kantronics TNC's and Hamtronics transmitter and receiver boards that include all of the original plastic parts.

PCSAT 2 will go into orbit on the first shuttle when they return to flight next year. Additional information about the PCSAT 2 mission is available at http://www.ew.usna.edu/~bruninga/pcsat2.html (ANS, WB4APR)

**

WORLDBEAT - URUNGA - UGANDA: NO IT WASN’T APRIL FOOLS

Turning to news from around the world we have a correction on a sound-alike from last week. No, it wasn’t an April Fools joke. Again, here’s Q-News Graham Kemp, VK4BB:

--
Audio report only. Hear it in the audio newscast at www.arnewsline.org
--

So how did this one happen? Here is a clue. Try typing Urunga into your spell checker and see what it spits out. This one simply got away in the wee hours of the morning. (Q-News)

**

WORLDBEAT - HOLLAND: SKED CHANGES AT RADIO NETHERLANDS

This for Radio Netherlands listeners in North America. As of Sunday 4th April the station has dropped its 1200 UTC shortwave transmission on 11.675 MHz. Also, last week the station broadcast its morning program on shortwave at both 1100 and 1200 UTC due to the discrepancy in the starting dates for daylight saving time. From Sunday it will be on shortwave for one hour at 1100-1200 UTC on the afore mentioned 11.675 Mhz. (Radio Netherlands)

**

WORLDBEAT - EUROPE: THE 2004 SIX METER MARATHON

The Rientola Radio Amateur Club, operators of station OH3AG is inviting hams world wide to participate into the first Global Six Meter Marathon. The objective of the contest is to work as many DXCC countries as possible between May 8th at 0000 UTC and August 8th at 2400 UTC, doing so on six meters band. The results of this contest will be published during Tampere Six Meters Forum on August 14th when the Magic Band enthusiasts abroad will meet. You can follow this contest and get more information on-line at www.50mc.tk (RSGB)

**

DX

In DX, F5NQL says that he has been receiving many QSLs for the 5V7C Togo Dxpedition, but he is not the QSL manager for this operation. The correct QSL manager is Franck Savoldi, F5TVG, whose address is PO Box 92, 94223 Charenton Cedex, France. F5NQL is the DX editor for the French magazine Megahertz. (RSGB)

On the air, SM1TDE will operate from Tanzania mainly on CW, RTTY and SSB. He will be signing his call portable 5H3 through the 18th of April. QSL as directed by the operator. (RSGB)

**

THAT FINAL ITEM: HAM RADIO AND THE AMBER ALERTS REVISITED

And finally, an update to our story two weeks ago about AMBER Alerts. We mentioned that for the most part ham radio seemed to have little interest in this important public notification system designed to help find the victims of kidnappings. Now we learn of at least one Amateur Radio club that's at work preparing to handle AMBER Alerts. It's located in Eastern Pennsylvania where our own Amateur Radio Newsline's Mark Abramowicz, NT3V, is based:

--

Mel Salzman, W-3-M-E-L is the force behind the Dauberville DX Association in Reading, Pennsylvania, getting connected to the AMBER Alert system.

Salzman, Dauberville's president, says he first became interested in AMBER Alert about a year ago and began searching the Internet for information. The system enables law enforcement to issue bulletins to the public about missing or abducted children.

In some states, messages are transmitted by commercial radio stations similar to an Emergency Broadcast System message. AMBER Alert also relies on highway message boards and cable-television systems to get out information.

Its goal: To enlist thousands of pairs of eyes - whether they be motorists or truckers or neighborhood and community residents - to be on the lookout for the kidnapper of a child.

Salzman says he convinced the Dauberville group to put up a "ticker" or scrolling message on the club's website - D-D-X-A dot o-r-g, to display AMBER Alert information.

Salzman also says he has his home computer hooked up to receive instant AMBER Alert notifications, paying particular attention to Pennsylvania, New Jersey, Delaware and Maryland.

Salzman says his next step in connecting the Amateur Radio service to this effort was getting clearance from the club and the blessing of the FCC to transmit AMBER Alert information as a Q-S-T over the Dauberville group's repeaters.
"We have three repeaters," Salzman explains. "We can link all three repeaters if necessary and actually read the description, license plate number, whose been taken, what the guy looks like, whatever information comes through on my e-mail. That's what I'll put out on the air."

Salzman says the instructions are clear to any ham operator receiving the information and making a possible sighting.

"Call your local police, call 9-1-1 and give them the information," Salzman says. "If you happen to see that car or whatever description is out there, the car, what the driver looks like, call the police immediately."

Salzman says the Dauberville club has a modest, active membership, but many others in the region as well as those passing through the area use its repeaters and are supportive.

"We do have an active membership of, I would say, 20-25, and then people that they talk to," Salzman says. "You know how that could just snowballs. Like I said, the more people hear it, the more people are going to be looking, too."

Salzman says he hasn't publicized the Dauberville club's involvement with AMBER Alert. But Salzman says he's now preparing to reach out to other local clubs in the region as well as the Berks County ARES/RACES unit.

Salzman says he's also working to contact local law enforcement officials in greater Reading area to let them know ham operators are prepared to help by relaying AMBER Alert information.

So far, he says, the AMBER Alert system hasn't been activated much in this region. Salzman says that's a good thing. But, he says, the hams are ready if needed. Salzman says February's abduction and murder of 11-year-old Carlie Brucia in Sarasota, Florida affected him and others. Auto mechanic Joseph Smith is awaiting trial in connection with her death.

"I'd just like to really see this get going because it is extremely important. It just tears your heart out when you see these kids being abducted, especially with Carlie (Brucia), like when you find them and they're gone already. So, the more people involved, the better the results are going to be."

AMBER Alert was created seven years ago in memory of Amber Hagerman of Arlington, Texas. The 9-year-old was kidnapped while riding her bicycle near her home and later found murdered.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

If you want to know more about how you can involve the Amateur Radio service in your area in America's Missing: Broadcast Emergency Response - what AMBER stands for - take your web browser to www.missingkids.com. Then click on the words AMBER Plan. Getting a ham-radio assisted AMBER Alert plan started in your town could eventually save a child's life. (ARNewsline(tm))

The only "hypocritical and desperate" thing about the linked article is its author, who is severely put upon because one program on WLIB got kicked out by Air America.

As far as I know, WLIB's ENTIRE SCHEDULE was displaced by AA.

Another so-called journalist of the open-mouth-insert-foot school.

Richard Mullenax is a hypocrytical liar.

I would point out to the peripatetic Mr. Mullenax that contrary to his rabid assertions, Air America didn't steal anything from anyone. Air America has contracted with Inner City Broadcasting, the owner of WLIB (run, by the way, by Pierre and Percy Sutton, African-Americans both) to lease WLIB. Inner City has been losing money on its full-time Carribean programming, and now has an opportunity to make a profitable deal, while at the same time providing a public service to the community of New York, with wide-ranging, informative and entertaining programming. Do black-owned radio stations not have the right to make a profit? Would Mr. Mullenax restrict what Inner City may do with its own property? Or is his problem with the deal more related to the nature of the public service being provided by Air America -- providing a counter to the ubiquitous hail of right-wing hate radio?

The hypocrisy lies not in Air America, but rather in Mr. Mullenax's protestations.

--
"I am afeard there are few die well that die in a battle; for how can they charitably dispose of anything when blood is their argument? Now, if these men do not die well, it will be a black matter for the King that led them to it; who to disobey were against all proportion of subjection." - W.S.

Source record: 5469

Phil,

AM broadcasting here is on the 521 to 1602 khz for normal broadcasting stations. The 2368Khz is concidered a SW freq here although the lowest of them. Yes here it is "shared" with "broadcast" and "mobile or fixed" services. I'm not sure on the exact freq limits but this is the first of the Shortwave Bands as designated by the ITU. It isn't concidered anything too usefull for the purposes of International Broadcasting. That happens from about 5 mhz upwards plus needs to be shared on a time table basis as you would know.

So here we find a lot of long distance two way system for long distance trucking companys and a system here called the Royal Flying Doctor Service. Also a mob that are a FWD club have a network of stations around the country. Alot of this is all done now on Sat phones etc, so the ACA are looking at what to do with stacks of HF spectrum being left dorment.

Here TXers are AWA / Blyth / RVR / Rhode & Shcwarz / Harris -------thats about as far as memory goes for now! ;)

I guess the simple question, shorn of all the rhetoric, is whether Air
America replaced programming by the Coalition of Artists and
Activists or not. Did they (i.e., is Air America now where this
programming was previously)?

I also find this rather confusing. You refer to wide-ranging,
informative and entertaining programming. But I thought we were
talking about Air America?

And he didn't approach the fact that the network is renting two stations in
San Francisco, knocking asian programming off the air there. Yet another
minority. And of course the spanish talker in Chicago. That leaves spanish
music on the air there, however.

## 932. WLIB killed WOWO

Newsgroup: rec.radio.broadcasting
Date: 2004-04-13 15:46:19 UTC

I don't care who owns WLIB. But I will never forgive them for killing one of the best radio stations in middle America. Remember what happened to WOWO, 50,000-watt blowtorch from Fort Wayne that covered 38 states and half of Canada? The owner of WLIB bought them a few years ago, decreased their power and changed their directional pattern just so that WLIB could increase its own power to cover NYC. Then the owners dumped their damaged goods and sold WOWO to someone else.

That was one of the saddest days in broadcast history for me. WOWO used to have an incredible signal here in Kentucky. Back in the 70s, my radio buttons were set on WLS, WCFL, WOWO, and 15 WLAC. And even though they weren't still playing music, I was listening to them steadily every night, right up to the sad night when their strong signal became a noisy whisper.

So as far as I'm concerned, WLIB can take a flying leap into the Hudson River and let us have WOWO back.

Very interesting.

Don't forget Barratt HF transceivers, I have one:-)

AWA must be locally made!

I'm familiar with typical coverage of the above band.

The HF spectrum must be busier here in western Europe than down in the
Pacific. Our UK government do not issue HF broadcast licenses - period.
People have tried, unsuccessfully, to apply.

There again, we now live in a police state.

Thanks for the info.

Remember it well. Before FM played rock, night time AM was all we had.
WKBW / 1510 / Buffalo - Tom Shannon and others.
WABC / 770 / NYC / Cousin Brucie.
WOWO - Ft. Wayne
WLS - Chicago
CKLW / 800 / Somewhere in Canada - came on when our local 800 left the air.
WWVA / 1170 / Wheeling - had to love those pre-profit Stair preachers.

Wanna go waaaaayyyyy back?
WCKY / Cincinnati One, Ohio .. Wayne Rainey and the Rainey Family.

I miss 'em all. :-(

[ Moderator's note: CKLW is in Windsor, Ontario, across the river from
Detroit. They are still on the air and you can visit their website at
http://www.am800cklw.com/ . CKLW-FM 93.9 flipped formats from Oldies to
Adult Album Alternative a number of years ago and became CIDR, 93.9 The River.
When I left that part of the country last year they'd flipped again, to some
sort of Soft Rock format. ]

> the best radio stations in middle America. Remember what happened to WOWO,
> 50,000-watt blowtorch from Fort Wayne that covered 38 states and half of
> Canada?

First, WOWO did not cover 38 states.

There were, at the time of the facilities changes on WOWO, stations with night operations in Kansas City, Anaheim, CA, Portland, OR (50 kw KEX), San Juan, PR and Dallas, TX. In addition, a dominant station on 1190 is KEWK, a 10 kw operation in Guadalajara, Mexico, as well as a half-dozen other fulltimers in Mexico on 1190. WOWO was always directional, going back to when Westinghouse downgraded it a half-century or more ago so KEX could become a 1-B clear channel station. It sent little power to the West, to protect KEX. And KEX did the same so it could run 50 kw. It got a signal into parts of eastern Ontario, some of Quebec and occasionally in the Maritimes... but much of that is Francophone and WOWO was hardly of interest.

WOWO was limited to consistent coverage of maybe a dozen states or parts of them at night, and NE Indiana, South Central Michigan and a piece of Ohio in daytime.

Since very little radio listening is done at night (and hasn't been since the 50's), the important issue is whether the station has decent coverage of the Ft. Wayne market. Even nearby markets and towns, which did not have local stations in the 50's and before, now have, in most cases, too many stations.

A small sidelite on AA. They have evidenly obtained a lease on time
from KBLA, 50 kw DA-2 on 1580 kHz. That station is dual licensed to
Santa Monica and L.A. and puts a tremendous signal in that area, but
out here 11 mi east of the transmitter in the San Gabriel Valley I
can't hear it on any radio in my house day or night and at night it's
lost in the mud on the 210 fwy in East Pasadena==Ted Shireman

No, the owners of the station replaced programming by CAA. With Air America.

By the way, CAA's programming still has a home on weekends.

While I agree that the loss of WLIB to the Black community is a problem I thought the article was so far off base it was ridiculous.

Air America is paying Percy Sutton for his time from 6am to 11pm.

WLIB wasn't making money and Sutton was honest enough to admit he did it for the money.

I remember listening not only to WOWO but to all the other stations in the eastern US and Canada that have been mentioned. My radio of choice was an RCA AA5 from the late fifties with Conelrad frequencies marked on the dial. The one thing I remember more than anything else about WOWO is, of course:

The Fort Wayne Komets
http://www.komets.com/index2.html

Without the website, I never would have known that "Komets" was spelled with a "k".

|
| First, WOWO did not cover 38 states.
|
| There were, at the time of the facilities changes on WOWO, stations with
| night operations in Kansas City, Anaheim, CA, Portland, OR (50 kw KEX), San
| Juan, PR and Dallas, TX.

Ah, the good old days. There was quite a spirited debate in rrb at
the time. As someone who lived in Kansas City at the time, and who
was well aware of what was then KFEZ, I felt it wasn't quite
the crime against humanity that some made it out to be.

At one time, the 1190 in Boulder, CO also had nighttime service with
a DA, but that was given up sometime in the mid 1990s. There was a
about a year in Kansas City when KFEZ was off the air after getting
struck by lightning *during* a thunderstorm in 1990. 1190 was a very
quiet spot on the dial most nights during that time -- or there was
a very low level hash.

Actually, it is only licensed to Santa Monica. It does not put enough signal
over LA day and night to be an LA station.

> and puts a tremendous signal in that area,

Actually, it only covers part of LA by day, and very little of it at night.
At night, a flashlight-thin lobe heads from Alvarado and the 101 fwy towards
Santa M&#65533;nica and the ocean.

>>
... There were, at the time of the facilities changes on WOWO, stations with night operations in Kansas City, Anaheim, CA, Portland, OR (50 kw KEX), San Juan, PR and Dallas, TX. In addition, a dominant station on 1190 is KEWK, a 10 kw operation in Guadalajara, Mexico, as well as a half-dozen other fulltimers in Mexico on 1190.
>>

There were three Class As on 1190: WOWO, KEX and XEWK.

XEWK is grandfathered at 10 kW.

WOWO and KEX were (pre-WLIB) 50 kW DA-N, with three towers nights, the usual complement for a U.S. Class I-B.

Every other 1190 (pre-WLIB, again) is a non-dominant station, and as such they must all protect the secondary service area of all dominant stations. Also, non-domonant stations on first adjacent-channels, 1180 and 1200, must protect the primary service area of the dominant stations on 1190.

Obviously, WOWO's downgrade changes matters a bit. Perhaps a lot.

The primary beneficiary of this is the Kansas City 1190.

If there are secondary beneficiaries, these are likely to be restricted by the existence of the other Class As, which surely aren't going away, to minor adjustments of their existing patterns, rather than dramatic increases in power or astonishing reduction in protection.

Also, Class B 1190 stations anywhere near the U.S.-Canadian border may be restricted by "notified", yet dark, stations in Canada. Those "stations" aren't likely to go anywhere, either.

One will observe that WLIB protects WOWO and a non-existant, yet "notified" station in Canada.

Any west coast 1190 is going to be limited by KEX and XEWK, and Anaheim and Tolleson haven't been able to get around that fact.

That's a reasonable distinction. So should I assume that Air America
representatives did not approach the owners with an offer, knowing
that acceptance of the offer would result in CAA programming being
replaced?

AA has probably had the most successful launch in the history of talk
radio. However, it remains to be seen whether their line-up of mostly
newbies to the talk radio business are going to make it. So far
there's too much talking among themselves and their guests. Too few
real callers. Randi Rhodes is the best

Interesting this is to me Phil!!!!

See in this part of the world WE (Australia) are largely on our own!!! By this I mean the size of this place is mind blowing to most European people. Driving from one side of the country to the other is measured in WEEKS not hours.

Also in a "broad" sence we are as far away from the technologicaly developed countries as you can get without coming back closer. Plus we "almost are" the only ones in the race for the southern hemisphere. Over your way the SKIP potential would be more pronounced. Thus causing the authorities to think the way they do. I got it here when asking for a HF Domestic license on the 2368.5 KHZ.

We tolerate the night time extension in coverage given the d layer. As you know the groundwave is not too favourable so I was asked a lot of suss questions for wanting one.

Here the "general idea" is everything needs to be big to cover enough area to get a workable audience size. So anything that reduces the effective coverage area is not liked too much with the engineering people.

Also I've bookmarked your site. I'm on the hunt for gear to set up the licenses i have.

Regards

Peter

PS AWA = Amalgmated Wireless Australia (I think-----yes local fellas) Also R.M.E. =Radio Manufacturing Enigineers (Local fellas too---not sure if still around)

# 959. New Auction Site

Newsgroup: rec.radio.broadcasting
Date: 2004-04-14 14:43:02 UTC
From: a2zedgifts@bidzfree.com
Message-ID: <c5jilm$8jd$1@xuxa.iecc.com>
Source record: 5499

My Name is Rich I have opened up a Amateur Radio auction site at http://www.a2zedgifts.bidzfree.com/ It is intended for Amateur Radio (Ham Radio) Other categories listed also.

I have been a ham for over 40 years and have had many call signs, worked and lived all over the world. Now have settled down in NY and decided to try our hand at a branded auction site. A few years ago I opened A 2 Zed Gifts business. "A" being the first letter of the alphabet and Zed being the last letter of the alphabet. We were offering just about anything for sale.

For the past few months we were on eBay and just making it due to the high listing fees. The overhead was killing us. I noticed that one of the biggest auctions were Amateur Radio equipment. (I sold most of my station in a matter of days). With that in mind decided to join Bidzfree and open a branded auction site.

The following categories pertain to Amateur Radio (just click on a category and a subcategory will be shown)

Amateur Radio

Apparel

Business & Industrial

Books & Magazines

Collectables

Antiques & Art

Personalizing

Hobbies

Please come over and take a look.

>>
WOWO does have an application for 15 kw nights with a 4 tower DA under its new owners which should restore them to the old I-B status.
>>

No.

That 4-tower DA is intended to further restrict WOWO's pattern, not to increase it, so that Salem may go unlimited time at its Atlanta station (although there are other problems besides WOWO which will impact Salem's plans).

I believe Salem is paying for the new DA, which will be expensive.

So, should this 4-tower DA ever be constructed, WOWO may well be above the 10 kW minimum for Class A status, but it wouldn't automatically be a Class A unless and until it could prove it actually had a protected secondary service area, which it won't because of WLIB and Kansas City, and Canada accepted the new pattern.

So far, there has not been a case of a significant change in a Class A pattern which was accepted by Canada, save for WSAI/1530, and in order for WSAI to implement that change, protection had to be added to 1520 (WWKB) and to 1540 (ZNS-1) as well as to its intended purpose ... increasing the radiation over Cincinnati.

Well, add WBBR to that list as well.

Canada has a Class A priority on 1130, but not on 1530 nor on 1190.

Nevertheless, Canada is the rate-limiting function here, because of its many "notified" Class Bs.

In South America, there are a lot of broadcasters using the 120 meter
band down in that area. Stations have a very large coverage area, and
often are the only communication at all, so 120 meter and 60 meter shortwave
broadcast is used for local programming.

>We tolerate the night time extension in coverage given the d layer. As you

The night time extension is the wonderful thing about these bands, of course.

How much power are you licensed for? Fair Radio Sales right now has a
bunch of wideband broadcast transmitters for reasonable money. Are there
type acceptance requirements in your country for that band? If not, you
might consider using higher grade amateur gear. Even HCJB is running a
little Viking II transmitter on one band, and it gets out nicely and is
apparently reliable.

Are you sure you aren't confusing them with Pacifica? Not that Pacifica
hasn't gone really quite conservative in recent years. Used to be I could
tune to WPFW late at night and hear extended rants about killing all the white
people, and that's long gone. I sort of miss it, actually.

>"Air America" in 'name' ONLY
>In-Fact Very Ugly American Liberal Elitist in Reality !

Hey, if it gets people thinking and it makes a profit, it's doing better
than most of the other services that come in over the bird. I did notice
a bad buzz when I listened to their feed, though. Also I heard the sort of
pumping that you get when you try to use a compressor as an AVC device.

With 5 or 6 stations? That's a success? And it apparently has been pulled
from Chicago and LA because their check bounced (per news reports this
evening.)

So they are down to 3 or 4 stations. That's a HUGE success!

OK, so do you intend to broadcast with AM on the above frequency?

Musical format, maybe some non copyrighted stuff so no copyright fees?

Had a colleague succeed attaining a UK T & D (Testing and Development)
license for somewhere around your frequency. This was to carry out some
antenna development work. Or at least that was his story!

Played I do believe some old jazz from the 50's which was not copyright.

Now a nice Franklin antenna would do you well for some serious ground
wave coverage. I wonder how tall that baby would be on 2368KHz.

Now I've talked to Aus from my mobile ham station on numerous occasions
on 160m (1.8-2MHz) albeit on SSB.

If your frequency is clear here in the UK there's no reason you could
not be received here under favourable conditions early in the morning.

I searched in vain for both the Aus companies!

I'd be interested therefore what equipment you'll use and if it has to
meet any type approval spec.

there's just not many manufacturers out there who offer broadcast
transmitters that go as low as 2MHz.

Rhode & Schwarz, but don't ask the price.

Contact Brian Blythe in New Zealand:

http://www.blyth.co.nz/index.html

I'm sure you know of his fine medium wave rigs.

I'm his Euro distributor as you'll see.

He may be able to move one of his boxes down there!

I'm afraid it's pretty much impossible for the 'small guy' to get into station ownership here in the UK.

It's for that reason I'm looking to invest in another US 'small-town' AM or AM/FM combo though the fed's allow only a max of 20% station ownership by foreigners.

Hope I'm not boring you to death. We can take this off list if it's upsetting anyone.

I downloaded OTS Juke so I play radio on my computer, and I've got some WLS jingles intermixed with my music. And since the program has an excellent dynamic processor, I try to create the Big 89 sound as closely as possible. I'm still in the tweaking stage (as I have been for over two years).

I don't stream my "station" or anything, just play it for my sake till my wife makes me turn it down.

They added 6 more today. After being on the air all of two weeks. That's
pretty good.

<http://ln-s.net/X3>

> And it apparently has been pulled
> from Chicago and LA because their check bounced (per news reports this
> evening.)

Bogus news reports.

Air America leased the two months prior to their debut on WNTD in Chicago and
KBLA in Los Angeles, and allowed Arthur Liu (owner of the stations) to run
filler during those two months.

Liu, in violation of their contract, leased the LA station during those
two months to someone else. It's as if you rented an apartment from
someone but couldn't move in for two months, so the landlord rents it
to someone else for those two months -- double-dipping.

When Air America discovered this (two days ago) they notified Liu that they
wanted to arbitrate this violation per their contract and stopped payment on
one check for the LA station per their contract. Liu, in violation of BOTH
contracts, cut them off in both LA and Chicago.

So now AA is taking Liu to court. Doubtless, they'll have a TRO in hand and
be back on the air in Chicago and LA a few days.

You can read AA's own rant on the subject at
<http://airamericaradio.com/pub/resNews.htm>, and their stiffer press release
at <http://ln-s.net/X4>.

If you have a really twisted sense of entertainment, you can get your jollies
off AA's court filing at:
<http://www.thesmokinggun.com/archive/0414043air1.html>.

If AA wasn't proving to be such a success, Liu wouldn't be motivated to shake them down like this. They could quietly take this opportunity to get out of their contract with Liu; but they want back on the air, and are going to fight tooth and nail.

Source record: 5416

WKBW / 1510 / Buffalo - Tom Shannon and others. <--- Always 1520, except pre-NARBA when it was 1480. Now WWKB.

WABC / 770 / NYC / Cousin Brucie. <--- Now News-Talk, aping KGO's highly successful format.

WOWO - Ft. Wayne <--- Dead, dead, dead ... but still consuming considerable electrical power.

WLS - Chicago <--- Now News-Talk, aping KGO's highly successful format.

CKLW / 800 / Somewhere in Canada - came on when our local 800 left the air. <--- Windsor, Ontario, but actually intended to serve Detroit.

WWVA / 1170 / Wheeling - had to love those pre-profit Stair preachers. <--- Proposed move to the Cleveland area, with a reduction in night power by about half, and DA-2 instead of DA-N. Will likely require taking 1150 dark to do this.

Wanna go waaaaayyyyy back?

WCKY / Cincinnati One, Ohio .. Wayne Rainey and the Rainey Family. <--- Back at it as WSAI, with "rock 'n' roll's first generation", and sounding very good. Contract religion after 12 am EST weekdays, 11 pm Saturdays and 9 pm Sundays, returning to oldies at 5 am. WCKY call went to co-owned 1360, from which the WSAI call, and apparently the format came. Night pattern changed to favor Cincinnati, the station's present COL, and Covington, KY, the station's original COL (from whence came W-C-KY). Carries lots of ads for businesses and not-for-profits in the Covington area. Also carries U of KY sports. Essentially a "tri-state" focus (Ohio, Kentucky, Indiana), but with little emphasis on Indiana.

I've been in Talk Radio for a long time. Where do you get that it's
"the most successful launch in the history of Talk Radio?" If you mean
the most hyped, I'll agree.

This is press release puffery. It came out of the box with sloppy
production on six marginal signals and is now accused on not paying
its bills, so it's lost Los Angeles and Chicago. Read the "Sludge
Report" on their web site at

http://www.airamericaradio.com/pub/resNews.htm

to see how these TV "professionals" bite the hands, arms, legs and
other body parts that feed them. I'm sure that Artur Liu is chomping
at the bit to put them back on his stations.

Offers like this are made every day. Broadcasting is win-lose
business. If one show comes in another has to go out.

WLIB is a commercial entity. If it's losing money because no one is
listening and they can't sell time, something has to give. Supposing
BET had a radio network and made the same deal? CAA programming would
go, also.

You can't blame Air America for seeing an opportunity and making
something of it.

Rich

Truly cool! Yes, WLS had a sound that was
fatter than my Aunt Mary Kay, with a huge
bottom, to boot! I've visited the WLSHISTORY
webpage numerous times, and played the jingles
and listened to the airchecks, and, while I
was doing so, I realized that it isn't too
common to relieve *happy* memories, but I did.

When I listen to old airchecks of WLS, I relive
fishing with my late father, shoveling snow for
pocket money in those gloomy winters, going to
movies with my pals, and a couple of awkward
attempts at dating.

I hate to quote Carly Simon, but "these are the
good old days." Still, listening to airchecks of
WLS from ages past reminds me of how I came to
be who I am now.

I was feeling nostalgic today, so I went to my favorite WLS tribute site. Most of you have probably been there, but for the newbies, it's a place where you can spend days just listening to airchecks and browsing playlists and other memorabilia.

Right now, I'm in the middle of a John Records Landecker aircheck from 13/5/74 and he's playing Tubular Bells (the theme from the Exorcist) and it's creepy, but in a good way.

Here's the site:
http://user.pa.net/~ejjeff/jeffwls1.html

I don't blame 'em, but this thread has gotten long enough where the
original context, which concerned an article linked to by the original
poster, has gotten lost. The author of the article (which was
admittedly over the top) found some irony in the fact that a network
catering to those who are usually obsessed with multiculturism and
speech outlets for the "disenfranchised" would themselves
"disenfranchise" this type of programming. Another poster (also
above) took issue with this characterization, and it seems to me that
who did what to whom -is- relevant in that context. I also think it's
a reasonable assumption that had WLIB's programming been replaced by,
say, Michael Medved or Mike Reagan, we'd be hearing a lot about the
loss of CAA's "voice" from those who support Air America.

Here's the results of the most recent DX test that have been received here:

Monday, April 11, 2004 - WNNR-970, Jacksonville, FL tested 12:00-1:00am EDT:

A pretty good number of DXers from all over tried for this test - DX season isn't quite over just yet! The test was heard mainly by those in the Eastern part of the US, as might've been expected for a FL test. Hearing the test were Bob Foxworth in Tampa, FL, Gerry Bishop in Niceville, FL, John Hunter in Rossville, GA, Barry McLarnon in Ottawa, ON, Bruce Collier in York, PA, Russ Edmunds in Blue Bell, PA, and Tom Jasinski in Shorewood, IL. Jim Renfrew in Byron, NY mentioned he heard the test amid some WZAN-ME QRM; Mike Hardester in Jacksonville, NC and Steve Francis in Alcoa, TN both said they heard the test with lots of difficulty or just barely. In Largo, FL, Greg Myers wasn't certain if what he heard was actually the test. Andersson Sigvard in Sweden commented that he thought he didn't hear the test and described what he heard; Ron Gitscher, who hosted the test, read those comments and responded that Andersson might've heard the test, but he'd need to hear a recording of what Andersson heard to be sure!

But there were several DXers that weren't able to hear the test; these included Marc DeLorenzo in South Dennis, Cape Cod, MA, who said he heard lots of WZAN-ME; Doug Smith in Pleasant View (Nashville), TN; Patrick Griffith in Westminster, CO; Kevin Redding in Mesa, AZ; Phil Greenspan in Marshfield, MA; Bill Dvorak in Madison, WI; Adam Myrow in Memphis, TN; Bruce Winkelman in Tulsa, OK; Neil Kazaross DXing from Grafton, WI; David Hochfelder in Highland Park, NJ; Tim Hall in Chula Vista, CA and Frank Aden in Boise, ID. Neil Wolfish was on a DXpedition in Burnt River, ON, and he reported that the only station in the mess he heard on 970 kHz that he could positively identify was WGTK in Louisville, KY - Eric Berger in Detroit, MI also heard just that station, while Shawn Axlerod in Winnipeg, MB reported that he only heard WDAY on 970.

That's all for now...

Lynn.

The RCF-1 card is needed if you're using the Texar Prism for
pre-processing before the Orban. I know Mooretronix at 800-300-0733
often carries used Prisms and can probably get you data if you really
need it, and I know that Gentner took over all the Texar stuff and
may have docs.

But I agree with Jon. Unless you're into massively overprocessing your
audio, get rid of the RCF-1.

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EDT - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Understand that networks aren't like they were in the 40 and 50s where
stations plugged in and stayed. Today's networks affiliate on a show
by show basis. When someone says "they added 6 more today" it most
likely means that they picked up one show, probably Franken.

At some point a decision will have to be made about the viability of a
fulltime network if the other shows don't add stations, too. Or,
they'll do what many are doing and run reruns of the same day's show.
The drawback to that is that you can't be topical because the course
of the topic may have radically changed by the time the rerun airs.

As it is, stations that are delaying Franken are getting out of date
information when he deals with issues that are happening as he's
discussing them. Limbaugh, for example, is run live in all time zones.
Only a few stations delay the show and they do it by about an hour,
not another daypart.

Rich

You people who always slag the Texars....it's pretty obvious that you don't know how to use them.

In the times when I used Texars, in just this sort of configuration, it was little trouble to have the LOUDEST signal on the dial (with no overmod) yet sound so much like the source that it was virtually impossible to differentiate between the source and the air product. Before the Texar was the big rage it was in the mid 80's, it was virtually a secret weapon in the processor wars that were running in Pittsburgh....although it's worth noting that most of my competition had them, too...they just couldn't make them sound as good.

Computers are pretty worthless tools when one doesn't know how to use them, either.

It is easy to make a station loud. The trick is to keep people from
tuning out from fatigue. The Texar is the most easily-recognizable bad
processing in the industry (second only to the infamous
Audimax/Volumax). I don't know anyone who cannot spot one instantly on
the air after ten seconds of listening.

I don't call that "transparency".

It's good to see that the unfettered ego is still alive in audio processing. While you're right...the east coast and Pittsburgh, in particular, sounded like crap...still does, for that matter. But one station did stand out for quality and loudness...mine. You don't have to believe me, and I have nothing that requires that you do. But...if you want to believe that your inadequate skills have no relationship to your inability to get an audio processing chain to sound decent and loud with as little discernable tradeoff, it's no skin off my nose.

Just because you can't make them sound good, doesn't make them crap, either. Just admit that you don't know how to make them sound good, since others have no trouble showing that it's not impossible to do.

There are plenty of PDs who don't want transparency, and in fact who
want processing that specifically puts their fingerprint on the sound
and makes it sound different than everything else on the dial. Not
necessarily better, just different.

I don't get it, but then I think the whole loudness war thing is silly
anyway.

I don't know...seems all the good ones are going. I grew up listening to Pat, Ben and most of the WCBS AM crew since the days of " Music Til Dawn" way back when. Pat was a great role model for anyone in radio, past and present. May his legacy live on. ( not to mention a fine name! ;) )

My Condolences to Pat's family and to all at WCBS radio.

Pat Alder
WRNN-TV
Kingston

Retired WCBS anchor Pat Parson dead at 65

NEW BRUNSWICK, N.J. (AP) - Retired WCBS news anchor Pat Parson, whose rich baritone informed and entertained radio audiences in the New York metropolitan area for 20 years, died Thursday at St. Peter's University Hospital. He was 65.
The cause of death was cancer.
The Newark native, whose real name was Pasquale D. Tominaro, joined the all-news station in 1970 and co-hosted the afternoon news until he retired in 1990.
Much of that time, he shared the microphone with Ben Farnsworth, who now co-anchors the morning news on business-talk station WBBR.
"In New York radio, Pat was a legend," Farnsworth said. "He was an extremely talented perfectionist who always wanted to do things to the highest standards."
Parson was " a radio god," to WCBS afternoon anchor Wayne Cabot, who was 15 years old when he wrote Parson for advice on how to get into broadcasting. Cabot still has the letter Parson wrote back and said he followed the pro's suggestions.
"His flair, his debonair style, was like watching a guy in a nightclub act," Cabot said.
In a statement, WCBS Vice President and General Manager Steve Swenson said, "Pat was the consummate professional journalist but also was a great radio communicator. His voice and style were comforting and friendly, yet also authoritative and credible."
Parson graduated in 1960 from Seton Hall University, where he worked at the school's radio station. He was inducted in WSOU-FM's hall of fame in 1992.
He began his career as a newscaster at WNBF in Binghamton, N.Y., and later became news director at WERA in Plainfield.
After retiring from WCBS, Parson built and owned WQNJ-FM in Stafford Township, where he also anchored the morning newscasts until selling the station in 1996.

The Bridgewater and Beach Haven resident moved to Barnegat in 2001.
He volunteered his voice to Recording for the Blind and Dyslexic, served with Big Brothers of Bridgewater and was involved with Literacy Volunteers of Ocean County.
Parson is survived by his wife of 41 years, Dorothy; his daughter, Dana; and her husband.
Visitation is scheduled for Monday at the Cusick Funeral Home in Somverville. A Mass will be celebrated at 10 a.m. Tuesday at Blessed Sacrament Church in Martinsville.
Instead of flowers, memorial donations can be made to the American Cancer Society of Somerset County.

Chris,
That's really nice but unfortunately I cannot click on the boxes to type in my info to signup. and the first link that you provided is a direct link to ABCNEWS. I don't think ABCNEWS would like that if they saw that :)

Sincerely,
Chris Stevens

Is anybody still using reverb on the microphone channels?

Indeed. I was simply countering the statement by someone that "Texars
are loud and yet sound like the original source". The fact is that they
definitely do not. Whether or not a PD would find that coloration
pleasing or desirable is an issue I'll let others debate.

> I don't get it, but then I think the whole loudness war thing is silly
> anyway.

On that, we can agree fully.

And you don't know me, you don't know what stations I maintain, you
don't know my history and involvement with audio processing, FCC
rulemaking, or technical innovation. You have never heard or seen my
work, unless you have visited the San Francisco area. And even then, you
don't know which stations represent my efforts. Yet, you have no problem
assessing my skill level when it comes to broadcast audio. You presume
much.

> Just because you can't make them sound good, doesn't make them crap, either.
> Just admit that you don't know how to make them sound good, since others

Unlike you, I'm not going to brag about how my stations sound. I don't
have an inferiority complex that requires self-promotion, nor do I need
to resort to personal attacks to make my points.

I've given you my assessment of Texars. Take it or leave it. Apparently,
at least more than a few others agree since you won't find very many on
the air at major-market stations.

I'll leave it at that.

Amateur Radio Newsline Report 1392 April 16, 2004

Amateur Radio Newsline report number 1392 with a release date of Friday, April 16th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Iraqi hams put out a plea to keep ham radio alive in that war torn nation and the ARRL asks the FCC to extend the filing deadline on B-P-L. Find out the details on Amateur Radio Newsline report number 1392 coming your way right now.

(Billboard Cart Here)

**

A PLEA FROM A WAR ZONE: PLEASE HELP HAM RADIO SURVIVE IN IRAQ

Even as the bloodshed continues, hams in Iraq are asking their counterparts world-wide to keep Amateur Radio alive in the war torn nation. Amateur Radio Newsline's Bruce Tennant, K6PZW has more:

--

A widely publicized e-mail from Laith Adhary, YI1SRA, in Baghdad asks the worlds radio amateurs for support in keeping ham radio a part of a new Iraq. This, as the June 30th date for handover of the government to local authorities approaches.

Adhary is a member of the Iraqi Association for Radio Amateurs and works at the University in Baghdad. He says that it is urgent that Iraq establish a viable ham radio program in the country before the shift of governing takes place. To accomplish this, Laith and Iraqi Association for Radio Amateurs president Diya Sayah, YI1DZ are asking hams around the globe to and their national societies to a letter of support for the future of the hobby in Iraq.

Both men indicate that this is a time sensitive issue and request support right away.

With thanks to Ian Abel, G3ZHI, for passing the information along, I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline.

--

The best way to make sure your letter of support arrives is to send it by E-mail We have two addresses. Sayah can be reached at yi1dz@hotmail.com and Adhary is at laithtariq@yahoo.com. (G3ZHI)

**

THE BPL WAR: ARRL ASKS FOR FILING DEADLINE EXTENSION IN BPL NPRM

Back here in the United States, the ARRL has asked the FCC to extend the deadline for comments and reply comments by 45 days in the Broadband over Power Line Notice of Proposed Rule Making. Thats E-T Docket 04-37.

The ARRL filing says that it anticipates the National Telecommunications and Information Administration report on B-P-L to go public on or around April 16th. Also, that the current deadline would allow only a couple of weeks at best to evaluate the study's results and incorporate its findings into comments in the proceeding.

Although the FCC does not routinely grant such extensions, the ARRL says that it is important to allow time for the N-T-I-A to conclude its study at B-P-L field trial locations. Unless the extension is granted, the last day to file comments is May 3rd and reply comments is June 1st. (ARRL Bulletin)

**

THE BPL FIGHT: SWL'S VS. BROADBAND OVER POWERLINES

Short-wave listeners can complain to the FCC if a Broadband Over Powerline installation interferes with their reception, but there are some caveats. Amateur Radio Newsline's Gary Pearce, KN4AQ, has the
rest of the story:

--

Progress Energy has made a concerted effort to move BPL signals out of the ham bands in their trial areas near Raleigh, North Carolina. But the systems, which are governed by FCC Part 15 and are prohibited from interfering with licensed services, are still radiating signals across much of the rest of the short-wave spectrum. That's leading
short-wave listeners to ask if they have "standing" to complain to
the FCC, since they don't have licenses themselves.

The - General Council Chris Imlay W3KD says they do, if the BPL signals are interfering with international shortwave broadcasts from other countries, but not if they are trying to listen to domestic shortwave broadcasters. Replying to an e-mail inquiry, Imlay adds that "One does not have to be a licensee of a transmitter in order to
receive harmful interference."

ARRL Chief Executive Officer David Sumner K1ZZ noted that the US is a member of the International Telecommunications Union, whose Radio Regulations require member nations to protect HF communications from harmful interference.

RR 15.12 reads, "Administrations shall take all practicable and necessary steps to ensure that the operation of electrical apparatus or installations of any kind, including power and telecommunication distribution networks, do not cause harmful interference to a radiocommunication service operating in accordance with the provisions of these Regulations."

Reporting for Newsline, this is Gary Pearce KN4AQ, in Raleigh, North Carolina.

--

The bottom line: If you are trying to listen to Radio Netherlands and a Broadband Over Powerline installation covers the station up -- complain to the FCC. (KN4AQ, ARNewsline(tm))

**

HAM RADIO IN SPACE: EXPEDITION 9 HEADED TO THE ISS

The International Space Station's next set of ham radio residents will arrive this month. Expedition 9 Commander Gennady Padalka and Flight Engineer Mike Fincke are slated to launch to orbit from the Baikonur Cosmodrome in Kazakhstan on April 18. They will arrive at the I-S-S on April 21 to replace Expedition 8 explorers Mike Foale, KB5UAC, and Sasha Kaleri, U8MIR.

Padalka is a space flight veteran having spent 198 days aboard the Russian Mir space station in 1999. On the other hand, Expedition 9 is Fincke's first trip to space. Both are hams. Fincke holds the call sign KE5AIT and Padalka is RN3DT.

European Space Agency Astronaut Andr&#65533; Kuipers will also travel to the
Station with Fincke and Padalka and return to Earth with Expedition 8 about nine days later. Padalka and Fincke will then spend about six months on-orbit. Their tasks include maintaining ISS operations, continuing science operations, conducting two spacewalks and operating the ham radio station as time permits. Their tour of duty is scheduled to end in late October when the Expedition 10 crew rockets up to replace them. (ANS, ARISS, MAREX)

RESCUE RADIO: PHONE TUNNEL FIRE BRINGS HAM RADIO CALLOUT

Raynet -- the United Kingdom's version of RACES -- was called on
as
March drew to a close. This, as fire rips through a tunnel carrying
telephone lines across a wide area. Jeramy Boot, G4NJH, is in
Nottingham, with more:

--

Raynet groups in Cheshire, Greater Manchester and Derbyshire were put on standby following a fire in a BT underground tunnel in central Manchester in the early hours of Monday the 29th of March. The fire disrupted more than 130,000 telephone lines in Lancashire, Merseyside, Derbyshire and further afield. Cheshire Police were concerned about the effects on communications, and via the Cheshire Emergency Planning Department requested the availability of Raynet operators to cover the affected area.

The Greater Manchester ambulance service lost landline and radio communications with their vehicles, but were able to use mobile phones as a means of contact. Other difficulties included a loss of 999 calls and disruption to the broadband data network. Large areas of the High Peak area of Derbyshire were without landlines or mobile phones.

Jeramy Boot, G4NJH.

--

The majority of Raynet members were dismissed by the evening of March 29th, but the Cheshire Group and County Controllers were on call through Wednesday afternoon the 31st. Thats when the emergency call in 999 service was finally restored to the worst-affected area of Cheshire. (GB2RS)

**

RESCUE RADIO: TV CHANNEL 16 GOES TO PUBLIC SAFETY AGENCIES IN NYC

On this side of the Atlantic pond the FCC has permanently reallocated 482 to 488 MHz in the New York City metropolitan area to the land-mobile service. This, for public safety communications.

482 to 488 MHz which is also known as UHF television Channel 16 has been used in New York for that purpose since 1995 when the FCC issued a Conditional Waiver of its rules to permit the initial operation.

The entire story is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-80A1.doc
(CGC)

**

RADIO RULES: BY-BY FORMS

And a change of forms at the FCC. Effective with Monday, May 3, the Wireless Telecommunications Bureau will dismiss any applications

filed on an FCC Form 605 issued earlier than December 2003.

Form 605, the Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Service, is the hard-copy version of the Amateur Service application. The FCC has been accepting both older and current Form 605 applications that included room for a Taxpayer Identification Number or a Social Security number. The FCC would then issue the applicant an FCC Registration Number or F-R-N without additional paperwork.

All amateur service applicants must have and use an F-R-N when filing an application such as Form 605 with the FCC. The change does not affect applicants filing on-line with the Universal Licensing System. (ARRL Bulletin)

**

ENFORCEMENT: NEVER UNDERESTIMATE THE VALUE OF CB RADIO

Turning to the enforcement arena, never underestimate the value of an 11 meter Class D C-B radio set in catching a bad guy. Even when the alleged perpetrator happens to be the C-B operator at the controls. Bill Pasternak, WA6ITF, has the details:

--

According to the CGC Communicator, complaints about interference from a citizens band radio led police to the home of one Vernando Malone of South Bend, Indiana. When they searched the premises they found more than $20,000 worth of Nextel cellular telephones and another $20,000 in Motorola phones. Also located was a computer that Malone allegedly used to activate the phones

Malone has now been charged with forgery and theft. This, in connection with what police claim was scheme to fraudulently order large numbers of cell phones, activate them with a home computer, and then sell them on the street at discounted prices.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los
Angeles.

--

Stamp this one 10-4 good buddy. And if you want to read more, its on-line at http://tinyurl.com/ytb3z (CGC)

**

NAMES IN THE NEWS: W4RWG ELECTED PRES OF SERA

On a more positive note, Repeater Journal reports that Roger Gregory, W4WRG, has been elected as the new President of the giant South Eastern Repeater Association for 2004 through 2005. Gregory replaces

Don Williams, W4VT, who has served in the post for the past six years.

The South Eastern Repeater Association -- better known as SERA Incorporated -- is one of the nations largest repeater coordination umbrella organizations providing service to Georgia, Kentucky, Mississippi, the Carolina's, Tennessee, Virginia and West Virginia.
It also publishes the Repeater Journal magazine four times a year. (SERA)

**

CONFERENCE: THE DCC IN IOWA IN SEPTEMBER

The 2004 joint Tucson Amateur Packet Radio and ARRL Digital Communications Conference will be held September 10th to the 12th. The venue this year is the Airport Holiday Inn in Des Moines, Iowa. More on the conference is on-line at www.tapr.org/dcc/. (TAPR)

**

CELEBRATIONS: OARC AS K4H IN MAY

The Owensboro Amateur Radio Club in Western Kentucky will celebrate its 50th anniversary as an ARRL affiliated club. This, by using the special event call sign K4H. K4H will be valid for all club members to use both mobile and from their home station location from May 15th through the 31st.

By the way. Only two members of the Owensboro Amateur Radio Club are still is here from its formation. They are Max Douglas, W4VJV and Jim Rush, W4EWL. Both are were instructors at early Amateur Radio classes run by the club. Also, W4EWL has three "QST Cover Plaque" Awards over the years. (Via e-mail)

**
BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

TECHNOLOGY: KNRC AM IN COLORADO TURNS OFF IBOC

A broadcaster has shut down its A-M stereo system to avoid interfering with listeners of another near-by station. KNRC A-M on 1150 kHz in Littleton, Colorado, turned off the I-B-O-C or High

Definition Radio encoding equipment in response to listener complaints of interference to the signal of KJJD, on 1170 kHz in the town of Windsor.

Rodger Tighe writing in the CGC Communicator calls this is a second adjacent channel situation. He reports that part of the decision to silence I-B-O-C was based on the thinking that interference to a small mom & pop station like KJJD was totally unwarranted since consumers have so few H-D radios in their hands at this time.

Tighe is the Chief Engineer of KNRC. He says that the I-B-O-C encoding equipment is still in the racks and the whole issue could be revisited at a later date. (CGC)

**

CONVENTIONS: THE NAB HAM RADIO RECEPTION IN LAS VEGAS NV. APRIL 21

A reminder that this week, on April 21st is the National Association of Broadcasters `Amateur Radio Reception'. This years `Ham Radio
Reception' will be hosted by Heil Sound, Limited and its well known
owners Bob, K9EID, and Sarah Heil. They would like to invite any and all amateur radio operators who will be in attendance at the NAB show to join them for this annual fun event.

---
Audio Only: Hear it at http://www.arnewsline.org
--

This years NAB Ham Radio Reception takes place Wednesday April 21st, from 6 to 9 P.M. local time. The venue is the Las Vegas Hilton Hotel, Ballrom B. Of coarse, thats in Las Vegas, Nevada. For more information please feel to contact Bob or Sarah at 618-257-3000 or by e-mail to bob@heilsound.com. The Heil's say that they hope to see
you there. (ARNewsline(tm))

**

WORLDBEAT - ALBANIA: FIRST DX COM JUNE 19-20

Turning to news from around the world. Datline Albania where that nations hams will hold their first DX convention this spring. The dates are June 19th and 20th in the city of Tirana.

The actual DX convention will begin Saturday afternoon, concluding with a gala dinner and Sunday morning program. Sightseeing tours of the region will be available on Sunday afternoon. More information will be posted on line at www.za1a.com in the near future. (OH2BH)

**

WORLDBEAT - JORDAN: UK HAMS PLAN VISIT

Robin Bellerby, GM3ZYE, is in the early stages of planning an amateur radio trip to Jordan. The excursion will take place either in May or September of 2005 and will be mainly - but not exclusively - for members of the United Kingdom's Royal Signals, Royal Naval, and Royal
Air Force Amateur Radio Societies. Between 20 and 60 people are expected to make the trip. (GB2RS)

**

RADIO RECORDS: 2413 KM on 70 CM

Congratulations to ZL1AOX and VK3EK for extending the Trans Tasman 70cm distance record. On the 3rd January the two made a path of 2,413 Kilometers using SSB. The previous record was set on January 13, 1998 when ZL2TPY and VK4ZSH conversed across 2402 kilometers on the 432 MHz band. (NZART)

**

DX

In D-X, JE3MAS is in Tanzania for one year and will operate as 5H3HK. QSL as directed on the air.

And the multi-operator T33C DXpedition to Banaba island started on schedule on the 4th of April. The island counts as OC-018 for the Islands on the Air awards program. (Various DX sources)

**

THAT FINAL ITEM: WORLD CLASS T-HUNTING - PART 1

And finally, a question. Have you tried ham radio's version of fox hunting? It's not hard and you might win yourself some medals. Newsline's Joe Moell K0OV has the story of the next Amateur Radio direction finding championships:

--

Most hams know that in Amateur Radio, the term "foxhunt" doesn't have anything to do with horses or hound dogs. Our foxes are radio transmitters and the object of the hunt is to find them with radio direction finding equipment. But what many hams don't know is that the equipment for hunting radio foxes can be very simple and inexpensive. For a two-meter foxhunt in the park on foot, you can do very well by augmenting your handi-talkie with a simple yagi antenna made out of a steel measuring tape and some PVC pipe from the hardware store. For closing in, build an offset-type RF attenuator for about 15 dollars worth of small parts. Plans are on the Web, so warm up your soldering iron. Then maybe you could be like Newsline's Young Ham of the Year Jay Thompson W6JAY, who has won a place on our country's team to the World ARDF Championships. You don't have to be

a super-athlete, just reasonably fit.

To see the USA's best on-foot foxhunters in action, to learn from them, and to try it for yourself, make plans to come to southern California this June. The Fourth USA ARDF Championships get under way on June 16th, with practice sessions, a big two-meter hunt, and another hunt on 80 meters. Come out the weekend before, and you can take part in an optional intensive training camp. It's all being put on by the Santa Barbara Amateur Radio Club and it's open to anyone at any foxhunting skill level, with or without a ham license. If you're a senior, don't worry about trying to compete with W6JAY. Equal medals will be awarded in five separate age category for OM's from under 18 to over 60. There are four similar age categories for the YLs.

For everything you need to know about the Championships, including schedules, registration forms and equipment ideas, point your Web browser to www.homingin.com. That's HomingIn, as one word, homingin.com. I hope to see you there. Next week, I'll tell you about a way to get the foxhunting fun going in your own home town. >From southern California, this is Joe Moell Kay-Zero-Oscar-Victor for Amateur Radio Newsline.

--

More with Joe in Next Weeks Amateur Radio Newsline report.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff
for
nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm
Jim
Damron, N8TMW, and I'm Randy Damron, N8XEA, saying 73 and we
thank
you for listening." Amateur Radio Newsline(tm) is Copyright 2004.

>> Just because you can't make them sound good, doesn't make them crap,

With reference to the actual subject of this thread someone can correct me hear but I do believe there were mod's available also for the Texar's themselves.

I have a pair of Prisms here and also one of their AM Prisms which I've yet to hook-up to a transmitter.

Aside from the above and possibly a subject for another thread (as this one's getting somewhat frosty) I would be very interested in what processing chains people are using on both AM an FM stations.

I'm sure most of you have seen the processor chain photo's on Gary Blau's site:

http://www.w3am.com/audiocha.html

On my very first visits to your country in the early 80's I accidentally tuned into KHJ/KRTH when they were using the latter call letters on AM 930 and their audio on AM literally 'blew me away'.

From what I've heard their audio quality was not typical.

There are a few oldies stations that do, because they're trying to
recreate the sound of the big Top 40 stations of the 60's and 70's.

Super Babe!

4/18/2004

Air-America will fail like the Beatles did.

Quote: Guitars? Nobody wants to hear guitars anymore! Unquote, some record executive in 1962. When the legendary rock band first started out in the 60's, critics predicted they would fail. I think the critics were wrong. For 2 decades now, right wing talk radio was an autarchy. Joe Pine was doing this type of shit way back in the 60's. The appeal of this type of format was the sadistic rhetoric that was spewed by the talk jock. Homeless people were ridiculed as stinky bums. Feminists were portrayed as bull dykes. Environmentalists were made out to be these tree- hugging nuts. Gays were child molesters. College professors were Soviet Communists, ad-nauseam! It started out as a mean-spirted novelty ended up being a well-coordinated propaganda machine that was financed by rich WASP Republicans. You ever notice that all right wing talk jocks say the same thing? They may have different styles, but they sing the same lyrics as composed by Karl Roves writers. Some claim they are independent or just partisans: DOG SHIT!!! So AM radio became a Conservative Pravda. All designed to make you a submissive American. Because Neo-Cons knows what's best for you and never question it you Anti-American scumbag!
About a year ago, there were rumors of a Liberal radio network. All the right wing talk jocks were like biblical characters trying to prevent the birth of Jesus. Abort all pregnant mothers babies. One of the tactics of the right is to spout out presumptive facts. For example: Americans don't care about, "Weapons of mass destruction" anymore. Unless they are the census department, they don't really know how the totality of the USA thinks. Same thing goes for Liberal radio. They claimed the public would not listen to voices on the left. Here comes "Air-America" debuting on March 31 2004. Since they had only 6 stations in the country, the public went to their web site and streamed their broadcast. They broke an all time record on the net for streaming. I don't see that happening for clowns like Hugh Hewitt. Who? So the right wing critics are now saying that the Air-America network won't last another 18 months. Now it's 18 months! Last week they predicted 2 weeks! What are they worried about anyway? Ah the truth?
The lineup is pretty cool. Al Franken, Chuck D, Janeane Garofalo, and Randi Rhodes! I'm hoping they give Jello Biafra a spot. The criticism that Liberals are punctilious and full of bonhomie sugar couldn't be farther from the truth. True, you got your NPR newscasts

and Noam Chomsky, who could put a cokehead to sleep. That's because intelligence was never meant to be entertaining. Think William F Buckley. ZZZZZZZZ. Here comes Randi Rhodes! Ululating the crust off any reactionary shit-head. She's a firebrand that one. And sexy too! If you think she's boring, you are either in a coma or dead.
Air-America is in the honeymoon stage. That's all I listen to now. It's so refreshing to hear voices of reason instead of bellowing white men or sarcastic bimbos on the right. So, it is only reasonable to say, Air-America is saving talk radio!

# 1007. What is the typical price/length of a syndicated radio news contract?

Newsgroup: rec.radio.broadcasting
Date: 2004-04-19 05:22:57 UTC
From: thetechwiz@yahoo.com
Message-ID: <c5vnnh$pli$1@xuxa.iecc.com>
Source record: 5450

How much do commercial radio stations pay for their "top of the hour" news from Westwood One or ABC News and how long do those contracts typically last?

What I can't find out (and I *know* someone in this group will know for certain):

1) How much would a talk radio station not owned by Infinity or Disney/ABC in a Top 10 market pay for a contract with Disney to broadcast ABC News at the top of the hour? How much would that station pay Westwood One for CBS News briefs? (I know stations like WABC in NYC and WBAP in Dallas that are *owned* by Disney/ABC obviously have different contracts for radio news than say, a Cox or Clear Channel-owned station in Atlanta or Chicago.)

2) How long do these contracts last with Westwood One or Disney/ABC? For example, the Seattle market has two major commercial talk stations: KVI and KTTH. KVI acquires their news from Fox News Radio and caters to a politically conservative audience. KTTH also caters to that audience, but has ABC News at the top of the hour and is finding that even their P1s will switch to KVI for 3min at the top of every hour because they perceive ABC News as being more left of center politically. The PD for KTTH has publicly stated that they will use "ABC News for the foreseeable future" but didn't give any indication as to the length of their contract with Disney/ABC.

3) What are the limitations of re-broadcasting those syndicated news briefs by radio stations with Internet streaming audio? For example, can an Infinity-owned radio station with a "click here to listen live" graphic on their website legally stream the CNN Radio at the top of every hour or are they blocked the same way that AFTRA rules block the rebroadcast of Howard Stern over the Internet?

Thanks for the info,

Scott

Hey, we got a station here where the airchain produces so much audible
distortion on voices that the announcer mike goes through seperate and
less aggressive processing (including some bizarre EQ but no reverb)
and is injected into the airchain after most of the conventional processing
chain. THAT is sick.

I made no presumptions on your skills...you did. You stated that Texars were, basically, crap, due to the fact that you couldn't make them do what you wanted. Then you blamed the device, figuring that it couldn't be you.

All I was saying is that it wasn't the device. So it must be you. And (to the other correspondent, Mr de Cadernet) yes, RKO stations always did sound great. Much of what I know I learned from RKO people.

But I have no need for self-promotion. I don't so this anymore, because there's no money in it, nor creativity, nor sole. And one of the reasons why is because, as was noted elsewhere, PDs think that their "signature sound" is actually what the audience wants. I know better. And I quit.

> On that, we can agree fully.

Thanks all for the comments.
I just wanted info on the Texar not to start a war :o)

In my opinion, the urge to process sound makes sense.

Increasing the average audio level (but keeping the maximum constant)
will increase signal to noise ratio, and the perceived loudness,
whether it's for recording, AM or FM transmitting.

As allways there are 2 sides to a coin, in this case the drawback is
listening fattigue due to decreased dynamics and increased distorsion.

In short we make sure we use our recources fully.
Some don't settle for less then maximum all the time, while others
realise that there is a backside to it, and makes a more balanced
setting.

But as the technology matures, most of the gains are allready made and
further advances takes huge efforts and gives only small advances.

At this moment, all cind of metaphysical terms and decription starts
to florish, and I stop listening and turns my attension elsewhere.

I've never used, or tried to use a Texar. My conclusions about Texars
are based on the results obtained by others in this market.

> All I was saying is that it wasn't the device. So it must be you.

I had nothing to do with it. But I'm not willing to believe that a dozen
engineers in the SFBA are incompetent. You can make that assertion if
you like, but I'd like to see you back it up. More than a dozen stations
tried Texar; every one yanked them off.

> But I have no need for self-promotion. I don't so this anymore, because

I know that as well. However, I have managed to influence the stations
under my charge to adopt reasonable approaches to their audio processing.

I guess it is all a matter of individual ability and fortitude. Sorry
you couldn't cut it.

Air America sounds like an extension of the DLC (i.e. barely middle
of the road). We are not supposed to be aware of anything about Kerry
except that he isn't Bush. I didn't hear anything about his "not a
redistributionist" statement made to the rich. I also don't expect
anyone like Biafra to get any reception, except maybe a hostile one.

Sheesh. Talk about mixing metaphors.

None of the WABC jocks screamed, nor were they known as "boss jocks." I don't know what station you thought you were listening to, but it wasn't WABC.

For competitive reasons, broadcast audio processing has become an art. If I had my druthers, processing would be absolutely minimal. That aside, I also concede that there are techniques to keep the signal away from the noise floor that do not seriously mangle the music in the process and can actually give the appearance of dynamic range.

In most major markets, there is at least one station that has figured this out. What you can hear are "soft" passages that are actually louder on the dial than other stations' din of squash, and then when the music swells, it seems to get even louder! The effect is an illusion of dynamics while maintaining an ear-grabbing, highly competitive sound.

> As allways there are 2 sides to a coin, in this case the drawback is
> listening fattigue due to decreased dynamics and increased distorsion.

Indeed. Fortunately, DSP has managed to neatly package sophisticated techniques that could only be obtained in the past with considerable experimentation using combinations of devices. The Texar/Optimod combo was an attempt to pre-package such a technique, but unfortunately the Texar was ill-conceived. Its audio bands were in the wrong places. Its time constants produced more artifacts and fatigue than competitive sound. And, of course, it still relied on the Optimod for modulation control.

> In short we make sure we use our recources fully.
> Some don't settle for less then maximum all the time, while others
> realise that there is a backside to it, and makes a more balanced

As Arlo Gutherie might say, "You can have anything you want..." in a suitable digital processor. In that situation, everything is on the table, and can be handled with a minimum of audible distortion. (But always keep in mind that audio processing, by definition, IS distortion.) With a Texar, you get hardwired, ill-conceived constants.

> But as the technology matures, most of the gains are allready made and

First and foremost, you need to have an ear for work. It is, after all,
all about listening.

If you're a highly rated station in a major market, they may pay you. They'll compensate you for the spots they require you to run. A network spot brings a fraction of what a locally sold spot brings. In one case you have to be very careful. If you don't meet a required clearance precentage, you get no compensation at all.

In major markets every contract is different because of the compensation terms. At WOR we were an ABC Entertainment affiliate but didn't run the hourly newscasts. We had our own news department, but used their actualities and wall-to-wall coverage when necessary. We ran all their spots. Evenings and overnight we ran Mutual hourlys.

When I was at ABC we watched stations very carefully to make sure they weren't running the network spots in low rated time periods. If we found you were running our spots overnight your risked losing your affiliation.

In other markets it's generally barter. You run a certain number of spots per week for use of the programming.

>2) How long do these contracts last with Westwood One or Disney/ABC?

Every contract varies.

>For example, the Seattle market has two major commercial talk
>stations: KVI and KTTH. KVI acquires their news from Fox News Radio
>and caters to a politically conservative audience.

Surely you're joking. We all know that FOX is "fair and balanced" so it's a cruel accusation to say they're conservative. Roger Ailes will sue you or get very upset.

>The PD for KTTH has publicly stated that they will use
>"ABC News for the foreseeable future" but didn't give any indication
>as to the length of their contract with Disney/ABC.

What's his alternative? There can't be two "fair and balanced" stations in the same market. He'll have to figure a way to take FOX away from KVI.

>3) What are the limitations of re-broadcasting those syndicated news
>briefs by radio stations with Internet streaming audio? For example,
>can an Infinity-owned radio station with a "click here to listen live"
>graphic on their website legally stream the CNN Radio at the top of

>rebroadcast of Howard Stern over the Internet?

It all depends on the policies of the network and the stations. Until recently, Infinity didn't allow any streaming. ABC used to prohibit any streaming of its newscasts. There were many cases where broadcast.com had to black out shows because of network restrictions on webcasting.

A correction here: AFTRA doesn't prohibit anything. Advertising agencies found that AFTRA wanted their members to be paid for webcasting if their spots ran in any media other than what they contracted for. It was the Ad agencies that told stations to remove their spots from their webcasts. This is the same situation that would occur if a talent did a TV spot and the advertiser used the audio on radio. It would cost more. Agencies didn't want to pay for webcasting where the audience didn't warrant the extra cost.

Rich

Hi John,

This is an interesting thread, as another former broadcast engineer I thought I'd toss in two cents worth...

John Higdon wrote:

> I had nothing to do with it. But I'm not willing to believe that a dozen
> engineers in the SFBA are incompetent. You can make that assertion if
> you like, but I'd like to see you back it up. More than a dozen stations

In the Philadelphia area we had a number of stations adopt the Texar, and before that the Optimod, and before that the DAP, and before that, well, that was before my time<G>!

In every case there were stations who could make any of the devices sound like their trademark fingerprint, usually excessively loud, and there were stations that made them sound pretty darned decent.

When the Optimod came out the station I worked for was told by our consultants (UGH) to switch from the DAP to the Optimod, and the owner agreed. The other engineers and I were, needless to say, a little miffed, and we didn't spend a lot of time learning how to use the Optimod, and it sounded, predictably, pretty darned bad.

Then the college station where I worked got an Optimod, and for whatever reason, I spent about a month playing with it before I put it on the air. This was before the internet, but I called Orban, and Mr. Orban himself spent quite a bit of time walking me through his design objectives, and a whole lotta other info. (Thanks Mr. Orban!!!).

At that point I invited my fellow engineers at the commercial station to have some fun playing, and we ended up with a pretty decent compromise between the owner and PD request to be the loudest station on earth and our own desire to sound good.

Then along came the composite clipper, and this time we spent some time learning about it before we used it, and while it was audible, we did manage to avoid over-using it.

At which point I left commercial radio...

Still, I have no doubt that one could use the Texar, or any other processor and get really bad results, or really good results. I've heard, but have no direct knowledge, that part of the problem was the people selling the Texar... their focus was on really really loud, to

the point where good wasn't an objective.

> Only if you are mediocre and uninspired. I'm making a fine living in
> broadcast engineering, and I'm enjoying the challenges. Don't blame an
> entire industry for your own inadequacies.

I think that is great... I enjoyed working as a broadcast engineer, so much so that I acted as technical advisior at the college station until this past Decemeber. But after a point the local market really closed down... most stations cut their engineering budgets, and as they got bought one poor engineer ended up taking care of multiple stations... until there simply wasn't much of a market.

> I know that as well. However, I have managed to influence the stations
> under my charge to adopt reasonable approaches to their audio processing.

The ultimate challenge!! Congrats on having the chops, both technically and politcally, to maintain some semblence of influence. It isn't easy!

My other recollection from my commercial radio days was rebuilding the production suite. I was just out of school, and really wanted to make an impression... I gave it everything I had, and through some great coaching and a little luck the new production room sounded so good that it made the air chain sound terrible. The owner and PD were furious, to the point where they were convinced that something I had done in the production room had broken the air chain<G>!

If that wasn't bad enough, I then tackled the air chain, and, as I'm sure you've already guessed, everything I fixed made the rest of the stuff sound worse. Sadly, I started at the sources, tape decks and cart machines, so the difference was really obvious when the air staff would switch the monitors from air to program.

I was fired... but the other engineers explained the situation to the owners (I think because they didn't want to spend their evenings, nights, and weekends finishing the task at hand), and I was re-hired, and eventually finished the job, to everyones satisfaction.

I learned a lot of lessons from that adventure... and they still serve me today!!!!!

Ah the life<G>...

Bill

Sheesh. Talk about mixing metaphors.

None of the WABC jocks screamed, nor were they known as "boss jocks." I don't know what station you thought you were listening to, but it wasn't WABC.

The honeymoon is rocky with the loss of Los Angeles. What you need to understand is that Air America isn't old enough to have a honeymoon and hasn't enough stations to make any impact beyond press release puffery.

As with any Talk network or station, the growth is slow. Air America isn't "saving" anything. It's pleasing you. Period. With fewer than 20 marginal stations carrying perhaps one show (Franken, most likely) it's got a very long road ahead. I wish them luck. I want to see them succeed but they appear to be their own worst enemy. It's been my experience that a company that solves its problems with on air dirty laundry and litigation scares off potential affiliates.

I created the WOR Radio Network about 12 years ago. It took about 6 years to get to the 400 station count and we never paid a penny buying time anywhere. Advertisers generally don't buy networks until they have about 85% national coverage.

Despite what the press releases say, there isn't an industry clamoring for Liberal programming. It's looking for programming that's entertaining and gets ratings. We'll see in about 5 Arbitron surveys whether or not there's an audience clamoring for it. The only station (if they change the call and branding, IMHO) that has a chance for numbers is New York. Even then the WLIB signal is nowhere near comparable to WABC or WOR in the survey areas.

Since Franken is the poster boy and extremely talented, any significant dent in Rush Limbaugh's WABC numbers after those 5 surveys will show there's a market, though even Rush hasn't had the wild success in New York that he's experienced elsewhere.

Rush is handicapped by his loss of passion after all these years. If he escapes becoming a guest of John Ashcroft for drug abuse it'll be a fairly level playing field over the next year in New York.

I assume you are talking about the Optimod 8000. There is an interesting history behind the 8000, which as crude as it is now by today's standards, was revolutionary in its day. When Bob brought his Moduline box prototype of the 8000 by my station and we put it on the air in 1974 (the first time an Optimod 8000 ever saw the light of day on the air, by the way), I was blown away. I had never before seen (or heard) any processor that had such tight modulation control on ALL program material, while sounding relatively open with remarkably natural-sounding high frequencies.

> Then the college station where I worked got an Optimod, and for whatever

> air. This was before the internet, but I called Orban, and Mr. Orban
> himself spent quite a bit of time walking me through his design
> objectives, and a whole lotta other info. (Thanks Mr. Orban!!!).

The 8000 was designed solely and exclusively by Bob himself. It was not a collaboration with anyone. It was created as the result of badgering by some of his friends who happened to be broadcast engineers who insisted that he apply his considerable design skills to solve the problem of modulation control on FM. Bob personally walked you through it because, frankly, he was the only one who knew how it worked at what became Orban Associates.

> Then along came the composite clipper, and this time we spent some time
> learning about it before we used it, and while it was audible, we did
> manage to avoid over-using it.

I experimented with composite clipping just before the 8000 came to pass. I (and others) insisted to Bob that there had to be a better way. But that was well before it was perverted into a processing technique. I simply used it to shave off the overshoots caused by passing square waves into low-pass filters for modulation control, not to smash the audio into it to make it louder.

Back in the dark ages when I was CE at WMNF in Tampa, we had a minimalist approach to processing brought on by a tiny budget.. We had a gates peak limiter at the transmitter, and nothing else..

The station was the cleanest on the air in Tampa.. Mono, but clean.

The problem that made it sound junky at times: Phone lines. I fought with GTE (genital telephone and electronics, so called because when you asked for a "class A line", you had to hunt for hours before you could find someone that knew what it meant. One guy in Tampa, who was usually not at his desk..)

The line to the transmitter in Riverview went past tons of tv transmitters, and the end result was an ugly mishmash of horizontal sync audible in the audio when the weather was right.. A little moisture, and all heck would break lose.. There were times I threatened to drive it with a 100 watt amplifier to get their attention. Didn't happen, however...

They finally got a new studio location. GTE hit them for $10k to change the line from the original old house they were renting to the new location. Then they got a microwave, and got the sound cured once and for all. As far as I know, they are still paying $200 a month for the land line to the transmitter, since it had a 20 year contract.

sheesh.

Since then they've gotten an old Optimod, and are treating it gently, resulting in decent sound on the air.. at least it was last time I was down there.

Since I don't work in radio professionally and I'm just learning about
this business, I'd like to get this correct by repeating what I've
just learned in this forum using the simplest terms:

1. Major market radio stations that are *NOT* owned by a network but
are affiliates don't have to pay for ABC Radio News, any of the
Westwood One news offerings (CBS to CNN), Salem Radio News, or any
other top of the hour news content providers.

2. Smaller markets do not pay for the news either, but rather "barter"
for the content by broadcasting the news content from a provider a
certain number of times during a specified weekly schedule.

If these two statements are basically accurate, I would like to know how news content providers make money. It almost sounds like radio stations don't pay for these news briefs at all (almost like a public service).

My expectation was that a radio station would have contracts to pay ABC News a fee (that was determined by number of listeners, demographics, etc.) for broadcasting their news briefs. It sounds like it's much more complex than that and I'd like to understand why.

> >2) How long do these contracts last with Westwood One or Disney/ABC?

> What's his alternative? There can't be two "fair and balanced"
> stations in the same market. He'll have to figure a way to take FOX
> away from KVI.
>
> Rich

I don't care about the politics; I want to understand the business thinking in the radio industry:

--Two big radio stations in a top market are vying for a similar audience.
--Each station wants to differentiate itself by offering their large target audience content it wants.
--One station is losing business because it's audience does not derive value from "Content X" while the other station with "Content A" is gaining business.
--The station with "Content X" wouldn't win over listeners with "Content Y," "Content Z," or any of the similar offerings.
--Nothing can be gained by having two stations in one market with "Content A" but why wouldn't the losing station switch from "Content X" to "Content B" (especially since "Content B" isn't the same as "Content A" but more closely tracks with what their audience values)?

If a radio station received constant complaints about the network content and it was driving listeners to another station, why would the station want to keep its affiliation with a content provider that everyone hates? Some would say the network pays them too much to *not*

change but wouldn't it hurt the station's bottom line to stay affliated with a network everyone in town despised?

Thanks for all the information - it's been very helpful.

# 1025. Radio stations recording network radio newscasts

It's very complex. Barter networks take a number of commercial minutes each week from the station's inventory, collect all the audience figures and sell the results to advertisers. When they keep a handle on where those commercials run, they make a very healthy living.

There's a story that when Grant Tinker came to run NBC he was given a tour and asked his guide how much the stations paid NBC to run their programming. When the respectful laughter died down, Mr. Tinker was told the network paid the stations to run the stuff.

It's known as Comp. (compensation).

Many small market stations can't afford to pay cash for programming, so they give up some of their commercial inventory and run the network's commercials. In Talk Radio that can be as much as 50% of the available inventory in each hour of a show.

There are almost as many configurations as there are stations and it's a nightmare to administrate.

Rich

The "barter" is that they get the news content free in return for broadcasting the commercials, for which advertisers have paid the network.

>
>If these two statements are basically accurate, I would like to know
>how news content providers make money. It almost sounds like radio
>stations don't pay for these news briefs at all (almost like a public
>service).

With the exception of the AP Radio Network, which carries no commercials, the networks are paid by advertisers, just like stations are. APRN is alone among nets in being a cash-for-content deal, although even they are now stepping into the barter business, as fewer and fewer stations are willing to pay cash.

>
>My expectation was that a radio station would have contracts to pay
>ABC News a fee (that was determined by number of listeners,
>demographics, etc.) for broadcasting their news briefs. It sounds like
>it's much more complex than that and I'd like to understand why.

No, ABC charges its advertisers, based on the audience(s) that the affiliate stations deliver for the commercials.

The concept is not complicated. Networks are an efficient way for advertisers to get national coverage without having to contract

individually with hundreds of stations. The programming content supplied by the network (which may be entertainment programming or news) is provided in return for the stations airing the commercials. Larger stations get paid some money as well -- but generally far less than they would get for selling the same spot directly to an advertiser. The most extreme example I know of in this regard is my own employer, which was being paid $1 by ABC to run a spot we could charge $50 for locally (this was 20+ years ago). We dropped ABC in favor of APRN because it was cheaper for us to buy news than barter for it, and did not have a commercial network affiliation again until we bought another station and put a 24/7 ABC music format on it. It's a niche format we could never afford to do if we had to staff it ourselves, so this time it makes economic sense.

Beyond the awesome stupidity of doing such a thing they run the risk of running an out of date commercial (if they rerun the spots) and causing the advertiser much grief. The advertiser causes the agency grief. The agency caused the network grief and the network causes the station grief. This is all beyond the fact that the news is out of date. Any time you rerun a newscast you run the risk of passing on dangerous misinformation in addition to the dangerous misinformation that might have been in the newscast itself because sources weren't properly checked.

Very few network advertisers run dated spots because stations are allowed to run their weekly quota of spots ROS (Run of Schedule). The places where dated spots would be run are newscasts where the embedded spot must be run as it's fed. That's why rerunning a newscast can be dangerous for a station.

Those who do it simply don't care.

Rich

From: Andrew Dickens <none@noemail.com>
Message-ID: <c66hiq$gk1$1@xuxa.iecc.com>
Source record: 5374

Hi. We have a stereo (two channel) Marti STL-10 system.

A few weeks ago we started noticing noise, and we traced it to the STL link. One of our two STL transmitters was showing a low +13.5 voltage. We discovered this voltage was +13.5 when not transmitting and dropped to +9v when transmitting. We pulled the unit and swapped out the power supply and the symptoms disappeared.

BUT - while that unit was out we ran with our supposed good unit (normal meter readings). All of a sudden we started hearing significant noise on that channel.

Anyone have experience with noisy Marti units? Where should I search first? Transmitter or receiver? Noise sounds like HF clipping - all kind of distorted in the high end, almost like an echo on a long distance line. Unit is using 75usec pre emphasis and driven below 100% modulation.

-Andrew

So, you checked the positive regulator?

What sort of noise? Crackling? Hissing? Humming?

Is there ripple on the power supply output? If you swapped it with a power
supply that has been sitting on the shelf for years, I could see why a cap
might fail and produce a lot of hum.

>Unit is using 75usec pre emphasis and driven below 100% modulation.

HF clipping doesn't sound like noise. Are you talking about a noise problem
or a distortion problem?

A line echo does not sound like either noise or distortion.

Scott:

Thanks for your help. The regulator was good. We swapped it with a brand new one and it did not fix the voltage drop (13.5 down to 9). Replacing the power supply fixed it. The power supply that failed was the factory original. The replacement unit was pulled from our other STL transmitter.

The second unit - the one that exhibits noise has a constant white noise that can be heard during both quiet and loud periods. It also has a raspy high frequency distortion that you can hear, particularly when someone is talking.

It is not a line echo. But the sound is similar to a bad long distance connection, where you say something and hear a distorted version summed with it.

Right, but what was wrong with the power supply? Knowing what was wrong
with the power supply might tell you a lot about what is going on.

>The second unit - the one that exhibits noise has a constant white noise
>that can be heard during both quiet and loud periods. It also has a raspy
>high frequency distortion that you can hear, particularly when someone is

If you return the new power supply to the other transmitter, does the problem
follow the new supply?

Is the received signal strength on the receiver good? If you listen to
the signal with a scanner right in front of the transmitter, do you hear
the distortion on that as well?

If you're hearing a higher noise floor AND distortion, that makes me suspect
that the signal strength isn't high enough to get full quieting on the
receiver.

If you put a wattmeter on the transmitter output, are you seeing good
deflection? What if you use a dummy load?

Your first goal is to isolate the problem and make sure it really is the
transmitter and not the receiver. Your next goal is to make sure you are
getting full power output from the transmitter. If so, it's probably a
modulation issue.

>It is not a line echo. But the sound is similar to a bad long distance
>connection, where you say something and hear a distorted version summed with
>it.

Does it sound like fringe FM reception?

>who do this?

Most networks only care that their commercials be run as contracted.
The other terms of the contracts generally deal with where the
material can be used.

They want to know if you're simulcasting so they can claim the
additional audience. They want to be sure the material isn't
duplicated in the market. Other than running an out of date
commercial, the network is unlikely to penalize anyone unless it
causes them to appear to be out of date. Stations that rerun newscasts
are, generally, not worth bothering with.

Aside from being listened to for any historical value, be it a major story,
down to, "Hey, I used to work with that guy!", there is no value of re
running a newscast, especially given how many 'networks' run 5 minute
newscasts.

Then again, you might be listening to the AP all news network, which when we
ran it,
often used the same copy from a story in consecutive hours.

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EDT - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Some big news for all you fans of "Dude" by Beenie Man and Ms. Thing: The song has officially claimed the #1 position on the NYC Reggae Singles Chart for all songs entering the chart in 2003. It was believed that "Pon De River Pon De Bank" would have been the #1 song of 2003 until "Dude" started getting mainstream airplay and rode the NYC Chart for 36 + weeks. According to the chart, it is officially the 5th hottest selling single since 1990. I would like to say a BIG UP and Thank You to both TK Smith and Clinton Lindsay for their continued work with the chart!! Also, big ups to Richie Spice, keep it up bwoy!

Thanks to everyone for the continued support! ReggaeJams Radio is currently #47 on the list of over 400 + reggae stations at live365. Remember you can tune in from anywhere 24/7 (links are located below).

DISCLAIMER - This is not an "I like or hate Rush" post. It's just one of those little bits of broadcasting trivia (or would it be minutia) that I'd like to resolve, so I can get some sleep at night.

During a recent on-line gathering of kindred spirits, sitting around debating DJs, the following observation came up. Rush Limbaugh has used phrases such as "award winning" and "excellence in broadcasting" that go well back into his Rock and Roll DJ days. On the ReelRadio aircheck site, there is a 1974 tape of him using such lines back the Mid-70s.

In the 1974 KQV Pittsburgh aircheck, "Jeff Christie" actually says, "Some of you are wondering what award I have won, none other than the Marconi Award for Excellence in Broadcasting."

I know he (as "Rush") has several Marconis under his belt as part of his later syndicated talk radio personae. However, according to NAB, the Marconi Award program did not start until 1989. Rush started receiving his in the early 90s.

So, the enigma becomes, how was he able to talk about an award that did not even come into existence for 15 years? Was there another "Marconi" way back when? Did he perhaps invent the award as an "on-air goof" before the NAB even came up with the concept for real?

Any thoughts?

Just one of those little questions that drive radio nuts, even nuttier!

?^) Dave

Go with the flow. Much of what Rush claims is tongue-in-cheek. I can picture Marge and Joe from Dubuque visiting New York looking for the EIB Building. There isn't one. The closest would be 2 Penn Plaza at Madison Square Garden where his show originated in the early days. It also happens to be WABC's address.

The current EIB Building is a tasteful $30 million shack in Palm Beach, FL. If things don't go well with his drug problem, the EIB Building will be run and maintained by employees of John Ashcroft or the civil servants of Florida.

Always remember: Talk Radio is entertainment. Period. Truth and accuracy are not requirements. In fact, they often make the shows dull.

Rich

Can someone explain terms like the "air stream" or recommend a good web
site for the lay-folk like myself. I am interested in following
discussions like this, but I have no technical background in audio.

Thanks...Michael

>radio.

Please explain this statement. Many other shows have debuted on far more stations at their launch in the past few years. What definition of success are you using to make this statement??

The coverage of this "network" is way overblown by people who desperately hope it will work. Liberals at the television networks have given this thing tens of millions in free publicity, but the network itself is an utter joke.

Yes, they have XM and Sirius - that's a good start. Outside of that, they have weak stations in a few markets and they have already lost two affiliates in two big markets due to a contract dispute.

Air America will die when it runs out of money. If they have to keep paying for stations, that will be sooner rather than later.

Hi Jianhong, I found the cquam documents I have. The first is a Motorola IC advance information on the MC13020P AM stereo decoder chip. the second doc is by Motorola also, Questions and Answers for the consumer. I don't know if these will help, but to answer your question about separation of the received am stereo signal, the MC13020P chip claims 30 db channel separation, and at 100% modulation, the output distortion is typically 1.0 % THD. Other than that info, the IC spec sheet gives pinout info on the decoder chip, but no info about the transmitter end at all. Unfortunately, I have no info on the Motorola CQUAM stereo exciter.
Hope this helps,
Tom

It's been a long time, but I seem to recall, when I did KDKA's first stereo audio proof of performance (with Kahn's independent sideband system) that I got about 36 to 38dB separation....disappointing when compared to FM specs, but really good enough for automobiles, where most C-Quam radios were, anyway.

# 1055. For sale: Partial ownership of AM/FM station in Virginia.

Newsgroup: rec.radio.broadcasting
Date: 2004-04-27 14:29:20 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c6lqo0$o8v$1@xuxa.iecc.com>
Source record: 5396

For sale:

(The "Radio Crazy" is baaaaakkkkk!!(

Partial interest in AM/FM radio station located in
small Virginia college town.

This is a joint venture. There is an element of risk.
Active or inactive investors with at least $20,000
each are welcome. No individual can exceed 49 percent.
That means me too!

Total asking price of the station is $400,000. We can
probably get an SBA loan.

I am NOT a broker, agent, shill, owner or part owner.

References:

a)Parole officer....Mr. Larson E. Rapp, c/o Zing-Zing
prison, Ossingstink, New York 12345.

b)Trade reference.....Brazlian Bandit Airways, Oshkosh
airport, Oshkosh, WI. (You who are on the ball will
get the connection!) Purchased a one-way ticket to Rio
using all cash. Small and unmarked bills only. Don't
worry, I don't leave until I get your funds!

The sales includes the main building and the AM
tower/ground system, etc. The FM transmitter/tower
site is leased at $400.00/month. Both stations enjoy
24 hour licenses with full power at all times. AM is 1
KW and FM is class "A".

Tel: (478)741-1710 in Macon, GA

It's human nature to believe your own press. Once you get to a certain notoriety level you begin to believe the entire world revolves around your every word and you believe you have some influence over at least mildly intelligent people. It's all done with mirrors usually owned by the hosts.

Do you mean legal penalties? If you do, the answer is "none." In theory,
a station that broadcasts old, old news might run afoul of whatever's left
of the "licensed operate in the public, interest, convenience and necessity"
doctrine. I dunno: Is old news better or worse than no news at all?
Remember, radio stations are no longer obligated to broadcast _any_ news.
In the main, I don't think that radio is taken seriously by many as a
serious source for any than weather news. There are of course some stations
that are major exceptions. You may care. I don't. To each his own.

Cheers.

So I was told (I never actually visited the TX, where the unit allegedly
resided). Moreover, having heard a LOT of WABC during its glory days, I can
attest that the reverb was used quite sparingly, particularly by comparison
to some other stations of the time.

# 1060. Internet Radio Show schedules and stream links at RadioShowLinks.com

Newsgroup: rec.radio.broadcasting
Date: 2004-04-28 18:29:40 UTC
From: rsljfp <rsljfpNOSPAM@removethisyahoo.com>
Message-ID: <c6ot6k$l1o$1@xuxa.iecc.com>
Source record: 5400

We've just recently launched our directory of internet radio shows;
with "one click to play" stream links and schedule grids for some of
the more popular broadcast or internet webcast radio shows.

http://www.radioshowlinks.com/

A Directory of Internet Radio Shows and Stations; Listen Live or
On-Demand. The directory includes Schedules and Stream links for Talk
Radio, Current Events, Business, the Arts, and other programming.

For example, many popular NPR and other Public Radio shows are included
in the directory, including streams directly from National Public Radio
as well as webcasting internet radio stations from the NPR network.
For example, this channel has top National Public Radio shows:
http://www.radioshowlinks.com/display.aspx?id=72783

It's all free; no registration required. Please check it out and let
us know what you think about it and any suggestions you may have for
shows, or stations, that we should add to our Internet Radio guide.

Thanks.

John

Why can't we have just the pointers, without the cookies and spammers?

Your site says:

Note - You have not configured RadioShowLinks for your machine. If this
stream has problems playing please use the "Configure" command on the menu
above.

After clicking on 'Listen' your player should launch within seconds -
please wait. It can take up to 30 seconds sometimes for the sound to play -
please wait.

Why do I have to run your spammer to listen to radio shows you have nothing
to do with. Who gets PAID?

"Free" my ass......

# 1063. NEW YOUTH RADIO SHOW ON FM 102, PHNOM PENH, CAMBODIA

Newsgroup: rec.radio.broadcasting
Date: 2004-04-29 15:47:25 UTC
From: ostosmhong@everyday.com.kh
Message-ID: <c6r82d$qmr$1@xuxa.iecc.com>
Source record: 5254

PRESS RELEASE - 29 April 2004

NEW YOUTH RADIO SHOW ON FM 102

OS TOS MHONG! ("COOL!" in English) is the name of the exciting, new weekly call-in show for young people on Phnom Penh radio station "FM 102".

OS TOS MHONG! is broadcast live every Sunday from 0800 to 0900 on FM 102, starting Sunday 2 May 2004.

OS TOS MHONG! is a space where young people can voice their opinions and ask questions about the things that are important in their lives.

OS TOS MHONG! provides advice and information to young people on personal, health and education issues that interest them.

OS TOS MHONG! is presented by 24-year old Try Vannak and 22-year old Phorn Phasoka who share their own experiences as young people with their listeners.

OS TOS MHONG! has been created by the Women's Media Centre of Cambodia and is produced by their team of experienced radio staff.

OS TOS MHONG!'s production team explains: "The idea behind the show is to get young people talking about the things that matter most to them, including love, relationships and, of course, sex."

OS TOS MHONG! features an innovative mix of callers, information, advice, music and competitions. Each week, the show will focus on a particular topic.

OS TOS MHONG! encourages young people all over Cambodia to make contact, not only by phone during Sunday morning, but also by e-mail and letter.

OS TOS MHONG!
FM 102
SUNDAY
0800 – 0900

contact:
OS TOS MHONG!
FM 102
PO BOX 497
PHNOM PENH
CAMBODIA

Background:

Women's Media Centre of Cambodia is a Phnom Penh-based independent non-profit organisation that uses the media to promote social change in Cambodian society.

It was founded on International Women's Day in 1993 by five Cambodian women following the UN-sponsored national elections held that year. Over the last ten years, its impact on the general Cambodian population has been immense, despite existing in a part of Asia where freedom of the media is not guaranteed, and women's position in society is still far from equal. The stated goals of the Women's Media Centre are: 1) to raise awareness of social issues from the unique perspective of Cambodian women; 2) to improve the status of women by promoting socially conscious TV, radio and video programmes; 3) to increase women's participation in mainstream media. To this end, the Women's Media Centre: 1) produces weekly TV programmes from its own studio that are broadcast at peak times on Cambodia's three largest TV channels; 2) launched its own radio station "FM 102" in 1999 whose 10,000 watt FM signal reaches 60% of Cambodia's population with 16 hours per day of educational and socially informative programming; 3) employs a staff of more than 40 women at its purpose-built studio complex in Phnom Penh. Audience research commissioned by the Danish Institute for Human Rights in 2003 found "FM 102" to be the most listened to radio station in Cambodia, a testimony to the Women's Media Centre's success in producing programmes that touch the lives of ordinary people. The Centre has just been nominated for this year's One World Broadcasting Trust Special Award for Development Media.

sorry you didn't like it ...

the cookies are used simply to save your bandwidth and installed players ... that way we can give you the highest bandwidth stream for a player you have installed ... and for the banner ad tracking.

most people use the site to listen to shows, not stations. we've chosen to make the station directory also available. many shows are on many times during the day/week ... so a static url won't work ... so we dynamically create them since they are not durable.

and what's the spammer? google ads and banners ... no spyware, no pop up/unders, and no software installed on your machine. just google ads and cj banners. the streams play on wmp, real, and mp3 players users have chosen to install on their machines. i believe we are far less intrusive than other stream directories out there. the message to wait was put in when many reported stream failures, but it seemed that they just didn't wait for the stream to load into the player they have chosen to use. also, many stations stream silence during commercial breaks.

we collect, encode, and publish the schedules for the shows, and serve ads to pay for the server and bandwidth ... yes, we serve ads ... but there is no charge or registration ... we think that's free ...

as for Radio Berner Oberland ... i don't believe we've claimed to stream that station ... we simply give you a link to it.

again, sorry you did not find this site useful.

John

Al Kaada is invading normandy? the French are surrendering again?

sorry, i've never even heard of anyone rerunning net news over a day old before this. i was involved in taping net news following 9-11 so top of the hour news played at bottom of the hour (or thereabouts) on FM stations that didn't normally air net news.

we reciently had a starguide malfunction which resulted in a tape delayed program airing the some of same elements repeatedly. the contact closure "stuck" so automation never got the cue to start recording a new segment.

suppose some station records a cart called "news01" then their automation is set to play news01 once an hour during dayparts. then no one updates the cart for a few days. AND the cart is set to never expire. this would result in the kind of problem that's being discussed.

# 1071. Audio Snakes FS in NYC

Newsgroup: rec.radio.broadcasting

I have a variety of snakes for recording. These are high quality cable bundles perfect for stage or multitrack.
check out prices at sweetwater.com to see the quality of what these are...ProCo and switchcraft...
I'm selling these for about a third of what I paid..! Upper East Side location for pickup...

1. 10' RCA to 1/4" color coded 8 channels $35
2. 16' RCA to 1/4" switchcraft 12 channels $50
3. 10' 1/4" to 1/4" 8 channel (I have 3 of these) $35 each
4. 15' stereo Y Balanced to indiv. 4 stereo plugs to 8 singles ( I have 2 of these) $50
5 30" ProCo Snake for stage. 8 ch 1/4" to 1/4" female breakout box $50
6. 6' 1"4 to 1/4" 16 channels $40
7. 15' 1/4" to 1/4" 10 channels $40
8. HOSA 10' 1/4" to 1/4" 8 ch. color coded...this is the only cable without pro switchcraft or neutrik ends! $20

# 1072. DX tests Summary

Newsgroup: rec.radio.broadcasting
Date: 2004-04-30 14:51:02 UTC
From: ircamember@ircaonline.org
Message-ID: <c6tp4m$o0e$1@xuxa.iecc.com>
Source record: 5263
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

I'm not sure if this test is running tonight or not - this is probably about the end of this DX "season", but as long as there's a chance, and RI can be a difficult state to hear...
---
For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Daily, from 2:55am-3:05am EDT - WRIB-1220, Providence, RI - This test is scheduled to run "through at least April (2004) and possibly into May".

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Idiots who know nothing about sound or electronics get to run radio
stations, no news there. WKRP wasn't real life exagerated for comic
effect, it was real life dialed back to make it believable for the
viewing audience who had no idea about what life in real small to
medium market stations was like.

Wouldn't switching between program and air just show the difference
made by the post-board mix processing chain? Wouldn't proper head
cleaning and alignment make both sound better?

Amateur Radio Newsline(tm) Report 1394 - April 30, 2004

---

A Very Important Note: We urge all readers of this report to also download the audio version of this report at http://www.arnewsline.org/quincy and listen to it. Please pat special attention to the words of ARRL President Jim Haynie, W5JBP, and the urgency in his voice as he discusses the latest developments in the fight to keep Broadband Over Powerline technology from encroaching into the Amateur Service bands. There is no way to express in print the very grave nature of this situation. Only by listening for yourself can you truly understand the extreme gravity of the circumstances that our service faces if BPL is introduced nationwide.

The ARNewsline Production Team

---

Amateur Radio Newsline report number 1394 with a release date of Friday, April 30th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL takes on the White House over BPL, a power provider says BPL interference to mobile operations has to be tolerated and a ham radio name change. Its called the Dayton Hamvention once again. Find out the details on Amateur Radio Newsline report number 1394 coming your way right now.

(Billboard Cart Here)

THE BPL FIGHT: PRES BUSH VS. PRES HAYNIE AND THE ARRL

The ARRL and its president has expressed what they call deep concerns about a speach by United States President George Bush. One where where the leader of the free world says that standards need to be changed to encourage the delivery of Internet access using Broadband Over Poweline technology. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here with more:

--

In the boldest and most dramatic move yet in the BPL debate, the ARRL's president Jim Haynie W5JBP, directly appealed to President Bush to abandon his support for BPL technology.

Haynie says Bush's speech last week during the American Association of Community Colleges convention in Minneapolis prompted him to action. In

that speech, President Bush stated directly:

"...power lines can be used for broadband technology. So the technical standards need to be changed to encourage that."

"I faxed a letter to the White House cause I wanted to make sure they got it and we followed it up again with the regular U.S. Mail," Haynie says. "And, it'll be curious to see what kind of reaction that we get. I think, like I said, it's ill-advised.

"It's so much hype that the broadband industry has been putting out and I'm sorry to say it looks like the president has been suckered into it a little bit."

Haynie says amateur radio has reached a defining moment in its history and he is issuing a call to arms.

"This is the time that amateur radio is going to have to pull together and speak with one big voice," Haynie says. "And, on our website, we put the contact information and I want everybody to go there and look at it (www.arrl.org) and you can write the president, you can write your congressman, you can write your senators you can call 'em.

"Anything like that is helpful because amateur radio has been around for a lot of years and I'd hate to see it end based on a technology like this that any engineer worth their salt would be able to say, 'Well, this sounds fun but it's just not going to work.' "

Haynie says he wasn't blind-sided by President Bush's remarks, but has questions about his fellow Texan's true understanding of the issue.

"If you go back and read his speech he made in New Mexico, I think it was Albuquerque, he alluded to broadband then just as a general term," Haynie says. "Since that time, the actual term broadband over power line has come into his speech and I know he doesn't write his own speeches, other people do."

Haynie says its likely Bush administration advisers believe BPL is an issue that may have some mileage.

"This is an election year and anything that would seemingly stimulate the economy and create jobs is going to be a real political football and this has just got caught up in it," Haynie says.

Haynie says he is now working with the ARRL's Washington staff to arrange a personal meeting with President Bush to lay out the issue for him. And Haynie says he's hopeful that if Bush sees the damaging effect BPL has on radio spectrum - occupied not by just amateur radio - but police, fire, and government services - he may reconsider.

Haynie says he'll also go in with the findings of the National Telecommunications and Information Agency - the president's own advisory arm on radio frequency spectrum management - to make his case.

"When you get into the actual and engineering report, there's some good stuff there," Haynie says. "And I'm glad to see it. I'm also glad to see that they corroborated a lot of stuff that we said in our data.

"And, it gives us more credibility because NTIA has quoted ARRL in there a number of times in this report. But some of their measurements were even more - for lack of a better word - devastating to the industry than ours. They're talking as much as 200 meters. That's a long way!"
Haynie says BPL threatens the future of amateur radio as we know it and it's time to step up and be counted:

"I've been a ham for 32 years, 33 years or something like that and this is the worst, most difficult situation I've ever seen amateur radio in," Haynie says. "And I think whether you're interested in licensing restructuring or you're interested in somebody not identifying every 10 minutes on 75 meters or whatever the case, that all pales. It is insignificant to this particular issue.

"So we need to set all these differences aside in the amateur radio community and come together. This is the time."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Since before the first test installations went into operation, the ARRL has been warning the public about the potential for massive radio disruption to vital radio communications that BPL has the potential to cause. More information is on line daily at the ARRL website at http://www.arrl.org (ARNewsline(tm))

**

THE BPL FIGHT: NTIA RELEASES ITS BPL IMPACT REPORT

The National Telecommunications and Information Administration has issued its long-awaited report on the interference potential of Broadband over Power Lines. Despite a generally-glowing news release, the report itself identifies significant interference risks from BPL and concludes that the methods currently used for measuring BPL noise levels are inadequate and that more study is needed on such areas as ionospheric propagation of BPL signals.

The full report may be downloaded, either in full or chapter by chapter,from the NTIA website at http://www.ntia.doc.gov/new.html (CQ)

**

POWER PROBLEMS: INVESTIGATION INTO BLACKOUT FAULTS ENERGY COMPANIES

Power companies may be interested in reeping huge profits by selling high speed Internet access using BPL technology, but a report says that they disregarded voluntary rules that were intended to ensure the flow of electricity. This is what opened the way for last summer's blackout in

eight states and Canada, the report says.

The investigators who prepared the report say that there was a clear understanding long before the blackout last August that the Ohio region was highly vulnerable to power distribution grid instability. Ohio is where the problem began.

The report continues that had the situation been properly addressed, the cascading blackout that sped across states from Michigan to New York and into Canada probably would have been averted. In fact, investigators said that something as simple as shutting off 200 megawatts of power an hour prior to the blackout might have kept the problem from spreading.

This is the final report by investigators who looked into the cause of last summers electrical breakdown. They are urging Congress to impliment strict government standards to ward off future outages. (Published reports)

THE BPL FIGHT: NC POWER COMPANY MAKE INTERFERENCE CLAIMS

Meantime, a North Carolina power company says that the interference coming from its BPL system is not harmful to ham radio operations. As reported last week, Progress Energy claims it has solved almost all of the problems to the Amateur bands created by its test installation near the city of Raleigh. But local hams have a different view. Newsline's Gary Pearce, KN4AQ, takes an in-depth look at the claims being made by Progress Energy and what the ham radio community has to say:

--

The FCC has received its first reply from a BPL system operator to a complaint about BPL interference. Progress Energy, which operates three BPL trials near Raleigh, North Carolina, says that they are in full compliance with Part 15. Their letter attempts to set a mark for "harmful interference" to home stations, and makes a claim that BPL doesn't cause harmful interference to mobiles because they drive by so quickly.

When the Progress Energy trial began in January, Amperion, the equipment vendor, set the hardware up with signals on the overhead lines that covered the 10 and 12 meter ham bands, and most of the spectrum in between. The signals appear as a series of carriers, 1.1 kHz apart, covering 6 MHz of

spectrum for each 2000 feet of power line.

Hams complained to the FCC, and Amperion moved the spectrum used. They attempted to operate in spectrum between the 20 and 15-meter bands, with a notch blocking BPL signals across the 17-meter band. They missed the mark a little, with BPL signals starting at 14.3 MHz, 50 kHz inside the 20-meter band. And while the notch at 17 meters did reduce the signal strength, the BPL carriers were still audible, and might be heard by home stations for a block or two, if there were any hams living in the trial area_ but there are no hams living there.

In addition, the BPL signals don't end with a "brick wall" filter at the edge of their spectrum block. They trail off slowly. And those "fringe" signals were still falling inside several ham bands, again expected to be audible to a ham within a block or two of the power line.

After giving Amperion time to correct the apparent errors, hams complained again to the FCC. The result was a meeting between Raleigh hams and a Progress Energy engineer in the trial area on April 6th to review the complaint and the spectrum used. Bill Godwin, the Progress Energy engineer, had arranged to be able to talk to an Amperion technician to make adjustments to the spectrum used in real time - but, the technician was a no-show on the telephone.

On April 13th, hams checked the spectrum used again, and still no changes had been made.

On April 20th, Len Anthony, Regulatory Affairs attorney for Progress Energy, sent e-mail to the James Burtle, Chief of the FCC's Experimental Licensing Division, claiming that after moving the BPL signals off the ham bands, their system "is not causing any harmful interference and is in full compliance with the FCC's Part 15 rules."

Referring to the April 6th observation with Bill Godwin, Anthony says, "These tests revealed a small level of interference at the fringes of certain frequencies. Since that time, further modifications have been made to address this fringe interference. It is Progress Energy's position and interpretation of the FCC's rules with regard to `harmful interference' that any interference that may still exist is not `harmful' as that term is defined by the FCC's rules. This level of interference does not seriously degrade ham radio operation or transmissions or cause repeated interruptions. Importantly" he continues, "since Progress Energy can make modifications to completely eliminate any interference with fixed ham operators, the only impact of any kind upon ham operations is upon mobile operators."

As for mobiles, Anthony continues, "Given that any interference experienced by a mobile operator only occurs within close proximity to the BPL facilities, such interference would be very short lived. Thus, Progress Energy is not causing any harmful interference and is in full compliance with the FCC's Part 15 rules."

An observation of the trial area on April 21st, the day after the e-mail was sent to the FCC, revealed that there had been no changes to the spectrum used. The overhead line was still emitting a full-strength signal on the top 50 kHz of the 20 meter band; signals were still audible in the notch at 17 meters, and the "fringe" carriers were still encroaching on the bottom 50 kHz or so of the 15 meter band.

This is the first claim by a BPL operator that weak BPL signals do not create "harmful" interference by the FCC's definition, interference that "seriously degrades, obstructs or repeatedly interrupts a radiocommunication service." Ham operators, of course, routinely tune through quiet spectrum looking for weak signals, and a series of carriers one kHz apart covering the band might be considered to seriously degrade, obstruct or repeatedly interrupt that activity.

And a mobile driving 35 miles per hour along a BPL-carrying power line can be in the interference zone for a minute or more - and much longer in stop-and-go traffic, waiting at signal lights, or stopping in a driveway or parking lot.

Frank Lynch W4FAL, an ARRL Technical Specialist for North Carolina who has been concentrating on the Progress Energy BPL trial, says that he will be filing another complaint with the FCC, responding to the Progress Energy e-mail. He also says that hams are not opposed to BPL per se, just the interference it causes. And he notes that it should be easy to clear up interference in a small trial area. It's BPL signals buzzing around every power line in town that have him worried.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

Once the new interference complaint is filed it will be up to the FCC to investigate it and to take whatever action it deems necessary. (ARNewsline(tm), KN4AQ)

RADIO LAW: PETITION TO PROHIBIT BUSINESS COMMUNICATIONS ON FRS FAILS

A Petition for Rulemaking to prohibit daily business communications in the Family Radio Service has been dismissed by the Commission. Amateur RadioNewsline's Bruce Tennant, K6PZW, has more:

--

On August 22, 2002, the Industrial Telecommunciatons Association, Inc. -- or ITA -- filed a petition for rulemaking requesting that the Commission amend Section 95.401(b) of the Commission's Rules. This, to prohibit daily business communications on the Family Radio Service frequencies.

In making its case for the prohibition the ITA said that it was concerned about the unlicensed mix of business and personal users. The ITA said that

traditional businesses were using FRS units for daily business needs and thereby limiting the ability of others to engage in the personal communications that the Commission envisioned for FRS.

One of those challenging the ITA petition was the Personal Radio Steering Group. This is an advocacy group for General Mobile Radio Service users who share part of the spectrum with the Family Radio Service. According to the PRSG filing, the FCC specifically indicated in the Regulatory Flexibility Analysis for creating the Family Radio Service that small businesses may use the FRS to conduct their affairs. Also, while FRS congestion does exist in and near sports and recreational facilities, theme parks and shopping malls, little of this congestion is attributable to recurrent business or commercial communications.

Based on this and other information provided by the public, the FCC has concluded that day to day business communications is a valid use of the Family Radio Service. That this was intended in the Report and Order creating the service and that there is little merit to the Industrial Telecommunications Association rules change request.

Reporting for the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

In other words, it is okay to continue to use FRS channels for routine business as well as personal communications needs. The full story is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1035A1.doc (CGC, FCC)

ENFORCEMENT: OFFERING NON CERTIFIED CB'S FOR SALE BRINGS CITATION

The FCC has gone after yet another purveyor of non certified CB radio gear capable of operating in the ham radio bands. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The FCC's Altanta Office has issued a citation to Jim Norton, the owner of CB Sales and Service in Anniston, Alabama for the sale of non certified CB equipment. Noted in the citation were six different models of non certified exquoipent, five of which had been modified to transmit on Amateur frequencies."

--

The FCC alleges that an investigation by its Atlanta Office revealed that on March 11, 2004, Norton offered for sale at his retail store up to eight models of non-certified Citizens Band transceivers all bearing the Galaxy trade name. According to Commission's records, none of these devices have received an FCC equipment authorization which is required for Citizens Band transmitters marketed in the United States. CB Sales was charged with

violation of Section 302(b) of the Communications Act, and Section 2.803(a)(1) of the F-C-C's Rules. (FCC, RAIN)

BREAK 2

This is ham radio news for today's radio amateur. From Auckland, New Zealand and the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO: CA HAMS SUPPOERT MS WALK

Members of the Huntington Beach California Radio Amateur Civil Emergency Service supported the early morning 2004 MS Walk event on Sunday April 18th. The Huntington Beach volunteer radio operators were on hand at each rest stop along the five and 10 kilometer courses, to provide communications and assist state beach rangers and event management in case an emergency occurred.

There were over 1200 walkers on the beach path taking part in the fund raisuing event. Peter Shores, AD6TN, brought his communications van that is fully equipped with communications gear and emergency supplies. It served as a mobile command post. Another volunteer patrolled the entire course on bicycle.

The communications effort continued until about noon. There were no incidents or injuries reported during the event. (KH6WZ)

**

HAMVENTION NEWS : DARA RETURNS TO THE DAYTON HAMVENTION NAME

When thousands of hams return to Dayton, Ohio for Hamvention 2004, they will find that the "Dayton" has returned to the Hamvention. This, with word that the Dayton Amateur Radio Association which sponsors the yearly event has again remamed the gathering the Dayton Hamvention.

According to General Chairman Gary Des Combes, N8EMO, the change is in keeping with the Hamvention's 'going back to the future' theme. It also goes along with the pledge made to return Hamvention to its roots as the biggest and friendliest hometown hamfest, found anyplace in the world.

Des Combes says that for more than half a century the event has been known to the world, and to the world of Amateur Radio as the Dayton Hamvention. He says that Hamvention's ties are to the entire Dayton metropolitan area, to its economy and to the ham radio community of the region.

The 33rd annual Dayton Hamvention opens on Friday, May 14th and runs until Sunday 16th. During those three days the event is expected to draw about 25,000 people from around the world and bring millions of dollars of sales and business to the Dayton area. (Dayton Hamvention)

**

HAMVENTION NEWS: THE HAM RADIO TOWN MEETING

And since we are talking the Dayton Hamvention, let me take a moment to invite you to join our producer Bill Pasternak, WA6ITF, and an all-star group of guests as we take a trip through time to look at the "traditions" that have made Amateur Radio the great hobby and service that it is today. This, as we at Amateur Rasdio Newsline present the 6th annual Dayton Hamvention "Ham Radio Town Meeting."

This years topic is "IT'S MORE THAN RADIOS -- Keeping The Traditions of Amateur Radio Alive." Bill will be your host and moderator. Joining him will be a whose who group including our leynote speaker Bob Heil, K9EID, of Heil Sound Ltd. Other presenters include Radio School's Gordon West WB6NOA, Worldradio Magazine Editor Nancy Kott WZ8C, Producer/Director Dave Bell W6AQ, Philadelphia newsman Mark Abramowicz, NT3V, to name only a few. Also, if time permits, we will present a screening of the 1990 Icom produced motion picture titled "More Than Radios." This is the story of an "old time ham" who rather reluctantly becomes the Amateur Radio "Elmer" for a teenager thrust into his life on summer.

The festivities begin at 1 P.M. EDT on Saturday, May 15th in Hara Arena Meeting Room 3 and as usual we will have lots of door prizes. If you have the time, we promise you a most entertaining and illuminating two hours reliving the traditions of the hobby and learning that being a ham truly is a lot more than radios. (ARNewsline(tm))

HAM RADIO IN SPACE: CREW CHANGE ON THE ISS

For a time last week there were five astro-hams on board the International Space Station. This as Expedition 9 crew members Mike Fincke, KE5AIT, and Gennady Padalka, RN3DT, arrived at the space outpost on April 21st The trip was made to the Iss using a Russian built Soyuz launcher.

Making the voyage with them was European Space Agency explorer Andr, Kuipers, PI9ISS. The three joined Expedition 8 crew members Mike Foale, KB5UAC, and Sasha Kaleri, U8MIR, who along with Kuipers are on their way back to Earth as this newscast goes to air.

Kuipers may have only spent a bit more than a week on-orbit, but he wasted little time in getting on-the-air. PE1SCW in Deventer in the Netherlands reported hearing PI9ISS in QSO with PI9ESA at 7:50 hours UTC on Saturday May 24th. Bas says that Kuipers signal was very strong signal that was reading 40 db over S-9. A few minutes later Kuipers was in range of Francisco Costa, CT1EAT, in Beja, Portugal. He said that he heard PI9ISS in a scheduled ARISS QSO also at well over S-9.

During their six-month stay on the ISS, Russian Cosmonaut Padalka will serve as the ISS Commander while Fincke will be the science officer and flight engineer. Both are expected on the air before they return home in late October. (ARISS, VHF Reflector, published news reports)

**

HAM RADIO IN SPACE: K6DUE ISS OPERATING EVENT CERTIFICATES

Certificates for those who took part in the K6DUE International Space Station Commemorative Operating Event held earlier this year have been distributed to the international delegates at the ARISS Meeting in the Netherlands on March 26th and 27th. Those picking them up were to forward the certificates to their national Q-S-L distributors who would then distribute them locally.

ARISS International Chairman Frank Bauer, KA3HDO, says that approximately 130 hams will be receiving certificates. The event was held to honor the memory of the late Roy Neal, K6DUE who founded both the SAREX and ARISS programs. Neal, who also served as the Vice President of Amateur Radio Newsline and as a frequent news anchor passed away last August due to complications following heart valve replacement surgery. (ARISS, AMSAT BB)

WORLDBEAT: NEW ZEALAND TO ARGENTINA COMMEMORATIVE

ZL1AWW is working on plans for a commemorative station to celebrate the 80 th anniversary of the first New Zealand to South America two way contact. This, by Ivan O'Meara Z2AC and Carlos Braggio, RCB8.

The proposed date is May 22nd or 23rd. This original 10,300 kilometer Morse code conversation took place in 1924 and established a world distance record for two-way radio for that era. (GB2RS)

**

DX

In D-X, word that the Rodrigues Island 3B9C operation finally went QRT on Monday, April 12th. In their time on the air, the operators racked up a very impressive 153,000 QSO's. QSL this one as you were directed on the air. (OPDX)

**

THAT FINAL ITEM: THE NAB 2004 HAM RADIO RECEPTION

And finally, as most of you know, it was Heil Sound Limited hosted the National Association of Broadcasters ham radio reception on Wednesday night April 21st. It was literally a star studded event. Newsline's Bill Pasternak, WA6ITF, and his tape recorder were there:

--

When Bob Heil, K9EID, and his wife Sarah throw a party, everyone with a ham radio license shows up. And thats exactly the way it was on Wednesday, April 21st when Heil Sound Limited hosted the annual National Association of Broadcasters Ham Radio Reception at the Hilton Hotel in Las Vegas, Nevada. There was food music and lots of prizes. Some were even personalized:

--

Bob Heil Audio: Hear it at www.arnewsline.org

--

That was Bob Heil presenting only one of over a hundred prizes given out over the three hours of the gathering. We finally were able to corner Bob Heil and we asked him how this all came about:

--

Bob Heil Audio: Hear it at www.arnewsline.org

--

Somewhere between 800 to 900 radio amateurs attending the National Association of Broadcasters Convention literally had a hamfest of their own thanks to Bob and Sarah Heil. Thats up by an estimated 40% over past years. Sarah Heil says that for her husband, putting this reception together was a labor of love:

--

Sarah Heil Audio: Hear it at www.arnewsline.org

--

The 2004 NAB Ham Radio Reception sems to have set several records. More important -- a good time was had by all.

Reporting from near the Convention Center in Las Vegas, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

For those not aware, the annual Natrional Association of Broadcasters Convention in Las Vegas is the largest gathering of broadcasting and teleproduction professionals in the world. (ARNewsline (tm))

Here's a piece of minutia.

Yesterday, we were approached about leasing a subcarrier on a translator we own and operate.

Question...

Is it legal for a commercial translator to sell it's subcarriers for revenue? I don't see this addressed directly in the rules? Any thoughts?

Thanks

# 1080. For sale: Partial interest in AM/FM station in Virginia.

If anyone in the USA is looking for a car radio with AM stereo, check local wrecdking yards for the AM-FM cassette radios from Dodge-Chrysler-Plymoth vehicles in the 1985-1988 time frame.

I had an 88 Dodge Daytona that did AM stereo.

Don't know if any newer makes/models do AM stereo or not.

# 1083. No Excuses: Torture of Iraqi Prisoners (Talk Show)

Newsgroup: rec.radio.broadcasting
Date: 2004-05-02 16:00:53 UTC
From: kevinsmithshow2@yahoo.com
Message-ID: <c735vl$3i9$1@xuxa.iecc.com>
Source record: 5273

Former international police officer and international talk show host, Kevin Smith, takes on the issue the recent reports of Iraqi prisoners being tortured by members of the U.S. military. Seventeen service members have been suspended as a result of photos showing them torturing and humiliating Iraqi prisoners--photos that have hit the media in the Arab world.

"I do not know a single police officer in America who would condone that kind of behavior", says Kevin. "If they had done this in America, they would be in jail right now."

This is not a little thing. These guys are ciminals and should be punished immediately and severely asserts Smith. But he doesn't stop there. He goes on to take the Islamic world to task for their silence and inaction against their own terrorists.

As usual, Kevin Smith presents a sizzling hot, philosophically astute show in this special production being broadcast May 1 and May 2 at http://kevinsmithshow.com.

Absolutely.

The only restriction on subcarriers is injection levels, crosstalk to the main carrier and other technical considerations.

It used to be that the main carrier must be programmed when a subcarrier was in operation, but I think the FCC eliminated that requirement about 10 years or so ago. I don't think (but check with a good broadcast attorney) that there's even decency regulations imposed on subcarrier operations, since it won't be available to the general public.

For those stations who wouwld want to do a good thing, one might even consider giving a non-profit entity, like a local blind association, access to a subcarrier for a reading service and the like, and thus the in-kind contribution might be a no-cost writeoff of several thousand dollars a year (but again, talk with a good tax attorney). --

How you doing.

It's Phil in London, England.

I'm saving up for the next attack on the US radio market.

I have 15 FM systems to supply to Liberia (free flack jacket and AK47
given out at airport arrivals) if you've never heard of this African
country.

Also hoping to clinch a deal to supply and install a tall AM mast in the
Caribbean.

I ain't getting no radio station on credit next time round:-)

>carrier and other technical considerations.

It's not a subcarrier issue, it's a translator issue. Translators are not allowed to originate independant programming; they must directly repeat whatever the main broadcast transmitter is producing.

Does this local origination prohibition apply to subcarrier data as well, or just to the main channel?

>It used to be that the main carrier must be programmed when a subcarrier was

>or so ago. I don't think (but check with a good broadcast attorney) that
>there's even decency regulations imposed on subcarrier operations, since it
>won't be available to the general public.

Right. But the issue is the translator, not whether it's permitted to be broadcast on subcarrier. The question is can you broadcast it on a translator subcarrier without it being on the subcarrier of the main channel of license.

> Wouldn't switching between program and air just show the difference
> made by the post-board mix processing chain?

Absolutely! But we had bigger fish to fillet... the board, or more
accurately the way the board was configured and used, was a big part of
the problem. This was my introduction to the importance of proper gain
staging!

> Wouldn't proper head cleaning and alignment make both sound better?

That's what I thought... but when all the tape decks and cart machines
were set up they really made the rest of the system choke. And of course
once you start you're pretty much stuck, so we then tackled the console,
and once that was set up the difference between the output of the
console and the output from the transmitter was so dramatic...

So what are you asking? You answered your own question (or what moderator?
This is a moderated group?!??).

[ Moderator's note: Yes, that'd be me - Steve Sobol. The original poster
did not answer the question. ]

And there still is a role for A&R...it's what I'd consider to be the most
exciting job in the recording industry, excepting that I'd have to listen to
even more crap than what gets on the air now, just to find next year's
breakout act.

They license most of the music you hear, so it's a good place to start.

How much money you gots? You're gonna need it.

Digital Millenium Copyright Act is why Americans aren't broadcasting now.

As has already been noted, A&R stands for "Artists and Repetoire."

One of the most famous A&R men ever was John Hammond, Jr. He worked
for many, many years with Columbia Records and is credited with
"discovering" Billie Holiday, Aretha Franklin, Bob Dylan, Bruce
Springsteen and Stevie Ray Vaughn. Other famous A&R men include Ahmet
Ertegun, Sam Phillips and Mitch Miller:

So the stuff between the board and the xmtr was making the board
signal worse, but the board signal sucked so bad that the additional
suckage wasn't particularly noticable until you started improving the

source and then any improvements in the board signal just made the deliterious effects of the processing chain that much more noticable?

And more importantly, be excited about all that crap and be able to keep a straight face while talking to some radio programmer about said crap, and how that crap is going to be huge, and the real crap is what the other label is trying to push onto that radio programmer.

It's a soul-less job for which the term "record weasel" is interchangable with A&R Man.

Not quite the same job. Acknowledging that everyone's ultimately a flack, there's still a useful distinction between the recording industry's executive production managers (A&R men) and its line sales "consultants."

So, question. In the Simon & Garfunkel song where they say "I've been Lou Adler'ed, Barry Sadler'ed", are they referring to the NYC newscaster or to the A&R guy?

Jerome

I visited ASCAP to give him a feeling for what is required.... Assumed
"experimental".. No income. and about 25 streams...

Rate Schedule A
Sponsor Revenue $ 0
Adjustment to Sponsor Revenue $ 0 <for commissions to ad agencies>
Net Sponsor Revenue $ 0
User Revenue $ 0
Total Site/Service Revenue $ 0
Rate Based on Revenue .01615
Site/Service Sessions 25
Rate Based on Site/Service Sessions $ .00048
Sessions Based License Fee $ 0.01
Revenue Based License Fee $ 0.00
Minimum License Fee $ 264
License Fee Payable to ASCAP $ 264.00

So that is what you pay each month to service 25 total connections. Figure
it will be about that per month for BMI as well. Interestingly enough, that
is more than a classical station I recorded for paid each month, and they had
some serious ratings and profits. Then again, virtually everything they had
on the air was from the1700's and 1800's...

# 1103. legal aspect of internet radio

Newsgroup: rec.radio.broadcasting

Hello,
I'm thinking of creating an online radio program that would showcase music by independent, self-produced musicians; but I have a couple of legal questions I'd like to ask:

- How to protect myself against the possibility of someone sending me copyrighted music, not belonging to them, but pretending it does? It is obviously impossible to check that such or such song was not actually recorded or written by someone else...

- Is there a standard contract enabling an artist to allow a broadcaster to use their music free of charge (knowing in this case that the artist, through the promotion, is very much the beneficary, and knowing that the program itself is non-profit making)?

thank you

Guillaume.

Err.. Guaranteeing that so that you don't have to pay fees will be an interesting task. But then that's why Insurance gets sold. Getting covered for this type of liability might be a problem, of course. Are you prepared to lose your house and car if someone sues?

>- Is there a standard contract enabling an artist to allow a
>broadcaster to use their music free of charge (knowing in this case

If someone lifted someone else's music, a contract with the artist wouldn't protect you. And how much bandwidth are you preparing to buy? a T1 will support about 30 50kbps streams. Actually less since there is other overhead involved. They go for between $500 and $1800 a month, depending on which ISP and phone company you have and how far you are from the CO. Or you could go for a t3 (about 3 T1s) for about 90-100 streams that wide. Or if you want something a tad better sounding, cut those figures significantly.

ASCAP and BMI might still come after you looking for infringements. I cut a CD for a trombone quintet at a college north of Charlotte. They were going to use the recording as a fund raiser. It was all Black Spirituals, arranged for that group. Guess what they found after the fact. One of the pieces that they thought was public domain wasn't... They ended up paying rights after the fact big time.

Sometime when you're fooling around looking at the copyrights on music, go look up "Happy Birthday", sung illegally at every kid's birthday party.

"Happy Birthday" is copyrighted by AOL/Time-Warner. If that isn't hypocracy, nothing is....(c;

Wednesday, May 05, 2004

Confirming rumours circulating in the UK over the past few months, Luxembourg-based commercial broadcaster RTL Group has released a promotional DVD which sets out its strategy for using Digital Radio Mondiale (DRM). One of the options under consideration is reviving the English service, which ran until the early 90's on mediumwave 1440 kHz. A chart showing requested usage of longwave, mediumwave and shortwave for DRM indicates that RTL has requested a shortwave frequency covering the UK, while mediumwave and longwave are under consideration.

Other DRM expansion plans include a shortwave service for transcontinental/eastern Europe, a mediumwave service for Belgium and the Netherlands, and a fourth RTL network for France. RTL says it expects DRM consumer receivers to be shipping in quantity by the second half of 2005.

I've always assumed it was the A&R guy/record company exec/talent
manager. Considering that "A Simple Desultory Philippic" is a parody
of Dylan and a poke at the music industry, it would seem that he would
be the Lou Adler they're referring to.

A birthday party at a private home is not a "public performance" - and so
singing it (or any song) in your living room is NOT a copyright violation.
It's "fair use".

Well actually it's not about "streaming". I used the term
"radio" in a broad sense: the idea is to make MP3 files of the program
available on a website which also houses an internet lit mag. Would
that change anything re: rights and risks?

>

What happens if we sing it for little Billy at Chuck-E-Cheeze's pizza
parlour and video game ripoff emporium? That's PUBLIC! Does Chuck-E-
Cheeze have a license?

If you have Ryan's Steakhouses in your area, note that Ryan's employees
never sing it when they do the birthday greeting to the embarrassed party.
They have their own song....

Larry

True.. all depends on local regulations. Copyright varies to some extent from country to country, but the EU should be reasonably uniform.

> Well actually it's not about "streaming". I used the term
>"radio" in a broad sense: the idea is to make MP3 files of the program

No.. In the case of the rules here, a download is a stream. Requires significant logging and all that, so that you can pay the "right" amounts.. but never less than the minimum. <ouch>

>Guillaume.

Amen. That one mistake got patched up rather nicely, but it was a tad expensive..The recording was for a non-profit group. Had they done it all before production, it would have been a lot cheaper. (But the licensing folk have a minimum, which is well into the hundreds.) -- There were penalties for not pre-paying. Sheesh.

If you cross all your Ts and dot all your I's, you can probably get away with it. If the content can be edited before placing on the web site, you can remove anything that you can't prove isn't cleared for public performance. But if it is presented "LIVE" then you are at the mercy of the licensing folk and their ability to find a copyright somewhere that you stepped on.

Over here, the Harry Fox agency is always happy to talk to people that are creating content and making CDs.. (they are the publishing/clearing house for the music..) -- and of course, after it is produced, Ascap and BMI want to sink their teeth into it to "protect" the performer...

One thing I haven't heard mentioned yet is the international treaty whose
name I can't remember that says that a bunch of countries including the US
and several members of the European Union will honor each others' copyrights.

I don't find lying about consumer products and spreading medical
mis-information to be "entertaining".

If anyone is so uninformed as to ask, "what lies on the radio are you
talking about"- I'll be happy to bring my one hour tape-recording with
me and we can play it on your local radio station.

We can start with, "Styrofoam is bio-degradable" and "Secondhand
cigarette smoke and dioxin are not health hazards!"

You're probably right. While several of the song's name references come from outside the music industry, the name immediately preceding Adler's is Phil Spector.

(The news guy was probably better known in NYC. And, um, for a while some may have believed they were the *same* guy.)

Amateur Radio Newsline™ Report 1395 May 7, 2004

Amateur Radio Newsline report number 1395 with a release date of Friday, May 7, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC denies a request for more time to respond on BPL, the NTIA report on BPL explained and ham radio will honor the military. Find out the details on Amateur Radio Newsline report number 1395 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: FCC REFUSES TO EXTEND COMMENT CUTOFF ON BPL

The FCC has issued a ruling denying a request from the ARRL to extend the Commentary cutoff date on the introduction of BPL as outlined in ET Docket 04-37.

The ARRL had asked the Commission to extend the deadline for Comments and Reply Comments by 45 days in the Broadband over Power Line Notice of Proposed Rule Making. The League had argued that this would give it and others the time required for the National Telecommunications and Information Administration to conclude its study at BPL, issue an initial report and give commenters time to evaluate it.

In its April 30th release denying the request the FCC gave no overriding reason for turning it down. Instead the agency said that the now past May 3rd commentary cutoff date stands. It added that those wanting to address the issues raised in the NTIA report can do so during the Reply Comment period. That's open now and ends on June 1st. (ARNewsline(tm))

**

THE BPL FIGHT: NTIA RELEASES LONG AWAITED REPORT ON BPL

Meantime, as reported last week, the National Telecommunications and Information Administration has issued its long-awaited report on the interference potential of BPL. Amateur Radio Newsline's Mark Abramwicz, NT3V, is here with an in-depth look at the report and the affect it might of on the introduction of BPL technology:

--

The very title: "NTIA Report Lays Groundwork for Responsible Deployment of Broadband Over Power Lines" doesn't sound encouraging.

But like any package - or the glowing press release that accompanied it - the more than 100-page document contains so much more once you open it.

And, you don't have to go beyond the executive summary that accompanies the report to find the glowing praise by Acting NTIA Administrator Michael Gallagher in the press release is quickly muted. Muted by the facts and some disturbing interference problems the agency's own technical review identified.

CQ Magazine Editor Rich Moseson, W2VU, digested and analyzed the NTIA report and agreed to share his findings with the Amateur Radio Newsline audience.

"It is one of the first really objective looks at the real danger of interference caused by BPL," Moseson says. "As of objective as studies by the ARRL might be, they would be perceived as someone with a certain interest here.

"The NTIA is a federal agency and their engineering study should carry a lot of weight with the FCC."

Moseson says he identified five major conclusions. First, among them, that the methods currently used to measure noise levels and interference potential are not adequate, according to the NTIA. Essentially, he says, there's an underestimation of peak-field strength. And, peak field strength is the leading contributor to high-interference risks.

"As applied in current practice to BPL systems, Part 15 measurement guidelines do not address unique physical and electromagnetic characteristics of BPL-radiated emissions," Moseson says. "That's a quote. That's pretty significant that the Part 15 guidelines do not address the unique physical and electromagnetic characteristics of BPL emissions. So the measurement system being used is not right."

Second, he says the NTIA engineers said noise levels must be measured from power lines carrying BPL as well as the device that couples the signal to the power lines.

"What the NTIA is saying here is that you can be 100 feet down the street from the actual coupling device or up to 300 feet down the street and if the signal bumps into one of these corroded connecters or something, then, it's going to start radiating there," Moseson says. "And you have to measure all along the line as well as at the coupling device."

Third, Moseson says NTIA found interference to weak- or medium-strength signals is likely to affect aircraft operation and the navigational frequencies used by aircraft.

"Interference to aircraft reception of moderate to strong radio signals is likely to occur below 6 kilometers altitude - that's 20,000 feet - within 12 kilometer center of the BPL deployment," says

Moseson, quoting from the report. "Interference would likely occur to aircraft reception of weak to moderate signals within 40 miles of the center of the BPL deployment area."

NTIA's fourth major conclusion, according to Moseson, is that results of BPL tests and implementation in other countries has met with mixed results. And, in some cases, it has been shut down entirely. He cites an example:

"During an emergency exercise of the Austrian Red Cross in May 2003, communication was massively disturbed - that's their words - by BPL with interference levels exceeding the limits by a factor of 10,000," Moseson says.

The fifth NTIA conclusion identified by Moseson is the agency's desire to conduct more testing.

"They proposed some more stringent measurement standards and procedures along with some of the interference mitigation techniques that were mentioned in the FCC's Proposed Rulemaking and others that weren't," Moseson says. "But they're saying here that they're not even sure that those are going to work. They want to do more testing on them and report on it later in the year."

The bottom line: Will the FCC's commissioner take seriously the findings and red flags raised by the NTIA report?

"In this case, I'm not really sure because they seem to have made up their minds going into this as to what they were planning to do," Moseson says. "So, I am not as optimistic as I might be in other rulemaking proceedings."

So, how soon could the FCC act? Moseson says he wouldn't even begin to speculate.

"At this point the comment period is closed. Comments closed on May 3," Moseson says. "There's a two-week reply comment period. And, then it's up to the commission of what they're going to do and when they're going to do it.

"There is no requirement that the FCC issue a ruling in a given amount of time after the close of comments on a proceeding. So, they very well could wait until the NTIA issues its second report. And, I'm sure that it would be accepted into the record as coming from another federal agency."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The full report may be downloaded, either in full or chapter by chapter, from the NTIA website. Its in cyberspace at www.ntia.doc.gov/new.html (ARNewsline(tm))

RADIO LAW: LEGALIZING AMBER ALERTS ON THE HAM BANDS

Hams worried that they might get into trouble if they relay lost child or AMBER alerts on the air may soon have regulatory relief. This as wording in an omnibus 71-page, Notice of Proposed Rulemaking on a variety of ham radio issues issued in mid-April tackles the problem had on.

One of the proposals in the April 15th NPRM proposes to [illegible] and we quote: "clarify that amateur stations may at all times and on all channels … make transmissions … which may be instrumental in saving human life and property." In other words, if enacted as proposed, retransmitting AMBER Alerts and just about any other type of live saving communications would become legal under Federal law.

The proposal is part of FCC WT Docket 04-140. The Comment deadline is June 15th. (CQ)

RESCUE RADIO: YOUNG HAM TRIES TO GET AID FOR DROWNING VICTIM

A tragic story from the Great Smoky Mountains National Park near Townsend, Tennessee. That's where a youngster on a field trip drowned at Cades Cove while a classmate with a hand held 2 meter transceiver tried to get help to save him. Bill Pasternak, WA6ITF, reports:

--

It started about an hour after the group arrived at the campsite on Friday, April 30th. According to news reports, a group of people including the ill fated teen took to the water. In a short time, the victum, identified only as Chris found himself in trouble. Others tried to save him while teachers using cell phones tried to call for help.

When it was found that there was no cell phone coverage, another student, Jordan Webb, KI4AVG, said he would try ham radio. Jordan had brought along his two meter hand held radio. He found a near-by high location and called for help over the Knoxville area WB4GBI repeater. He was answered by Jim Bond, K6SPY, who notified Park Rangers. Unfortunately they didn't arrive in time to save the

victum, but because KI4AVG had the foresight to bring along his 2 meter talkie, his classmate's body was recovered within hours, instead of days.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, reporting.

--

Jordan Webb, KI4AVG is only thirteen year old and attends the Vine Middle School in Knoxville. He has been a ham for just about a year and serves as net control for the weekly Young Amateur Radio Net on the Radio Amateur Club of Knoxville W4BBB repeater. (K4PZT, KG4UJC, KG4YTT, WBIR.com)

**

ENFORCEMENT: NET INTERFERENCE FOUND

Authorities in the United Kingdom were quick to act when a propagation net became the target of a jammer. We have more in this report:

--

Listeners to the DK0WCY Solar Geomagnetic Information broadcast on 75 meters recently experienced interference from an unmodulated carrier on the channel. The interference, which appeared to be deliberate jamming, was reported by the DK0WCY team to the authorities in Germany who founf that the interference was coming from from the United Kingdom.

With support from the Radio Society of Great Britain's Amateur Radio Observation Service and other U-K hams, authorities traced the interference to an amateur station in the Chepstow area. The interference ceased abruptly at 0608UTC on the 25th of March. No explanation was given but it is assumed that government regulators took the station off the air.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

No word on who the jammer was or what punitive action will be taken by U-K telecommunications authorities. (GB2RS)

**

ENFORCEMENT: YOU BETTER STAY OFF THE RADIO

Back here in the U-S-A, the FCC says that a former ham who has been to jail for operating without a license is back on the air and still has no FCC authorization to be there. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "Richard A. Burton of Harbor City, California, has been sent a Warning Notice of unlicensed radio operation on 2 meters in the Los Angeles area. Mr. Burton has been convicted in 1984, 1990, 1993 and 2000 of unlicensed radio operation under Section 301 of the Communications Act of 1934, as ammernded, and has served time."

--

According to Duckworth, the Notice sent to Burton states that additional instances will lead to -- and we quote -- to the same result. The FCC has also designated for hearing a second General Mobile Radio Service application that Burton had filed with the agency. (FCC, RAIN)

**

ENFORCEMENT: CRANK CALL TO CUBA'S CASTRO LEADS TO $4000 FINE

The FCC says that a Florida radio station should be fined $4000. This, for permitting the hosts of the Morning High Jinks show placed a crank-called to Cuban President Fidel Castro and broadcast the recording.

As previously reported, Joe Ferrero and Enrique Santos of WXJD FM used snippets of an earlier prank call involving Venezuelan President Hugo Chavez get past a Castro receptionist and up the chain of command in a five-minute broadcast June 17th of last year. They then fed pleasantries to Castro before breaking in and calling him an assassin.

On April 28th the FCC concluded that the station should be forced to pay a fine for the broadcast. The agency rejected claims that a rule requiring people to be notified before their voices are used on the air does not apply to people in Cuba.

WXJD was given the usual 30 days to pay the fine or to file a further appeal. (Published reports)

**

RADIO RECORDS: XL TO UA ON 137 KHZ

Hams in New Zealand and Asiatic Russia have claimed a new world low-frequency distance record. ZM2E at Quartz Hill near Wellington and UA0LE near Vladivostok say that they completed a two-way contact the night of the 20th of March on 137.70kHz. The path length is estimated to be 10,311 kilometers or 6392 miles. (Q-News, GB2RS)

**

AWARDS: YCCC OFFERS SUBSIDY AWARD PROGRAM

The 400 member Yankee Clipper Contest Club has announced that it's First Annual DXpedition Award Program has been funded for the 2004 through 2005 contesting season. The purpose of the program is to encourage new as well as young amateurs to participate in

contesting.

As part of the award program, the Yankee Clipper group will award the winning applicant up to $1,500 to accompany a YCCC authorized Dxpedition and / or Contesting operation any where in the world for up to one week, to operate in one of the four major contests.

This a first time program for the club. The winner will be chosen and announced at the Boxboro Hamfest in August and there are some restrictions on who can apply. More information is on line at www.yccc.org or by e-mail to W1LLU@verizon.net (W1LLU)

**

THE SOCIAL CIRCUIT: MARC HAMFEST AND COMPUTER FAIR

Turning to the ham radio social scene, the Mid-Atlantic Amateur Radio Club will be presenting their annual Valley Forge Hamfest and Computer Fair, Sunday, July 11th. The venue is the Kimberton Pennsylvania Fire Company Fairgrounds on Route 113. Admission is $6.00 for hams. Unlicensed spouse and children of licensed amateur radio operator will be admitted free of charge. For additional hamfest information, please e-mail MARC at Hamfest-info@marc-radio.org. Information is also available on the club website at www.marc-radio.org. (Via e-mail)

**

HAMVENTION 2004: THE ARRL PUBLIC RELATIONS FORUM

The ARRL sponsored Public Relations Forum at the 2004 Dayton Hamvention will be held at 8:30 A-M on Sunday morning, May 16th. The venue is Meeting Room 1 at the Hara Arena and those planning it say that this will be a do not miss event for anyone interested in promoting the hobby.

What will be discussed you ask? Well the major items include public service, spectrum protection and of coarse Broadbnd Over Powerline internet access. The session will also explain how to tell the world outside the hobby about Amateur Radio and how to address our concerns to public officials and local media.

Again, that's Sunday, May 16th at 8:30 in the morning for the ARRL Public Relations Fourm at Hamvention 2004. We will see you there. (Dayton Hamvention(r))

**

HAMVENTION 2004: A NICE PLACE TO LAND

And if you are a private pilot planning to fly your own plane to next weeks Dayton Hamvention, the events planners have a tip for you. Consider landing and tie-down at Greene County Airport in the near-by town of Xenia.

That field is located just south of Route 35 approximately 7 miles east of Dayton and is the closest airport to downtown. Its also among the easiest to get in and out of using small aircraft. Fuel prices are reportedly some of the lowest in the area, and the facility is well kept and capable of handling quite a bit of traffic.

Green County is just one of many airports catering to pilots of small aircraft in the Dayton area. More information about it is on-line at www.gwaohio.co. (Dayton Hamvention(r))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH NEWSLINE: MORE THANK-YOU'S FROM N6TCQ

Ladies and gentlemen, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

Still playing "catch-up" for our supporters, in the month of July last year
we heard from:

The Raleigh, NC Amateur Radio Society, The Ohio-Kentucky-Indiana Amateur Radio Society, The Garland, TX ARC, Monthly contributor William Walters, WA2IBM, of San Jose, CA; Monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and Brad Berryhill, WA6JJB of Anaheim Hills

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at
www.arnewsline.org. That address will be repeated at the end of the newscast. I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: SPAM LOWERING LEGIT E-MAIL

Meantime, a recent survey finds that Americans are e-mailing less and trusting e-mail less because of the growing flood of junk messages. According to the Pew Internet and American Life Project, 29% of e-mail users have reduced their overall use of the medium while 63% of e-mail users say they are less trusting of e-mail overall because of spam. That's up from 52 percent in June of 2002. (Technology OnLibe)

**

HAM RADIO IN SPACE: SCIENTIST TO BE NEXT SPACE TOURIST

The next space tourist plans to spend his time on-orbit studying environmental issues. Gregory Olsen, the founder of Sensors Unlimited Inc. in Princeton, New Jersey says that he plans to bring along infrared sensors, which detect varying levels of heat, to analyze pollution in the Earth's atmosphere and the health of agricultural systems on the ground.

Olsen told a recent news conference that he hopes to inspire young people with his mission, and want to arrange a video teleconference with Trenton High School in New Jersey and a school at the Crow Indian Reservation in Montana.

The 58-year-old Olsen has hired Space Adventures to get him to the I-S-S. This is the same company that brokered the first space tourist trip of millionaire Dennis Tito's flight aboard a Russian spacecraft in 2001. Olson's eight-day voyage to Earth orbit is currently scheduled for April of 2005. As with all past space station visitors, Olson is expected to be trained in Amateur Radio and operation of the ham gear aboard the I-S-S as well. (Published reports)

**

WORLDBEAT: NEW RADIO RULES IN KENYA

Visiting hams now have a way to get on the air from Kenya. Ted Alleyne, 5Z4NU, the Chairman and Secretary of the Amateur Radio Society of Kenya sdays that that the Communications Commission of Kenya announced on April a new and more relaxed policy towards amateur radio licensing.

Until now it was "practically impossible" for most visitors to obtain an amateur radio license in Kenya. The previous stumbling blocks for reciprocal agreements, Security and Police vetting, have been dropped entirely. However, applicants' countries must have diplomatic relations with Kenya and 5Z4NU says that the ARSK will be happy to supply the new license application forms. (GB2RS)

**

WORLDBEAT - GERMANY: PROPAGATION STUDIES WEBSITE UPDATED

Volker Grassmann, DF5AI, says over the VHF Reflector that he recently updated his "Amateur Radio Propagation Studies" web site. Features now include a countdown for the 2004 sporadic E season, a discussion

of thunderstorm effects on the ionosphere, notes on the people behind VHF dxing and much, much more. The page is in cyberspace at www.df5ai.net. Volker says come over and spend some time at the site. (VHF Reflector)

**

DX

In D-X, word that GB5JCT is on the air from the fishing trawler Jacinta moored in Fleetwood dock in the UK. The trawler is now a museum dedicated to the fishing fleet that used to be based at Fleetwood. Over the Easter weekend the station was heard on 40 metros SSB and locally on 2 meter FM. (GB2RS)

Also, G3TMA, G3KHZ and IZ1CRR will activate a couple of Borneo's Islands on the Air during the next couple of weeks. If you work them QSL via G3KHZ. (GB2RS)

Lastly, GW3UOF will be active portable SV8 from Kavos, Corfu, in the Greek Isles through May 17th. Look for him on CW, SSB and various digital modes. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HONORING THE MILITARY

And finally this week, ham radio will be honoring those serving in the military. Jim Meachen, ZL2BHF, is here with the details:

--

Amateur Radio Military Appreciation Day will be held world-wide on Saturday, May 29th from approximately 10 a.m. to 7 p.m. Central U-S time. According to Emery McClendon, KB9IBW, this will be a day-long operation to talk to troops, and associated groups around the globe in appreciation of their service and personal sacrifice.

The main operating location will be from Johnny Appleseed Park and Wizards Memorial Stadium in Ft. Wayne, Indiana, using Emery's KB9IBW call sign. That station will be on from about 4 p.m. Central Daylight Time through the end of the Wizards game.

Planners say that they know of at least 25 military bases and club stations that will be operating the event. This includes stations in Iraq, Kuwait, and bases around the globe. More information on this event is in cyberspace at www.fortwaneradioclub.org

--

Again, the website for more information on Military Appreciation Day is www.fortwaneradioclub.org. (KB9IBW)

>Promoting one's own talk show through use of the LIE!

Promoting consumer products on the air by lying about their attributes-for profit.

Lying about medical matters- which, no doubt has caused listeners to get sick or even die!

That and a lot more- and I have it all on tape!

The FCC and FTC refuse to act.<

Yes...due to that pesky little annoyance known as the First Amendment...the same words that give you the right to waste our time bitching and moaning that you have a corner on truth.

Yawn.

There are two conventions...one, which the United States is signatory to, is the Geneva Copyright convention, and includes most of the rest of the world. There's another one which I can't quite recall (Pan-American?) and it occasionally happens that a copyright under one is ignored by entities controlled by the other.

UNESO apparently adminstrates the Geneva convention (and why this is a surprise, I can't say) but there's an Acrobat document which goes into some detail....

# 1127. For sale: Partial ownership of AM/FM station in small Virginia town.

Newsgroup: rec.radio.broadcasting
Date: 2004-05-08 17:43:28 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <c7j680$prt$1@xuxa.iecc.com>
Source record: 5317

For sale:

Partial interest in AM/FM station in nice small
Virginia college town.

Joint venture. Active or inactive investors desired
with at least $20,000 each. No investor (including
me)can hold over 49 percent. There is an element of
risk and you could lose all or part of your investment
(Legal disclaimer).

Full asking price is $400,000. Main building and land
is included. Tower land for AM is also included. FM
tower site is leased at $400.00/month.

Both stations have a 24 hour license.

I am a semi-retired radio engineer living in Macon,
GA.

I am NOT on parole or probation and I do NOT have a
one-way ticket to Rio on Brazilian Bandit Airways!
LOL!

Tel: (478)741-1710.

73,

Meyer Gottesman, W6GIV
aka "Radio Crazy"

About.com needs to do their homework. The hypoblurb states "these
stations are carrying the Air America lineup" implying that all shows
are being carried. I'm sure WJNO in West Palm hasn't dropped their
regular schedule to carry the Air America lineup.

All they're carrying is Randi Rhodes. Randi has been on WJNO for
years. Long before Air America was a glimmer in an investor's eye.

People need to understand that very few stations carry a network's
complete lineup. They cherry pick the shows they want from a variety
of networks or do their own local stuff.

Most of what's on WJNO comes from their own company's network. They're
owned by Clear Channel and the network is Premiere, also owned by
Clear Channel.

With the loss of Los Angeles and Chicago, I believe the only station
carrying the complete lineup is WLIB, New York, for which Air America
is paying a fortune. I would bet the Air America show most affiliated
is Al Franken who plunged a wooden stake into the network's heart by
announcing he's thinking about running for office. If he does, the
show goes away.

Actually, to push the discussion a bit further, I'd like your opinions about the following "Terms of use" of an MP3-hosting website, that enables artists to post their own music (I've deleted the name of the company). Beyond the "legalese", does this provide airtight legal protection in your view? In which case I would use something like this for my "radio program"...

X.com Music Terms & Conditions

POSTED AND EFFECTIVE • March 25, 2004

[...]
Submission Requirements

Submitting materials to the Service does not guarantee that we will include them in our music library or place it on X...com Music. For this reason, it is important that you become familiar with the Submission Requirements that we have developed to assist artists during the submission process.

Your content

By submitting material to the Service, you represent and warrant that:

* X... Networks, our customers and licensees shall not be required to make any payments with respect to material that you submit to our sites, including, but not limited to, payments to you, third parties, music publishers, mechanical rights agents, performance rights societies, persons who contributed to or appear in your materials, your licensors, unions or guilds;
* You have full right and power to enter into and perform under these Terms, and have secured all third-party consents, licenses and permissions necessary to enter into and perform under these Terms,
* The material that you submit to our sites does not contain "samples" of any third party's sound recording or musical composition and will not infringe on any third party's copyright, patent, trademark, trade secret or other proprietary rights, rights of publicity or privacy or moral rights;
* The material that you submit is not and will not violate any law, statute, ordinance or regulation;
* The material that you submit is not and will not be defamatory, trade libelous, pornographic or obscene, and
* You are at least eighteen years of age. By submitting sound recordings or musical compositions or other audio and/or audio-visual content to us, you grant us, our affiliates, and our business partners a worldwide, royalty-free, nonexclusive license to:

o publicly perform, publicly display, broadcast, encode, edit, alter, modify, reproduce, transmit, manufacture, distribute and synchronize with visual images your material, in whole or in part, alone or in compilation with content provided by third parties, through any medium now known or hereafter devised for the purpose of demonstrating, promoting or distributing your material, to users seeking to download or otherwise acquire it and/or (ii) storing the work in a remote database accessible by users;
o Make your material accessible as audio streams,
o Use any trademarks, service marks or trade names incorporated into your material and use the likeness of any individual whose performance or image is contained in your material.

[...]
Legal Policies and Notices

You hereby agree to indemnify, defend and hold X... Networks, and all of our officers, directors, owners, agents, information providers, affiliates and licensors (collectively, the "X...Parties") harmless from and against any and all liability, losses, costs and expenses (including attorneys' fees) incurred by any X...Party in connection with any claim arising out of (1) any use or alleged use of your account or password by any person, whether or not authorized by you, (2) any claim arising out of the material that you submit to the Service, including, but not limited to, claims for defamation, violation of rights of publicity and/or privacy, copyright infringement, trademark infringement and any claim or liability relating to the content, quality, or performance of materials that you submit to the Service. We reserve the right, at our own expense, to assume the exclusive defense and control of any matter otherwise subject to indemnification by you, and in such case, you agree to cooperate with our defense of such claim.

The listing, or absence of listing, of any document in the Service's search database does not imply any warranty or guarantee by us, for any companies, products, or services described in such documents. We disclaim any and all responsibility or liability for the accuracy, content, completeness, legality, reliability, or operability or availability of information or material displayed in the Service's search results. We disclaim any responsibility for the deletion, failure to store, mis-delivery, or untimely delivery of any information or material. We disclaim any responsibility for any harm resulting from downloading or accessing any information or material on the World Wide Web or Internet using search results from the Service.

WE DO NOT WARRANT THAT THE SERVICE WILL BE UNINTERRUPTED OR ERROR-FREE. IN ADDITION, WE DO NOT MAKE ANY WARRANTY AS TO THE RESULTS TO BE OBTAINED FROM USE OF THE SERVICE OR THE CONTENT. THE SERVICE AND THE CONTENT ARE DISTRIBUTED ON AN "AS IS, AS AVAILABLE" BASIS. ANY MATERIAL DOWNLOADED OR OTHERWISE OBTAINED THROUGH THE SERVICE IS DONE AT YOUR OWN DISCRETION AND RISK, AND YOU WILL BE SOLELY RESPONSIBLE

FOR ANY POTENTIAL DAMAGES TO YOUR COMPUTER SYSTEM OR LOSS OF DATA THAT RESULTS FROM THE DOWNLOAD OF ANY SUCH MATERIAL. WE DO NOT MAKE ANY WARRANTIES OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WITH RESPECT TO THE SERVICE, ANY CONTENT OR ANY PRODUCTS OR SERVICES SOLD THROUGH THE SERVICE. YOU EXPRESSLY AGREE THAT YOU WILL ASSUME THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE SERVICE AND THE ACCURACY OR COMPLETENESS OF ITS CONTENT.

WE SHALL NOT BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OF OR INABILITY TO USE THE SERVICE, EVEN IF WE HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

WE RESERVE THE RIGHT TO TERMINATE THE SERVICE AT ANY TIME WITHOUT NOTICE.

Any controversy or claim arising out of or relating to these Terms or our sites will be settled by binding arbitration in accordance with the commercial arbitration rules of the American Arbitration Association. Any such controversy or claim shall be arbitrated on an individual basis, and shall not be consolidated in any arbitration with any claim or controversy of any other party. The arbitration shall be conducted in X... and judgment on the arbitration award may be entered in any court having jurisdiction thereof. Either you or we may seek any interim or preliminary relief from a court of competent jurisdiction in X... necessary to protect the rights or property of you or X... Networks, Inc. (or its agents, suppliers, and subcontractors) pending the completion of arbitration.

Hello,

I'm in southwestern Riverside County -- Southern California -- and I get both KIIS-FM (102.7, Top-40, Los Angeles) and KFMB-FM (100.7, Hot-ish AC, San Diego).

I like -- and dislike -- both for various reasons. I can only tolerate about 50% KIIS's library and can't stand the morning programming, but its a strong signal and the music that they play & I like, I really like. I listen to KIIS when traveling to and from my dad's place in Long Beach.

I like KFMB's morning hosts and about 90% of their library, but outside of mornings they tend to talk more than I want to listen and they hang on to tracks way too long before moving new stuff into the rotation. Signal strength is slightly above so-so where I live, but I listen to them on my way in to school (30 miles closer to San Diego) 5 days a week and strength improves dramatically on my way in [In fact they're the only English-speaking non-country radio station I can [usually] hold on to for almost 100% of my commute due to the terain.

My question, though, is this: While flipping between KFMB and KIIS I've noticed on several occassions that the actual transmission from KIIS sounds much clearer, livelier, richer... just plain better; KFMB on the other hand and in comparison sounds... well, hold music was one of my first thoughts. It's muddy, lacks real rande definition and clarity and sounds like someone has their compressor wrenched up to 12 on a 1-10 scale.

As far as I know, both are using digital playback systems (as are most stations, right) but I don't know about the rest of the air chain for either of the stations. I personally -- with virtually no exp. with "real" radio -- would venture to guess based on the quality that KIIS is sending a digital feed to their transmitter vs. KFMB using [several?] analog link[s] in their STL.

For my own curiosity what is really the likely cause of this vast difference in quality?

Lincoln
Sophomore, Computer Science, CSU San Marcos

[BTW - If anyone has any tips to score a tour of either of these stations (or any stations in the LA or San Diego area from an engineering/behind-the-scenes perspective, I would be VERY interested]

Alright guys, that's enough. This thread is dead. No further posts to
the thread will be pushed through to the newsgroup/mailing list.

Different processing chains. Both stations are most likely compressed to
the hilt. One station is clearly better at it than the other, though.

>[BTW - If anyone has any tips to score a tour of either of these
>stations (or any stations in the LA or San Diego area from an
>engineering/behind-the-scenes perspective, I would be VERY interested]

Call up the station, ask to talk to the engineer, and ask for a tour.
They'll probably be quite delighted to do it, if they actually have a
staff engineer. It's so hard to get new people interested in the field
these days that interested young people are usually quite welcome.

You might not be allowed to look at the processing rack, though. In
a lot of places there are covers over some of the processing gear so
nobody can steal the processing secrets that make the stations sound
so awful...

Processing can have something to do with it, but another thought is that
the KIIS signal is stronger where you're driving and the radio remains
in full stereo while the KFMB signal being somewhat weaker is being
blended as car radios tend to do. There's too many variables to tell
for sure unless you can talk to the engineers at the stations involved.

I did with the DSP6000 on a TFT STL...make sure the rcvr is wide enough
to handle the B/W....otherwise you have RF level but poor or NO demod on
the DSP boxes....(Moseley's are wider in the IF to allow this)...
(Dave Chance at Moseley put me onto that!)
If you are careful with them, they work ok....just don't run PROCESSED
audio over them :) (light leveling is ok..but put the processor AFTER
the DSP boxes)

Always sort of felt that KIIS was as close to AM sounding as one could
tolerate on FM. Grainy high end, very little dynamic range, muddy
bass.
There are several nice ousnding station on FM in So Cal strating with
KTWV 94.7 and KLON 88.1 (no I am not pushing jazz!!!!!)

[ Moderator's Note: Is 94.7 running "the Wave" format? "Smooth jazz" isn't
real jazz; for that you want to go to what you're calling KLON. Those must
be old calls, because 88.1 is KKJZ at Cal State Long Beach. Now THAT's jazz...
ok, I guess my biases are showing :P ]

Air America PROGRAMMING of some sort is being carried on approximately 12 stations. This includes stations like WMNN/Minneapolis, only carrying Al Franken (and destined for Catholic programming later this month or so). It includes other stations only taking Franken and little else, like KCAA/Loma Linda, CA (San Bernardino)...which also added an hour of Randi Rhodes recently.

WCHL/Chapel Hill, NC carries only Franken and two hours of night show "The Majority Report".

And then there's the silliest claim of an "Air America affiliate" - WJNO/West Palm Beach, FL...a standard Clear Channel news/talker which is only carrying its former local afternoon driver, Ms. Rhodes. Listening to them online, you'll never hear the mention of the words "Air America". Her show sounds like it did before she went to New York City, and WJNO covers all Air America name mentions with their own local liners.

# 1154. 1010 WINS DRINKING GAME!!!!

Newsgroup: rec.radio.broadcasting

Anyone in the NYC area that's listened to 1010 WINS news radio could see how a drinking game based on that station might be fun:

2 shots everytime they say "You give us 22 minutes, we'll give you the world"
1 shot when they say "Traffic and weather together on the 10s"
3 shots for every "Breaking news" and its associated background music/effects
1 shot if they say the word "Koszciusko" during a traffic report
2 shots everytime a US Window Factory commercial airs (its VERY annoying)
1 shot for every commercial for a miracle cure for balding heads
1 shot for every time beep
3 shots for the Mayor's weekly speech
4 shots for a live speech from the President
Nighttime bonus: 1 shot every time they mention the GWB "lower level inbound is EZPASS only!"

You could probably get real drunk real quickly with this game. Feel free to post a reply with your additions!!!

# 1157. Opinion sought for Radio World posting

Newsgroup: rec.radio.broadcasting
Date: 2004-05-14 14:16:36 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <c82kc4$lmk$1@xuxa.iecc.com>
Source record: 5346

I get the Radio World Newsbytes Weekly Digest every week in my inbox, so a couple of weeks ago, I started posting it here on this newsgroup, with the idea that it might contain material that would be of interest to this group.

Now that I have posted it a few times, I've started having second thoughts about its appropriateness for this group. Its first strike is that it is long. Its second strike is that it is of commercial nature.

So I am asking this group to please let me know your thoughts. Do you read it? Do you find it appropriate? Should I continue to forward it to this newsgroup?

I have no stake, financial or otherwise, in Radio World. And it wouldn't hurt my feelings either way.

Thanks!

That needs further qualification. Did they mean 12 stations are carrying all programming from 6am to 11pm ET or that 12 stations are carrying one or more shows. There's a very big difference. I believe the latter is true. If WJNO, West Palm, appears as a fulltime affiliate it's inaccurate. WJNO only carries their long time local personality, Randi Rhodes.

The big problem is that those stations are in small markets and don't provide anywhere near the tonnage a network advertiser requires. The generally accepted requirement for network buys is coverage of 85% of the country.

As it is, spots scheduled to air on WLIB, New York, were, apparrently, run on the network in a show that suggested the President be assassinated. GM, HP and several other advertisers demanded their spots not air on Air America. It's appeared in many trade publications.

As Laura Schlessinger discovered during her gay bashing, major advertisers don't want to be associated with controversy. At ABC we used to distribute a list of shows our advertisers demanded that their spots NOT air within. All dealt with controversy of one kind or another.

>world"

If I were you I'd just buy several bottles and drink them. WINS, on a cume basis, is probably the most listened to station in the country. That slogan has been used almost since day one.

WINS is a "just the facts, ma'am" radio station. Those slogans are recognizable positioning statements that everyone in New York recognizes.

If you want radio news in New York you probably go to WINS out of sheer habit. They only break format for wall-to-wall coverage of major events, never for sports or infomercials. They're New York's crisis station. They have the radio news franchise wrapped up tight and WCBS is a distant second in news.

If I owned it I could deal with that.

No Air America show ever suggested the President be assassinated.

But keep passing around the lies, Rich. The buzz is bringing in advertising bucks, and as a startup, they can use all the help they can get.

The "lies" have been all over the trade press. Randi Rhodes allegely suggested George Bush be taken out in a boat and shot. That's what prompted the advertisers to request their spots not air on the network.

I'm sure she wasn't serious but mainstream advertisers shun controversy.

I'm curious how you know the "buzz" is bringing in advertisers. Unless you're an employee of the network or ad agencies who are placing buys, how would you know? Many spots on a new network are there to avoid using PSAs in every break.

With only one major market I doubt they're getting network buys. Even WLIB, New York, doesn't have the tonnage in the right demos to get bought. My guess is those were spots being run off from a buy aimed at the station's previous audience or as a combo buy with WBLS.

I think the archive their shows on the net. It allegedly happened last week.

Rich

Did you hear that program, Rich? I heard it. Rhodes was comparing W to
Fredo Corleone. You may recall that, in the Godfather, it was Fredo's
brother who killed him.

She never advocated anything.

> That's what prompted the advertisers to request their spots not air on the
> network.

Funny how GM (for the most widely-cited example) says otherwise, if one asks
them. They say they were prompted to pull their ads by the fact of the
change in format (they had bought WLIB to reach the Caribbean market), not by
the content of the new format.

Funny how Ford immediately started advertising THEIR certified used cars on
WLIB as soon as GM stopped advertising theirs...

> I think the archive their shows on the net.

Rich, I used to think you were so well-informed. Now, I begin to see
otherwise.

AA maintains no archives.

However, a fan of Randi Rhodes maintains a rolling two-week archive at
<http://www.randirhodesarchives.com/>.

Some companies will keep you on partial salary for the first 3-6-12 months
so that you can develop a client base. Eventually though it will be 100%
commission.

Here is the transcript... it sure sounds like Rich was right. And you are not.

Caller: One more question: Why don't the American people see that the entire Bush Family are crooks?

Randi: Well that would--

C: Neil, Jeb, George Senior Iran Contra, and and and now Dopey

R: And what was involved.. what do they have in common? All of these things?

C: It's all money.

R: They all stole. They stole from banks. They stole from Pakistani banks; they stole from American banks; they stole from small banks, big banks, neighborhood banks. They stole from MY bank. My bank was uh this Savings and Loan of Broward--

C: Yup

R: --and Jeb took care of that bank. Jeb actually bought a building that was uh you know took a mortgage on the building of four million dollars and then just you know said he couldnt pay the.. the the the uh the note you know the mortgage and the bank totally went belly up and the tax payers had to bail out that bank too. I mean--

C: They're theives; they're the Corleones and as you said--

R: They ARE the Corelones!

C: --and now we're down to Fredo.

R: Well I gotta find... Well right, we've got the Fredo of the family is the President of the United States! So uh why doesnt his father take him, or his brother, one of em, take him out for a little uh.. fishing

C: Yeah--

R: You know

C: --on a row boat

R: Yeah and let him say some Hail Marys

C: I'll bet Bush does have a little dingy

R: Yeah.. take him out and you know "Hail Mary, full of grace, God is with you-" [Randi makes the sound of a blast] ... Works for me.

C: Absolutely, thank you--

R: Thank you... I don't think you can say that anymore. I really don't. You will see. No Godfather references when it comes to the Bush family. Nope!

Oh, I don't doubt that Randi Rhodes hates Bush and his neocon buddies, and
with good reason. They've done a really good job of turning the world
against the US, in a very short time, and have needlessly turned Iraq into a
playground for the same terrorists they chased out of Afghanistan, and they
are preparing to scapegoat a bunch of enlisted kids for the result of
interrogation policies made by people at the top in the Pentagon.

But to see obvious lies about ANYONE spread by someone for whom I used to
have a modicum of respect, and who has obviously not made the slightest
effort to check out the facts for himself... that's really annoying.

# 1182. My angry Dr. Laura rant

Newsgroup: rec.radio.broadcasting

From: mindseye100@hotmail.com
Message-ID: <c8akkk$qup$1@xuxa.iecc.com>
Source record: 5220

Ok. Rant time.

I was listening to the Dr. Laura Schlessinger radio talk show the other day. Have you heard this? I freakin' love it. Gets me all riled up. People from all over North America call in (over 60,000 callers a day!) and ask her advice on their daily quandaries. The "Doctor" then hauls her ass up on top of her ivory tower of moral superiority, and proceeds to berate her devoted flock like they're 7 year old retards with shit filled diapers. Anyway, today she was fervently babbling about how "shacking up" and "having sex out of wedlock" is "the most disturbing thing there is". Uh.. even more disturbing than running over toddlers with a tractor? Even more disturbing than slowing slicing your genitals with a rusty razor? Even more dis...

Well, needless to say, Dr. Laura is a moronic hag. Have you seen this hypocrites un-doctored nude pictures on the net? It's 100% fun listening to her angrily rail against the people who make/use/sell porn while you jack off to a dozen pictures of her pale but perky tits and hairy pussy. It's really one of the most simple but pure pleasures a listener of her show will ever have in life. Especially that one with her legs spread wide open.

Perhaps Sacramento CA. journalist Anita Creamer put it best:
"She posed in pigtails, hands on hips. She smiled brightly for the camera, flirting and saucy and delighted, naked as the day she was born. We wouldn't bother to care if she weren't such a sanctimonious, mean spirited, god awful witch."

Man, when that shit hit the fan, I thought for sure Schlessinger was gonna finally disappear under some far off religious rock. Her first rather pathetic defense was to dishonestly claim they were "fakes". Then, after she lost her court case to have them suppressed, she got a big, fat, juicy painful lesson in humility after she went on the air to state that she found them "embarrassing". Eventually the source was revealed to be veteran Los Angeles radio broadcaster Bill Ballance, a man who was pivotal in getting Schlessinger her start in radio, and took the photos in 1978, while the pair of them were having an AFFAIR during Schlessinger's first marriage! Oh sweet irony, how I adore ye.

She's really no different than Rush Limbaugh, that fat hateful dope fiend. What the hell is with these right wing religious nuts? They judge, condemn, and preach, and then take part in sins just as bad or worse than those that they were pissing and moaning about in the first place. How about the 237 Pedophile priests in Boston up on 45 million dollars worth of rape and molestation charges? Christ, I rest my case.

Wait.... I don't wanna rest my case. I'm having waaaay too much fun ranting about Dr. Laura. I remember one of her callers asking if she should let her 9 year old kid attend a coed sleepover party. Now, this prudish, ignorant radio host could have said something like "that would not be practical or appropriate" or some concerned parental bullshit, but instead the insane harpy flew off the handle and accused the parents who were throwing the party of "living out their sexual fantasies through their children". -snort-

Another classy moment from a show I heard last year was when she claimed that society can't allow gay people - or as she horrifically calls them: "biological errors" - to get legally married, because "a legal precedent would be set" and we'd then have to "allow people who have sex with their parents to get married to one another" (?!?) That shit is just crazy enough to be hilarious. Mind you, her homophobic comments were determined to be in violation of the human rights provision of the Canadian Broadcasting Code of Ethics, and she lost the majority of her stations in Canada. Ha ha. Luckily, C-Fun 1410 am here in Vancouver continues the weekday afternoon "family values" insanity.

The important thing to remember kids, is that Laura Schlessinger is neither a medical doctor nor accredited in a discipline one would traditionally look to for the generation of expertise in moral, societal, or spiritual matters. She's just a lying hypocritical fuckface with a radio show.

Perverts: The Doctor Laura porn is here. Have fun!

>

Here in the UK it's common for someone in sales to at least start on
commission for say 3 months to prove themselves then, once established
can negotiate basic plus commission.

Here you'd get a car after a probationary period and our health care, as
you may know is free.

I don't think sales would get a company car in the US but hopefully
you'd get medical cover!

Why do radio stations advertise for sales representatives on a fairly
regular basis? How hard would a time salesman work if he had a decent income
outside of commissions?

The commission rate varies by market and station. There -may- be a draw
available, but most sales folk work strictly on commissions, at least at the
stations I've worked at.

One of the stations paid somewhere around a 20% commission on a sale. If you
sold $15,000 worth in one week, that made for a nice check. If you sold $500,
it made for a really skimpy way to live. If you sold nothing, you got either
a few hundred as a draw against future commissions, or nothing. Many of the
people getting into that business have a real small income for quite a while
until they got established.

Forwarded with Alan's permission. I actually think this is an excellent idea. I did last time, too. :)

Technically, this is a No - the Yes votes are still leading 2-1.

Good morning, Steve.

I missed the original post on this topic... it looks like the issue is the posting to Airwaves of the lengthy RW weekly email.

If this is correct, it's a replay of the issue I brought up in January.

I vote to allow a brief post with a link to where the info is (or a subscribe link in this case, since it's receivable as an opt-in); those who are interested can click along to the details or subscribe. A few headlines or the like to provide an idea of the content us cool. But not the whole thing like the recurring Ham show script and WCBN playlists. Those posters should do the same courteous thing.

(If this isn't the issue, never mind.)

/A

Not very hard.

That doesn't make sense. Why would a trade magazine have any interest in seeing Air America fail? With all the consolidation they welcome as many new advertisers as they can find. I know the publishers of nearly ever trade magazine. None I've talked to want to see them fail. What you seem to be mistaking for hope for failure is accurate reporting on the actions of the network.

I have no interest in seeing them fail. I'm simply commenting on what I see as incompetence.
